PENNSYLVANIA FARMER

AGRICULTURE
THE KEYSTONE OF
NATIONAL PROSPERITY

PUBLISHED WEEKLY

(Pittsburgh Market Edition)

PHILADELPHIA, PA., SATURDAY, JANUARY 3, 1925

N.J. Agr.

The total value of farm products in the United States was thirty per cent higher in 1924 than in 1921. Present conditions indicate a further advance in 1925. See page three.

Pennsylvania's Farm Products Show

Plans Are Being Made for Bigger and Better Exhibits Than Ever

WITH 110,000 square feet of floor space available, 30,000 feet more than in any previous year, the Ninth Annual State Farm Products Show at Harrisburg, January 19-23 will be larger in practically all departments than last year. The greatest expansion will be in the potato, poultry and egg exhibits. At least 1000 dozen eggs are expected in the egg show.

Swine will feature the livestock show. At least 150 head will be entered and an entire building will be given over to them. Many of the hogs displayed will be closely related to the Pennsylvania premium winners at the recent International Livestock Exposition in Chicago.

Reports from many counties indicate a record number of entries in the county classes of the various exhibits. Such classes are provided in the fruit, potato, egg, wool, corn, and small grain exhibits and each year there is keen competition among the counties making entries.

Where Exhibits Will Be Found

The location of the various exhibits has been announced by Manager H. E. Klugh as follows: Poultry and eggs, Chestnut Street Market House; dairy products, potatoes, tobacco, apiary products and fruit, Emerson-Brantingham Building; swine, Harrisburg Duco Company, Moto-Mart Building, 38 North Cameron Street; wool, small grain and state educational exhibits, Rendezvous Ballroom, Fourth and Chestnut Streets.

Prof. H. D. Munroe, poultry specialist, Pennsylvania State College, who is in charge of the poultry and egg exhibits, reports more interest in the state show among Keystone flock owners this year than ever before. With prospects for at least 12,000 eggs on display, the show will establish a national, if not a world's record for size, he states.

Awards for Winners in Egg Classes

The egg exhibits will be housed in the Chestnut Street Market House this year. The judges will be R. W. Hawley, Carlisle, Pennsylvania; E. J. Lawless, Jr., State Department of Agriculture, and Prof. R. Brightman, Pennsylvania State College.

Seven attractive cups and $650 in prize money are being offered to winners in the egg classes. The seven cups will be given as follows: To the poultry club or association having the best display; to the school having the largest and best display; to the exhibitor of the best dozen white eggs; to the exhibitor of the best dozen brown eggs; to the winners of first, second and third places for the largest and best county displays.

Approximately 150 speakers, fifteen or more from outside the state, will appear on the programs of the twenty-five farm organizations holding their annual meetings in Harrisburg, during the week of the show.

Among the organizations which are co-operating in putting on the show and which will convene at that time are the State Horticultural Association of Pennsylvania, State Vegetable Growers' Association, Pennsylvania Society of Farm Women, Pennsylvania Breeders' and Dairymen's Association, Pennsylvania Potato Growers' Association, Pennsylvania Tobacco Growers' Association, State Beekeepers' Association, Pennsylvania Farm Bureau Federation, Pennsylvania Farmers' Co-operative Federation, State Veterinary-Medical Association, Pennsylvania Threshermen's and Farmers' Protective Association, and eight swine and dairy breeders' associations.

More Meetings Than Ever Scheduled

The State Council of Agricultural Associations will meet during show week and the Agricultural Commission will also hold a final two-day hearing at that time. This hearing will be on Wednesday and Thursday, January 21 and 22 in the Senate Chamber. Individuals will be heard the first day and representatives of farm organizations the second day.

The meetings this year represent the largest number ever held in connection with the State Farm Products Show.

A booklet giving the time, place and program of each organization meeting is being printed and will be distributed by the Pennsylvania Department of Agriculture.

Is Anything the Matter with Your Herd?

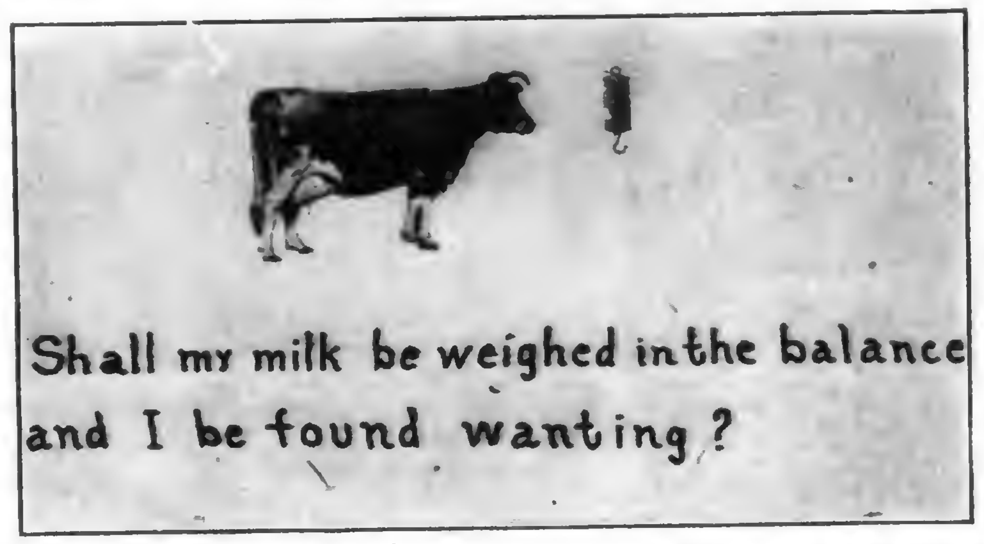
Milk Scales Prove Helpful to the Man Seeking Success in the Dairy Game

By A. A. BORLAND

Staff Contributor and Adviser

A SET of milk scales is one of the greatest money savers to be found on a dairy farm. The close margin between the cost of producing milk and its selling price makes accurate information about the production of each cow in the herd a necessity if the balance is to be found on the right side of the ledger at the close of the year.

Cow testing associations, in which a number of dairymen co-operate in hiring a man to come to each dairyman's farm one day a month and keep a record of the milk produced and feed eaten by each cow in the herd, are doing a splendid work in Pennsylvania. However, if a farmer is so situated that it is not possible to belong to a cow testing association, he can go a long way in detecting for himself the unprofitable cows in his herd. This may be done by simply using milk scales to weigh each milking from the different cows in his herd.



Shall my milk be weighed in the balance
and I be found wanting?

Keep Record of Each Individual

To make a complete record it would be desirable to test the milk from each cow once a month and keep a record of the feed eaten, but since cows vary more in the amount of milk produced than they do in the richness of the milk and the feed consumed, the first and most important factor in determining which are the best cows in the herd is to have a record of the milk production of each individual in the herd.

How surprised the owner himself often is to find that a cow he thought to be only ordinary proves to be a high yielder. Some cows that do not make a very big showing at the beginning of the lactation period may be found to be persistent milkers that stand dry only a comparatively short time and thus produce more during the year than others that made a more spectacular beginning.

An instance of this was "Minnie," a cow in the Greenville, Pennsylvania, testing association that was thought by her owner at the beginning of the year to be one of the poorest cows in the herd. Minnie did not yield a very large amount of milk daily but was such a persistent milker that at the end of the year she was found to be not only the best cow in her owner's herd but the best cow in the whole association, including nearly three hundred cows.

The daily use of the milk scales, with the accurate record of milk production thus secured, also provides a basis for economical feeding. It has been found that usually one pound of grain for every four to four and one-half pounds of milk produced, is a fair allowance of grain for a Holstein, Ayrshire or Brown Swiss Cow. One pound of grain for every three to three and a half pounds of milk usually meets fairly well the requirements of a Jersey or Guernsey cow. In addition the cows should receive all the good clover or alfalfa hay, and corn silage they will eat up clean two or three times daily.

Allowing the same amount of grain to every cow in the herd regardless of how much milk she is producing is a wasteful method of feeding grain. More milk would be produced if the same amount of grain were distributed among the cows in proportion to their milk production. The milk scales thus give the information that enables the dairyman to feed most economically.

"What's the matter with Brindle? She gave twenty pounds of milk yesterday morning and only twelve pounds this morning."

Remarks similar to this may be heard in the stable where every milking for each cow is regularly weighed. The milk record sheet may thus warn the dairyman of the approaching illness of some cow. He is enabled to take the case in hand promptly before the cow gets entirely off feed and may save many hours of trouble and considerable expense. The milk scales are a good barometer to indicate the health of the herd.

All Are Interested in Results

"Hey, Bill! My string of cows are holding up in milk better than yours." This is another stable comment often heard where the milk scales are in use. The comment itself gives information that is valuable to the owner. The milk scales and record keep up the interest of the milkers. Especially is this the case where a small prize is offered to the milker whose cows show the least percentage of decrease in milk flow for a given period of time. The owner can also determine the most competent milkers and arrange the work so as to get the best results from his hired help. In some cases competition between Dad and the boys has shown who it is that can keep the cows coming along at the best pace in milk production. This all adds a lot of interest to the dairy game and should be credited to the account of the milk scales.

It will surprise you if you have never tried it, what a little bit of time it takes to weigh and record the milk from each cow. The results are so outstanding that every dairyman in Pennsylvania should be reaping the benefits. The circular dial scales graduated in pounds and tenths of pounds are the most convenient. They usually have two indicators, one of which may be set at zero after the pail is on the scales. This indicator will thus register the exact weight of the milk when the pail with milk is weighed. Milk scales usually come in thirty-pound or sixty-pound sizes and are handy for weighing other things beside milk. You can get them from any dairy supply house. The price ranges from $5.00 to $7.00 according to the size of the scales. Milk record sheets for recording the weight of milk may be obtained free of cost by writing to the Agricultural Experiment Station, State College, Pa.

"Higher Up" is a good motto for the coming year, and one of the best ways for a dairyman to make advancement is to have exact knowledge concerning the milk production of each of his cows. This will enable him to weed out the low producers, feed more economically, watch more closely the health of his herd, and take a greater interest in his work. Surely the benefits to be derived from the daily use of the milk scales are such that every dairyman can properly resolve to start the new year with a set of milk scales.

Allegheny Dairymen Meet

MEMBERS of the Allegheny County Cow Testing Association held an interesting dairy meeting in the Upper St. Clair Grange Hall at Clifton on December 17. E. B. Fitts, head of dairy extension, in discussing economy of milk production, stated that nearly one-half of the cows in Allegheny County could be sold and the same amount of milk could be secured from the remaining number if each cow gave as much milk as the average for all cows in cow testing associations.—B.

The Farm Business Outlook for 1925

We Cannot Expect Boom Times But Conditions Indicate Continued Improvement

By GILBERT GUSLER

FARMERS can face 1925 with optimism born of reason. The new year does not promise to usher in an era of boundless prosperity for agriculture, but the rewards of farming have a good chance of exceeding those in 1924. This is a continuation of the trend of the last few years, as agricultural output has gained in value each consecutive year since 1921. In 1924, the increase over the low year amounted to thirty per cent.

The problems growing out of high wages, interest on heavy real estate debt, high taxes, and high freight rates will continue. Farming will still be "A hard way to make an honest living," or "An honest way to make a hard living," whichever one chooses to call it.

For all that, farmers will be able to enjoy more of the good things of life than for several years. Their gradual comeback since 1921 has represented a period of liquidation of pressing bank debts. More of the income in 1925 will be left for long neglected repairs, new buildings and other improvements to the farmstead, new machinery, and for raising the standard of farm living. The different branches of agriculture will be closer to a common level of profit than for several years, because of the adjustments that have been, or are being made between various enterprises on the farm. A notable decline in the number of farm bankruptcies is one of the strong probabilities of the year.

Reasons for Optimism

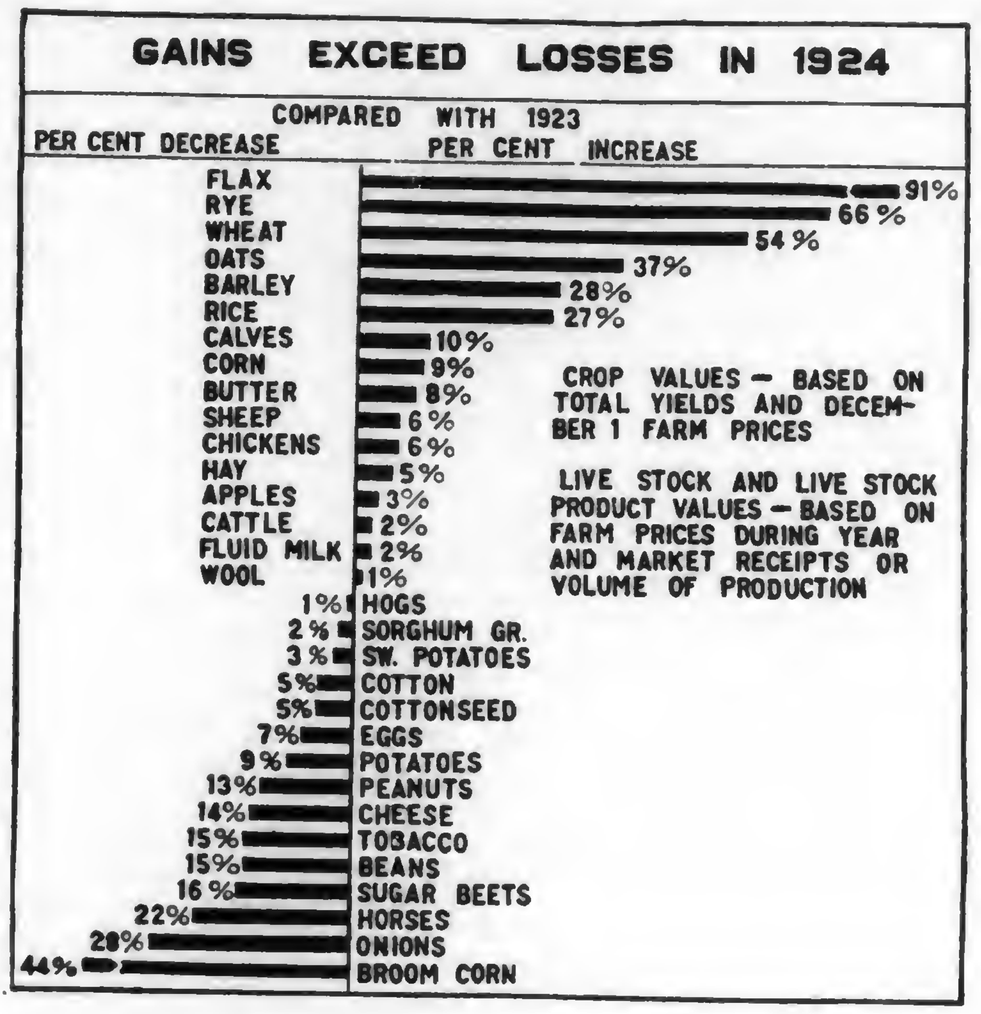
Grounds for the conclusion that 1925 will increase the measure of farm prosperity may be summarized as follows:

1. A larger physical volume of foods and clothing will be required for domestic consumption than in 1924.

2. While there will be some variation, as between different products, foreign demand for our surpluses, and foreign ability to pay for them, will be greater than in 1924.

3. Domestic production of foods and fibers will be but little, if any, greater than in 1924.

4. While the price of farm machinery, and some other commodities which farmers buy, will be lower, production costs will not be much different from 1924 and they may average slightly higher for the year as a whole.



Opinions as to the immediate future of business are probably more unanimous than for several years. Practically all the business analysts, financiers and industrial leaders are of the opinion that expanding activity will be the rule in the first half of 1925. Some business men go so far as to say that the next two years will be one of the greatest boom periods known to this generation.

The Brookmire Service looks for "improving business conditions thru at least the first half of 1925. Reduced stocks of goods, volume of distribution greater than current production, easy credit conditions, increased farm purchasing-power, improved foreign relations, reflected in heavier exports, and a more optimistic feeling toward future business are some of the factors that make the outlook for the next six months one of continued expansion in activity and prices."

The Harvard Committee says, "Agricultural prices have risen almost to the level of prices in general, and the general European situation is better than at any time since the war. The prospect in the United States during the first half of 1925 is for general business improvement."

Babson considers the outlook "moderately optimistic" with the post-war readjustment period far advanced and most conditions fundamentally favorable. Moody is hopeful for the entire year and finds "definite tangible indications that the present period of business expansion should run into the spring of 1926."

There is an ample foundation on which a big business year in 1925 could be erected. The gain in farm buying power itself will be a factor of consequence. Building, fencing and repairs on the farm have been neglected and some of this "shortage" will be made good. Cities are still expanding and all classes are increasing their consumption of industrial products. Assured of political stability for several years, the railroads are planning an extensive construction program. The economic revival in Europe is being reflected in an increased demand for manufactured goods as well as foods and raw materials.

How Ups and Downs Affect Demand

The ups and downs in business activity and employment undoubtedly affect the demand for such raw materials as cotton, wool and hides, and, to a less extent, the demand for foods of higher grade such as meat, dairy and poultry products, fruits and early vegetables. While changes in the income of the industrial classes are reflected primarily in the amount

(Continued on page 15)

New Jersey's Agricultural Convention

Many Organizations to Meet in Trenton during Annual Farm Products Show

WITH the New Jersey State Farm Products Show, and the Tenth Annual State Agricultural Convention as the attractions, Garden State farmers who visit Trenton from January 13 to 16 will put in some busy days.

A complete program giving full details about the many meetings of the week and the various speakers may be obtained from the Secretary of Agriculture, Trenton, New Jersey.

Following is the schedule of meetings, with the place of assembly and the time they are to begin:

TUESDAY, January 13.—Judging of exhibits, Armory, before noon. New Jersey Federation of County Boards of Agriculture, Squad Room, Armory, 1:30 P. M. County Board Federation banquet, Hildebrecht's Restaurant, 6:30 P. M.

The General Assembly

WEDNESDAY, January 14.—State Agricultural Convention, Assembly Chamber, State Capitol, 10:30 A. M. and 2:00 P. M.

New Jersey Baby Chick Association, Hildebrecht's Restaurant, 7:00 P. M.

County Board Federation, Assembly Room, State Capitol, 8:00 P. M.

THURSDAY, January 15.—New Jersey Holstein Friesian Breeders' Association, Moose Hall Auditorium, 9:30 A. M. and 1.30 P. M.

New Jersey Guernsey Breeders' Association, Moose Hall Auditorium, 9:30 A. M.; Lodge Room, 11:00 A. M. and 1:45 P. M.

Ayrshire Breeders' Association of New Jersey, Moose Hall Auditorium, 9:30 A. M.; luncheon at Stacy-Trent Hotel at noon; Supreme Court Room, Part III, State Capitol, 2:00 P. M.

New Jersey State Potato Association, Rider College Auditorium, 9:30 A. M. and 2:00 P. M.; banquet, Hildebrecht's Restaurant, 6:30 P. M.

New Jersey State Poultry Association, Y. M. H. A. Auditorium, 10:00 A. M. and 2:00 P. M.; banquet, 7:00 P. M., place to be announced.

New Jersey Alfalfa Association, Moose Hall Auditorium, 9:30 A. M.

New Jersey Beekeepers' Association, Republican Club, 9:45 A. M. and 2:00 P. M.; supper, 6:30 P. M., place to be announced.

Dairymen's Get-together Banquet, Hildebrecht's Restaurant, 6:00 P. M.

FRIDAY, January 16.—New Jersey State Horticultural Society, Y. M. H. A. Auditorium, 10:00 A. M. and 2:30 P. M.

New Jersey Beekeepers' Association, Republican Club, 9:00 A. M. and 2:00 P. M.

Swine Growers, Squad Room, Armory, 10:00 A. M.

Rural Church Conference, State Street M. E. Church, 10:00 A. M., 2:00 P. M. and 7:30 P. M.

Home Economics Program, Stacy-Trent Hotel, 10:00 A. M. and 2:00 P. M.

Embargo Established on Fowl

A FOWL PLAGUE quarantine has been established by the Pennsylvania Department of Agriculture against other states.

"This embargo is designed to protect Pennsylvania's $50,000,000 poultry industry against diseased fowl shipped from other states," says Dr. T. E. Munce, Director of the Bureau of Animal Industry, "and is not placed thru the necessity of protecting the public health; because Fowl Plague is not communicable to human beings.

"Only a few cases of Fowl Plague have been observed on Pennsylvania poultry farms, and the general health of our native fowl," says Dr. Munce, "is good.

Imported Chickens Cause Trouble

"Most of the trouble," he continued, "has been among chickens shipped from points outside of Pennsylvania to Philadelphia and Wilkes-Barre for slaughter purposes."

The Bureau of Animal Industry recommends preventive measures and sanitation to destroy and limit the infection. Sick fowl should be killed and all carcasses immediately burned or properly buried. Repeated cleaning of the infected premises, coops, crates, other containers and cars, followed by thoro disinfecting is recommended. The disease is spread by the intermingling of fowl, exposure to infected premises, coops, crates and other carriers.

Poultrymen should be careful about adding new fowl to their flocks. Where additions must be made the added fowl, regardless of their source, should be kept by themselves for at least a week. In any case the coops and crates should be carefully cleaned and disinfected or burned Should any poultry become sick the local practicing veterinarian should be consulted.

It is believed by the state officials that if the proper precautions are taken by all concerned the trouble will soon subside.

Vol. 91, No. 1. Phila., Pa., Jan. 3, 1925 Whole No. 1442

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

If a thousand plans fail, be not disheartened; as long as your purposes are right, you have not failed.
—Thomas Davidson.

"Play the Game"

AS WE write, the postman brings a beautifully engraved wall-piece on which the following New Year's thought is printed. We pass it on to you for your encouragement in the dark moments which we hope will not come during the coming year:

"For when the one great scorer comes
To write against your name,
He writes not that you won or lost,
But how you played the game."

World's Wheat Crop

THE latest world figures on the 1924 wheat crop indicate a shortage of about 440,000,000 bushels of wheat as compared with the crop of 1923. While this amount is only about three and one-half per cent of the crop of 1923, yet it is enough to make practically a fifty per cent increase in the present price of this staple product. When so small a change in amount makes so large a difference in price it is readily seen that the difficulty of adjusting production to demand is very great, since climatic conditions, a factor over which we have no control, may make a greater difference than this in any year.

Janus

JANUS was a Latin divinity, after whom the first month of the year, January, was called. He was held in great reverence by the Romans, and was represented as having two faces, one looking forward, the other backward. The principal festival held in honor of Janus was New Year's, when people gave each other presents.

The influence of this ancient reverence is still felt to some extent, altho after the advent of the Christian era the sentiments and practices attaching to Janus were coupled with those of another land and applied to the Christmas festival. However, some inward impulse in most of us tends to develop a Janus-like feeling and, as we stand on the threshold of the new year, we look both ways; Backward over the years and experience of the past, forward, trying to peer into the future to see what it has in store for us. The latter is probably a futile effort unless we are wise enough to learn lessons from our backward look and apply the knowledge thus gained into molding the future.

Lagging Behind

IT WILL be difficult, in the light of experience of most classes of farmers the past few years, to realize that the per capita production in the United States has been falling gradually. The mass production of crops in 1924 was 113 per cent of the production of the average for the five-year period of 1910-14, but the increase in population has been more than this. In other words the per capita production for 1924 was only 95 per cent of the production of that five-year period. The trend has been in this direction since 1915.

We frequently hear the gradual increase in production mentioned from year to year, but usually fail to compare the increase with that of the consuming population. This comparison is necessary if we are to fully understand the question. We have an article from a leading potato grower of the East bearing upon this subject in relation to potatoes which will be published in these columns shortly. The feature of the case which is not yet explained satisfactorily is that in spite of less food per person prices have been too low for profit for some years.

No Poultry at Products Show

SINCE page 2 was put in type the following has been received from Harrisburg: "Because of the existence of European Fowl Plague in the eastern section of the United States, and for the need of taking every possible precaution to prevent the spread of this disease, it has been decided not to hold the poultry exhibits at the Pennsylvania State Farm Products Show in Harrisburg, January 19-23, 1925. Representatives of the Pennsylvania State Poultry Association, Pennsylvania State College, Pennsylvania Bureau of Animal Industry and the Executive Committee of the state Farm Show, came to this decision after a conference in Harrisburg December 24.

"It is explained that the decision to abandon the poultry exhibition will not interfere with holding the Egg Show which promises to be a record-breaker this year."

Hog Markets Surprising

IT IS not usual to find the prices of a product rising in a period of heavy market receipts, yet that is the case in the hog market at present. There seems to be a perfectly logical reason for it, however, as there usually is for market actions when all the factors are understood. In this case the price of corn is causing growers to rush their hogs into the markets at more than normal speed. Since the farm supply of hogs is not abnormal, it is clear that heavy shipments now will cause a scarcity later on, and packers are bidding up the price in order to increase their holdings for the time of possible scarcity.

Forestry and Taxes

A LETTER from a thoughtful reader takes up one phase of the forestry program which is not often mentioned. The letter appears in The Voice of the People department, page 23. There are localities in Pennsylvania from which it is quite impossible to raise sufficient taxes to maintain the schools and roads because a large proportion of the area of those sections has been taken by the state for forestry purposes and, of course, such lands contribute no taxes. The other feature which the correspondent mentions is the unfair competition with the small woodlot owner into which the state enters in the production of trees and wood. Of course there is a law exempting from tax privately owned forest land under certain conditions, but this does not apply to the few acres of woodland or woodlot on the average farm. Is the state acting fairly towards landowners in sparsely settled districts adjacent to forest preserves, and towards the small producer of wood and trees who pays full taxes on his holdings? If not, what changes in the program are necessary to rectify the error?

Be on Your Toes

IT LOOKS as if it would be more than ordinarily necessary for farmers and farm organizations to be on the job early and efficiently if the measures in which they are interested are to be successful before the legislature now meeting in Harrisburg. The things in which most leading farmers are interested are: The appropriation of sufficient funds to successfully carry on the work of pest and disease eradication; proper relief in the cost and care of the dirt roads, and the payment by the state of the minimum teacher's salary; also, an honest effort to equalize property assessments and tax levies. Every one of these subjects is worthy of serious consideration and action on the part of the legislative body, but unless unusual pressure is brought to bear it is possible that partisan conflict will prevent action.

The Purse Strings

OUR household editor makes an interesting announcement on page 20 of this issue. We hope to receive many helpful suggestions. The reference made in Our Farm department a couple of weeks ago to the number of appeals for help in solving such questions shows the need in some homes for definite information. It is too bad that the same rules of fair business cannot be adopted and applied in this, the greatest of all partnerships, as are used between partners in other business. This is a good place to begin an honest study of the problem and we hope that both men and women will contribute to the discussion so that a simple, workable plan may be presented and the harrowing friction which exists in some homes be relieved.

The Poultry Disease

IT IS but natural that the mid-western states against which embargoes have been placed by eastern states, thus preventing the marketing of the poultry, should feel peeved over the action. They claim that the situation is exaggerated and that the disease is merely a light affection of roup, something that is always present in some place, and that because of the scare and prejudice created by publicity the damage to the poultry industry will be great and unwarranted. That it has thus affected the public is shown by the fact that the demand for all poultry has been greatly lessened, regardless of where it is produced.

Washington Letter

MUSCLE SHOALS.—The situation as regards the status of Muscle Shoals legislation may be summed up as follows: The interests that want to secure the property wholly as a power proposition, the so-called power trust, and the group who insist upon government operation are determined to defeat the Underwood bill. There is no possible chance of getting the Norris bill or any other government operation measure thru Congress, and if one were to pass President Coolidge would undoubtedly veto it. Unless the Underwood bill is passed by March 4, it is understood that Secretary of War Weeks will sell the power to the local power interests, and before another congress can come to an agreement as to its disposition it will have become so inter-connected with the power companies' properties that there will not be enough wisdom in congress to unscramble it. The government operation group will have won their point, the power companies will have the power, and the idea of a great plant to supply the farmers with nitrates will be an empty dream.

THE POULTRY DISEASE.—At the urgent request of representatives of the poultry trade, the Petaluma Poultry Association, the farm organizations and the Department of Agriculture, Congress has passed a joint resolution making available $100,000 for investigating the poultry epidemic and eradicating the disease. It is supposed to be the European fowl pest, but Dr. John Mohler, chief of the Bureau of Animal Industry, says that diseased chickens have been received for study from several points in the Central West within the past few weeks, but fowl pest was not encountered in any of these shipments.

GREAT LAKES-ST. LAWRENCE SHIP CANAL.—President Coolidge has addressed Congress urging that $275,000 be made available for completing surveys to determine the feasibility of the proposed Great Lakes-St. Lawrence ship canal. Opposition to the project in Canada, however, indicates that we are far from a complete realization of the great project.

In case the two governments concerned cannot come to an agreement friends of the all American waterway by way of Lake Ontario and the Hudson River, are in readiness to start a nationwide campaign for their project, which requires a charter but no government appropriations.

AGRICULTURAL COMMISSION TO MEET.—The President has asked for an appropriation of $50,000 to pay the expenses of his agricultural commission which will meet in Washington January 5, and continue in session until the investigations are completed and recommendations for an agricultural legislative program presented to Congress.

PURCHASE OF FOREST LANDS.—A bill authorizing an appropriation of $40,000,000 to be expended over a period of ten years in the purchase of forest lands for the protection of watersheds of navigable rivers and forest conservation has been introduced in the Senate by Senator McNary, of Oregon, and in the House by Representative Woodruff, of Michigan. It is in line with the government's policy to own vast areas of forest and cut over lands which are suitable for reforestation.

WAX FRUITS AND VEGETABLES ON EXHIBITION.—Four thousand specimens of fruits and vegetables, done in wax, have been placed on exhibition by the office of Horticultural Investigation of the Department of Agriculture. There is also being shown 1000 free-hand water color paintings from life of fruits, flowers and vegetables, as well as photographs, used in the identification classification and descriptive work of the bureau. Lantern slides are shown of the fruit and vegetable industry and home plots before and after being beautified by landscape gardening. L. C. Corbett, senior horticulturist in charge, says the wax models and drawings represent products obtained in all parts of the United States and possessions, and form the finest and largest collection of this nature in the country.—E. E. Reynolds.

Harrisburg Letter

MAY BOOST BUDGET.—Altho the budget to be laid before the legislature soon after it convenes here next week will represent an immense amount of work, and probably the best estimate of what it will cost to run the state government within the revenue in sight, there is nothing in Pennsylvania law to prevent the general assembly from raising the items or from cutting them. As a result there are increasing signs that the House Committee on Appropriations will revise the appropriations proposed for the Department of Agriculture. Within the last few days legislators from counties in the area likely to be invaded by the Japanese beetle have made it plain they will insist upon "an adequate allowance" so that there will be no repitition of the scrambling to get money and shifting of forces, such as marked the work this year. There are also indications the bureaus of the Department will get more liberal treatment in committee. The same is true, in a measure, of a number of other departments.

THREATEN TO OVERRIDE.—More talk of concerted plans to pass appropriations in the middle of the session, instead of allowing log rolling to keep them until the final fortnight, has been heard in the last week than for a long time. There are even threats to pass bills over the veto of the Governor if he attempts reductions. Such talk is not uncommon, but instances where a gubernatorial disapproval is set aside are rare and cases where a reduction of appropriation was nullified are more than rare. But the talk is indicative of the feeling with which legislators are approaching the session. Led to believe there would be more money available this year and that wiping out of liabilities would mean more cash on hand, some ambitious schemes were prepared, only to meet the Pinchot warning against embarking in increased allowances. As a result, in the midst of the controversies over speakerships, committee chairmanships and places, there is much talk of organizing to override executive action. If this is done on appropriations it will simply mean new taxes and, for this reason, the taxation problem is looming up in the background as the biggest proposition of the coming session. From all indications the State Taxation Commission is not going to recommend many acts tending to increase or consolidate the tax laws. Rather it will seek a way to get rid of annoying inheritance taxes and urge simplification and economy in collections of the ordinary imposts.

THE POULTRY QUARANTINE.—State Animal Industry people say frankly they do not know when the quarantine established against shipment of live poultry into Pennsylvania can be raised. They have some doubts whether the disease will run its course so as to relieve the situation to any marked degree before early spring. Shipments are possible only under special permit and such applications may be investigated. As a result of the quarantine the poultry exhibit at the State Farm Products Show has been abandoned, but not the egg exhibit.

FARMERS UP TO DATE.—Data furnished for the state's new farm census from Fulton and Susquehanna Counties show that 283 out of 3873 farms in Susquehanna County have electrical equipment and over 2000 automobiles. In Fulton over half the farmers have motor vehicles. In both counties there are radio receiving sets, tractors, trucks and silos in greater number than ever before.

THE 1925 PROGRAM.—According to State Highway officials bids will be asked on probably 1200 miles of new road construction during 1925, the first list containing 135 miles. It is expected to open bids the latter part of January and to award contracts if the Supreme Court upholds the bond issuing act. If not, the Legislature will be asked to remedy the situation by a new law.—Hamilton, Harrisburg.

New Jersey Letter

TON LITTER BREAKS RECORD.—Salem County boasts the state record of 2643 pounds as the weight for a litter of Poland-China pigs produced in the allotted 180-day period by one of its junior club members. Melvin Patrick, of Mannington Township, is the champion New Jersey junior pork grower. The litter averaged a trifle over 296 pounds per pig, and came within approximately seven pounds of equaling the world's record in ton litter contests made in the western states. The record is in line with the club agent work started in Salem County last spring.

JAPANESE BEETLE APPROPRIATION.—New Jersey farmers were represented recently before the House Committee in charge of federal agricultural appropriations by Dr. Thomas J. Headlee, State Entomologist, who asked Congress to appropriate more funds for fighting the Japanese beetle. To the amount approved, would be added state money amounting to $60,000 from New Jersey, $50,000 from Pennsylvania and $10,000 from Delaware. This appropriation is needed to prevent the further extension of the area now infested by the beetle. It was reported that 3976 square miles in New Jersey are now subject to the ravages of the beetle and that the pest increases annually in a spread of from eight to twelve miles, which is its natural flight range.

CAPE MAY BOARD MEETS.—At the annual meeting of the County Board of Agriculture in December, the rapid growth of poultry work in the county was pointed out. Among the other important developments in extension work reported during the year was vocational training and the attention to improvement of the seed corn and seed potatoes used by growers within the county. Howard Hancock, of Bridgeton, N. J., Vice President of the New Jersey Federation of County Boards of Agriculture, told of the work of the American Farm Bureau Federation during the last year.

SOMERSET COUNTY CORN SHOW.—Despite the poor corn crop in New Jersey this season, the corn show held at Somerville in mid-December in conjunction with the annual meeting of the Somerset County Board of Agriculture indicated an ample supply of good seed ears for next spring. Hoffman Brothers, of Somerville, took grand champion awards. Prof. H. K. Cox, of the New Jersey State College of Agriculture, described the points to be considered in selecting good seed ears, and explained the basis for judging exhibits at the corn shows.

GAIN IN ACCREDITED HERDS.—Figures made public recently by the State Bureau of Animal Industry show that 1700 dairy herds are now under inspection for bovine tuberculosis. The use of tubercular tests within the last year has resulted in the destruction of 4000 animals, for which state indemnities are being paid. In the second and third tests of herds under supervision this year, an average of only two per cent reactors has been discovered, indicating the splendid clean-up work which the accredited herd plan has been bringing to New Jersey dairymen. The state appropriated $135,000 this year, to which the federal department appropriated a like sum. Approximately 25,000 animals were tested in 1924, this being an increase of sixty-three per cent over last year.—W. H. B.

10 reasons why!
You Should Own One of the
DEPENDABLE HARDIE SPRAYERS

1. PUMP ELIMINATES 90 PER CENT WEAR. No crossheads. All wear comes on two soft packings —replaceable in two minutes.
2. CHAIN DRIVE — Flexible, positive and durable.
3. EXTRA SENSITIVE REGULATOR holds pressure to dot and takes load off engine when nozzles are closed.
4. AUTOPLEX TRUCK CARRIES LOAD LOWER than other trucks. Turns in 20 ft. circle. Eliminates pole whipping.
5. HARDIE ORCHARD GUN sprays finer, wider, evener, farther.
6. BEST MATERIALS USED — Crank shaft manganese steel, oversize. Phosphor bronze bearings. Machine cut gears.
7. HOSE STANDS ALL PRESSURE you can put into it. Couplings can't blow off.
8. THREADLESS VALVE CAGES allow lifting out valve without sticking and prevent gaskets blowing out.
9. SPEEDY SERVICE—Dealers in every fruit section, carrying full stock of parts. "Service seldom needed, but service when you do need it."
10. COMPLETE LINE OF POWER and HAND SPRAYERS. There's a size and type to fit your needs.

OUR FARM

Where an Editor Works and Thinks

A FRIEND of this column in writing us the other day asked in a "P.S." why we are still bungling along without a name for Our Farm. Well, we have no good excuse to offer. For two years now we have been getting along by referring to it as Our Farm and so well established is that term that others refer to it in the same way. However, we realize that every other farm is referred to in the same way, except by those farmers who always say "my farm" when speaking of their place. We have known men to say "my farm," "my house," "my cow,", etc. when everybody knows that other members of the family have as much or more than they to do with making it a success.

* * *

WE WERE very much surprised the other day to receive a business letter addressed in beautifully flourished hand-writing as follows: "R. P. Kester, Belleview Farm, Newtown, Pa." We have not the least idea how this stranger got that name, but it strikes us as good and appropriate. By a liberal interpretation it means beautiful view and that suits the location. We can look over some beautiful country from almost every place on it. To the east we can see the village of Newtown, the George School property and other fine farms. To the south is the valley of the beautiful Neshaminy bordered by graceful trees. Our own thirty acres are in themselves a beautiful view. We believe the name would look well on letter heads and labels. Is there objection to the name?

* * *

WE ARE not yet much in the chicken business, except in the wife's name, but we have noticed that good commercial scratch feed and mashes containing beef scrap get more eggs than is usually the case when hens receive only home grown grains. If chickens do not receive everything needed to make eggs, and in generous supply, even that which is fed is fed at a loss. In these days of high priced eggs and after one has been to the expense of raising the fowls it is poor economy to withhold the amount and kind of feed necessary to best egg production.

WE HAVE promised ourselves (and this is not the first time that we have made the promise) that we will keep accurate account of all our farming operations during the coming year. By that we mean that each crop shall be charged with the costs of producing it and credited with what it brings. That is what a good business man in any other line of work does, and why should not the farmer? Too many in our line of business just guess at the results of the year's work. If at the end of the year they are square, or come out a little ahead, they consider themselves successful. Very few farmers can tell which of their crops or productions have made and which have lost money for them. Now is a good time to start finding out. Who will join us in the effort?

* * *

IF FARMERS could handle the bull by the horns the way a certain automobile manufacturer does, their selling problems would be easy. If farmers could load up their potatoes, eggs, etc., drive to the dealers and say, "Here is your allotment of produce. Take it and pay the price or you can't have any more to handle," and if the farmers had things tied up so that the words would be final, dealers would simply swallow their wrath, take the produce and pay cash on delivery. But what a howl that would raise if conditions made such a business method possible by farmers. City newspapers look with holy horror upon any plan that looks like monopoly or price-fixing by farmers.

* * *

EXPERIENCE proves that the attitude of the public is not the only or even the chief thing that prevents farmers from forming business organizations which would give them a say in naming a fair and living price for their products. There are always enough farmers who refuse to co-operate with their fellow farmers and who will sneak out the back way and undersell the market. Here is where the real difficulty lies and until farmers can really agree to agree and work together there is plenty for them to do without wasting their energies in blaming all the trouble upon someone else. If, after thinking it over, you can honestly say that this slap is not justified we shall be glad to apologize.—R. P. K.

I have learned that happiness is not to be had for the seeking, but comes quietly to him who pauses at his difficult task and looks upward. —David Grayson.

THE CHEERFUL PLOWMAN

Advise on Leasing

McDOUGAL'S girl and Finney Bud were wed the other day, they both are young and quite unsung in worldly aims and way.

"I think I'll lease a farm from Weiss," the lad declared to me, "and settle down near Dumphreestown as snug as we can be. The buildings there are large and square, the lawn is neatly set; the pasture lot and garden plot are good as I can get. I'll get the half of every calf, of every bushel grown, each second swine will count as mine, each second hen my own. I sort of feel it is a deal where any man should thrive if he is worth his space on earth and is at all alive!"

"That may be nice, but figure twice before you jump," I pined, "and think it thru before you do the stunt you have in mind! I understand you have on hand a fair supply of pelf, so why not start a solo part at farming for yourself?

"Why don't you try at once to buy a farm to call your own? The money spent in heavy rent will lug a decent loan! I'd rather far go buy a star, if terms were made to suit, than lease the earth with all its girth and sun and moon to boot! I've never spent a dime for rent, and my best word to you is aim to plan as best you can to push your own canoe!"—J. Edw. Tufft.

Make more money from poultry

A FEW years ago Mr. Hale Thompson of Williams, Indiana, decided that he wanted to make more money from his chickens. He consulted his county agent and found out how to go about it. He secured the right equipment. This year his chickens made a profit of $3,200 for him.

This is just one case out of thousands that could be named. Mrs. Fred Gassaway of Rivervale, Indiana, cleared $1,500 from her chickens alone. Mrs. Fred Schlunz of Erwin, Missouri, made more than $1,500. Mrs. John Schwengel of Champaign, Illinois, made over $1,200. Mrs. W. C. Spurgeon of Columbia, Missouri, made over $2,500.

You Can Make Profits Like These, Too

You can make more money from poultry—perhaps more than these people are making. It isn't hard. It doesn't require a big investment, nor does it necessitate slighting any of your other work.

It merely means knowing something of modern poultry practices and using the right equipment. With these two things, anyone can succeed from the very start.

Ask Anyone About Buckeye

Ask any poultry authority about Buckeye Incubators and Brooders. Ask your state agricultural college, ask your county agent, ask any poultryman or successful farmer. Without exception, they will tell you that Buckeye equipment is safe, reliable and entirely satisfactory. That it produces results that count—every time. That it insures success.

Buckeye
incubators
coal-burning brooders
blue-flame brooders

They will tell you that Buckeye is the *right* equipment for you as it has been the right equipment for thousands of others who have succeeded.

"Bigger Poultry Profits" Will Give You All the Facts

Our new book on modern poultry methods will not only tell you why Buckeye equipment insures success, why it enables you to produce bigger, earlier hatches of stronger, sturdier chicks, why it enables you to raise every raisable chick to profit-producing age—but it will give you all the facts you need to make real money from chickens.

It tells you how to improve your present flock, how to develop a 200-egg strain, how to feed and house poultry, how to cull, how to secure winter eggs, how to quickly produce big, heavy meat birds, how to get earlier hatches of stronger chicks, how to pick the heavy layers and how to get high prices. With these facts and with unfailing Buckeye equipment, *you simply cannot fail.*

But You Can't Get Buckeye Profits Without Buckeye Equipment

Don't try to make the profits that Buckeye users are making, without genuine Buckeye Incubators and Brooders. It can't be done. Thousands have tried to do it with cheap, inferior equipment and have failed. Thousands of these cheap incubators and brooders have been actually thrown away to make room for Buckeyes. And success has followed because success and worthwhile profits are built into Buckeye Products.

Start *right* with Buckeye—that is the advice we give you from our years of experience in *making* poultry raising equipment. Start *right* with Buckeye is the advice that successful men and women everywhere will give you from their years of experience in *using* it.

Isbell's Seeds DO Yield More

For forty-six years our customers' successful money-making gardens and bumper crops have proved Isbell's Michigan Grown seeds more hardy, better yielding and more dependable. Isbell's seeds yield more for the same reason that thoroughbred stock pays better—breeding tells in anything that grows.

For 46 Years

For nearly a half century Isbell's has been improving seeds—developing better strains, increasing hardiness, and yield and improving cleaning methods. Every ounce of Isbell's seed is grown under strict supervision, sorted and cleaned in our perfectly equipped plant and then tested for germination. Every precaution is taken to make certain that all the seed we ship is **true to strain, adapted to soil and of high germination.**

Pure Bred Seed

Be sure of your seed. If you are to have big crops and make more from garden and field, seed must be pure bred. **This year there is extreme shortage in all kinds of seeds. Order early.** Beware imported seed, not adapted to your soil and climate. Do not take chances—be certain by planting only Isbell's Pure Bred Seed. Then you know you have the best seed that 46 years of selection, experimentation and development can produce.

The 1925 Seed Annual is Ready for You

This book—which has become the buying guide for more than 200,000 of America's most progressive farmers—is even more helpful this year. It tells you how to determine what crops are best for each purpose—what strains are best for your soil—how to prepare the soil—how to plant for best returns—how to care for the different varieties. It tells you how to select seed. And it **quotes you money-saving, direct-from-grower prices,** on Isbell's Pure Bred Seeds.

This Book Means More Money for You

Send for your copy today! It's Free! This book—examined at your leisure in your own home—gives you time to plan your crops and to select the right varieties. It means less money for seed and more profit from your farm and garden. It costs you nothing but may add many dollars to your income. **Send the coupon now.**

Jersey Fruit Growers Form a Marketing Exchange

GROWERS and packers of peaches and other fruits in New Jersey are finding, not a new outlet, but a new method of selling, which insures them against waste or loss, even tho the crops be large, as they were this year.

In one town in New Jersey, with approximately fifty families, buyers traveled 100 miles or more every day of the season, which this year started August 14 and lasted until after the middle of October, for peaches alone.

The small town of Oldwick, N. J., which, previous to the World War was known as New Germantown, is situated in Hunterdon County, nearly fifteen miles from Morristown and four from Somerville, about two miles off the main highway. Altho a new road is to be laid thru the town, the peach growers found that they must either truck or ship their peaches to the New York, Newark, Philadelphia and smaller markets. Because of the high cost of this method many baskets were left on the trees or in storehouses, which meant a total loss to the growers. As the orchards were enlarged and thousands of new trees set out, selling became a big problem to be met.

Selling Organization Formed

Harry Hildebrandt, owner of a small farm and an auctioneer by profession, conceived the idea of developing some sort of a co-operative selling organization, under the impression that buyers would go to the market if they could procure fruit at a price which would enable them to add cost of transportation to the original cost.

Thus was formed this year the Oldwick Peach Exchange. It was managed by Mr. Hildebrandt, and eighty farmers and fruit growers brought their product to the market. Fruit was auctioned off every day by Mr. Hildebrandt as it stood on the trucks. Commission men were the principal buyers, altho peddlers and retailers from New York, Pennsylvania and New Jersey also visited the market each day.

A Successful Enterprise

An average of 1500 baskets of peaches were sold per day at prices running from 75c to 90c, depending upon grade. In conjunction with peaches other fruits and vegetables were sold and activity was reported as late as November 1.

All fruits were packed in sixteen-quart baskets, in three grades. Usually there were lined up from fifty to sixty vehicles of various sizes and types, from the five-ton truck to a small coupe on which a dozen baskets were packed at one time. The severe storm of July 25 shortened the peach crop by several thousand baskets in the Oldwick district.

The organization received from 25c to 30c per basket for selling. This was used to maintain the headquarters, pay Mr. Hildebrandt's salary, etc. Headquarters were at the woman's club, where the women of the community gathered every day and prepared a good meal for the buyers.

Grading machines which separated the peaches into three sizes were used. Orchards were young but bore unusually good fruit, due to the care given the trees under the instruction of experienced and trained experts. Thousands of new trees were set out as the result of the success of this selling agency. Farmers declared they had never met with better success, nor received larger profits.—E. A. C.

Looking Backward and Forward

TO ANY one who sits down on the first of January to plan his crops for 1925 the news in recent crop reports makes suggestive reading. Even tho we do not all grow acres of carrots and turnips, the changes in the prices of these roots, between last year and this, emphasize a point which we all have to keep in mind when choosing for ourselves what to plant and what to leave alone.

Those of us who had no carrots to sell late last winter will remember that the prices for this vegetable were unusually high. At the same time, when we wished to sell turnips or rutabagas, we learned that the prices were not good. It looks now as if there were a good many of us studying those prices, and that we have done what we always do when prices are high on one thing and low on another because this year carrots are reported to be in very good supply, while turnips and rutabagas are in good demand, just the reverse of last year.

A Guessing Game

Each of us must decide for himself whether he can guess correctly what prices will be next year on the basis of what they have been this year. If large increases in acreage of our favorite crops are reported from other states before it is necessary to put in our own acreage, we may expect that nothing but unfavorable weather for the other fellows can prevent low prices for us. This does not always happen, of course. The sweet potato crop of the past year, and the prices brought by sweet potatoes this fall and winter, show that a big acreage does not always mean low prices. Still, this is the exception and not the rule.

If whole states or counties are rushing into the crops that I would like to plant, and I learn of it early enough, then I will think hard before I plant heavily of those crops. In short, it seems to me that prices and acreages of crops that change in price and acreage very suddenly form a poor basis for fixing our own planting. Taken with these facts must be the adaptability of our soil and our own experience with particular crops.

Changes We Plan to Make

Altho on our place we shall not make any extensive changes in plantings because of these changes in carrots and turnips, yet the past year has not been without suggestions of changes that could be made with profit. These are adapted only to our local situation, perhaps; as to that, readers may judge for themselves. Here are some of the changes we propose to make.

1. We will have more fall lettuce ready to cover with frames about November first. It should be nearly full size by that time, because it does not grow much after the nights become very cold. By careful attention to ventilation and watering we can keep this lettuce in good condition for four weeks or more, regardless of the weather, and can retail it at our leisure. New York, Imperial, and

Perfection will be the chief varieties.

2. There will be a larger planting of Golden Plume or Golden Heart celery, both for summer and fall selling. This variety is a valuable one, with new qualities that separate it from all others. Yet I do not think we will drop everything else in favor of this new celery. Altho the summer crop may be wholly of Golden Heart, the planting for fall and winter use will be made up of at least three varieties, probably Golden Heart, Easy Blanching, and a winter variety, Giant Pascal or Emperor.

Winter Varieties Will Sell

There has been such a strong movement away from the winter varieties, and the early easy blanching types are so filling the market, that the small grower has a good chance with the winter sorts of much superior quality.

3. Spinach in summer even under irrigation is a gamble, but since we have water at hand we expect to try to grow spinach in every open month of the year. As usual the largest plantings will be made in spring and fall, but we will run the risk of the crop's going to seed and of suffering badly from the leaf miner.

In summer there is not a lively demand for spinach, yet last summer I knew of growers who obtained a dollar and a half a bushel for moderate quantities of it in the hot months. Since people have thought more of the food values of particular vegetables, they have demanded a constant supply of them. Spinach has been pushed hard as a source of vitamins, and converts to this idea want their spinach in summer as well as in the cool months.

4. We shall figure more carefully to get in a crop of oats and peas for tomatoes, celery, and other late crops, as a help in saving manure. Last year the oats and peas did well, and we thought we could see a great help in the tomato crop. Last year, of course, was wet in the spring, and the water helped the oats.

Fertilizing for Better Crops

We shall put on a few hundred pounds per acre of mixed fertilizer, believing that we will more than get it back in the increased growth of the cover crop. That fertilizer is pretty sure to be available for the late crop no matter what the weather is in spring. If there is no rain, the fertilizer itself will be there in June or July. If there is plenty of rain the larger part of the fertilizer will still be there in the tops and roots of oats and peas.—W. C. Pelton.

Lebanon County Yields

THE farm Bureau of Lebanon County recently announced the result of the year's work in the various boys' and girls' potato clubs.

The yields are not large this year but taking the abnormal season into account they are fine, after all, if we forget about that California man's yield of close to 1000 bushels to the acre.

Clarence Blouch, of the Bunker Hill Club, was first with 333 bushels to the acre, and Araminta Smith, of the Iona Club, second with 314 bushels.

A summary of the ten members with highest yields shows that eight used a power sprayer, seven plowed down sod, and all planted in April or early May and averaged seven cultivations.

The Lebanon Chamber of Commerce sponsored all six clubs. The membership totaled ninety-three boys and girls. The average yield of all members was 184 bushels per acre. The lowest yield was fifty-nine bushels, and the highest 333 bushels.—R. I. W.

More Potatoes on Less Acres —and a Premium

That's What Potter County Potatoes Do Every Year

Potato Growers Say:
Potter County Certified Seed grew more than twice as much as my own seed.
Grew 60 bushels more an acre with Potter County Certified Seed.

A premium of 15c to 25c per bag on Phila. and N.Y. Markets

Potter County Certified Seed Potatoes gave a substantial increase over native stock in practically every part of Pennsylvania, New York and Ohio.

In Butler County, Pennsylvania, a carload of Potter County Certified Disease Free Seed was distributed among 200 Club boys. 177 reported an average yield of 194.2 bu. per acre, while ordinary seed in Butler County averaged only 85 bu. per acre.

Potter County Certified Seed is a Profitable Investment

You grow more bushels per acre and get a premium for betterstock.

Our 80,000 Bushel Storehouse

is the most complete seed potato storage in the country. It is frost proof and ventilated. Experts are in daily attendance. Every potato comes out in good condition.

The Erway strain of RURAL RUSSETS and Potter County WHITE RURALS are bred especially for seeding purposes—are grown in an altitude over 2000 feet, on DeKalb soil, where the crop is favored with a short cool season and abundant rainfall.

This Makes Hardy Stock

They have been systematically cultured and rogued by experts from Penna. State College.

DISEASE FREE

Every possible means known to science has been used to eliminate and control disease. They are examined and graded in the field—before going into the storehouse—and before shipment. They are disease free and of the highest grade for seeding.

INSPECTED AND CERTIFIED

Grown under the direction of the Farm Bureau and approved by the Penna. State College and Penna. Department of Agriculture.

THE POTTER CO-OPERATIVE POTATO ASSN.

Coudersport, Pennsylvania, is a corporation of more than 100 potato growers, with financial responsibility. We stand squarely back of our shipments.

SEND THE COUPON for more information and prices of Potter County Certified Potatoes.

POTTER CO-OPERATIVE POTATO ASSOCIATION,
COUDERSPORT, PENNA.

Please send me more information and prices on Potter County Certified Disease Free Seed Potatoes. I will sow——acres in 1925 and will use about—— bu. of seed potatoes. No obligation on my part.

You can make more money too, if you will feed Oberco. Order a trial bag from your dealer or write us today. All we ask is for you to try it.

Mr. Sharp made more money with OBERCO (Protein-Mineral Feed) because Oberco has in it the minerals and protein which the birds need. You birds will respond amazingly to Oberco. They will make more money for you if you feed it, because their health is better and they lay more eggs.

Gentlemen:

My flock of 250 pullets has been fed Oberco since they started to lay. The first egg was found seven weeks ago, when the birds were four months old. During the last four weeks they have been laying from 112 to 120 eggs per day, this in spite of two weeks of sudden changes in weather, which seriously hamper egg production.

These birds are alert and bright-eyed, and are the best flock I have ever had. In addition, I have not lost a single pullet with indigestion this Fall. I give Oberco the credit for the quick development and splendid condition of this flock. No lights have been used and about half of the flock is four weeks younger than the other half.

I have also made more money with my flock of 250 two to three year old hens than ever before. They molted and got back to laying again much quicker than usual.

Yours truly,
Herman W. Sharp, Milford, Del.

Mix Oberco with your farm grains or mix it with your mash and see the difference. It also makes cheaper pork when mixed with your swine ration. Order a trial bag today.

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Turkey Won't Eat

What shall I do for my turkey? I have only one and he ate nothing but bread and milk all summer. Of course he ate while out in the fields roaming around, but lately he has been picking his legs so badly that I have bandaged them. There is always a chicken mash within reach for him but now he eats all whole corn. I have tried many remedies but the results are not satisfactory.—Mrs. W. F. D., Cumberland County, Pa.

The turkey's feet may be irritated by the scaly leg mites which burrow under the scales and cause intense itching. This can be cured by washing the legs with warm soapy water and then rubbing them with kerosene oil or strong coal tar dip.

If the bird is plump and in good physical condition it would be fit for food in spite of the condition of the legs. Scaly legs only injure the appearance of the fowl on the market and dealers like to handle poultry with smooth clean legs as they are the most attractive.—R. G. Kirby.

Wire Under Roosts

POULTRYMEN often notice that a certain percentage of the eggs produced are stained with the dirt from the bird's feet. Occasionally in the morning two or three eggs will be found checked or broken on the dropping boards under the roosts.

One remedy is to nail about two-inch mesh wire under each roosting section. The holes in the wire should be large enough to permit the manure to fall thru to the boards. It should be small enough to keep any eggs which are dropped during the night from being broken.

In the morning the hens at the back of the section will hop from perch to perch before descending to the litter on the floor and they will have less chance to walk or scratch in moist dropping. Of course the wire will raise with the roosts when they are hooked to the ceiling at cleaning time and will not interfere in any way with the work of scraping the boards.

This will not save all the eggs laid at night or keep all the dirt from the hen's feet off the eggs, but it is of some help in producing clean eggs. It is better than having to wash them. This takes time and the washed egg loses some of the fresh bloom which makes new-laid eggs attractive.—R. G. Kirby.

Which Straw Is Best?

I FIND that baled straw is a handy way of replenishing poultry litter in any of the laying houses requiring more litter, but it has one disadvantage. The process of baling seems to crush the straw and break it. The baled straw seems to break up very rapidly when scattered on the poultry house floor and is not quite as useful as the loose straw fresh from the stack.

Rye straw is not generally recommended for poultry house litter because of the possible presence of ergot which is poisonous to the flock. I have found both oat straw and wheat straw more satisfactory litter than corn fodder which the hens sometimes eat, causing cases of cropbound.

When a poultry house is dry and well ventilated the litter absorbs more manure and occasional additions of clean straw as top litter avoid the necessity of cleaning the entire house very often. However, a large mass of old dry litter contains a lot of manure which has changed to dry dust. This is kicked into the air by the scratching of the birds and makes unhealthful conditions in the poultry house for the caretaker and the hens.—R. G. Kirby.

Care of Poultry in Winter

CLEANING the dropping boards should be a daily job on the poultry farm and I find this work a great help in keeping the birds healthy. When the hens are huddled together over heaps of damp manure they are breathing bad air. The prevalence of tuberculosis in some poultry flocks may be due to a lack of clean dropping boards or the fact that no boards are used and the hens are devitalized each night by the unhealthful air.

There are times when extra work may make it impossible to give the dropping boards their daily cleaning. But do not let a few days neglect become a permanent habit.

At the first thaw be sure and clean the boards and continue to keep them in that condition. During zero weather it pays to place a light sprinkling of sand or fine coal ashes on the boards. This will keep the droppings from freezing to the wood and reduce the time needed to keep the house clean. Do not use shovels full of sand and make additional heavy work. Just a bare dusting below the roosts over the spots where the droppings fall is all that is necessary.

The Range in Winter

I often think that winter is not a dead loss to the poultryman even if the range cannot be used. The freezing of the ground and the work of the sunshine must have a wonderful power to disinfect the soil around the poultry houses. For several months no droppings are added to the soil and nature has a chance to improve and cleanse the range adjacent to the houses.

Here is the poultryman's chance to help nature keep the soil around the houses free from contamination. I observe the greatest distance that the hens range from their houses then spread the manure at a greater distance so the birds will not have a chance to scratch in the soil to which it has been added. The land used by poultry will receive enough such manure without any additions from the poultry houses.

A Good Method

I think poultrymen with small farms will find it of advantage to sell the manure beyond the requirements of their garden and fruit. On a small acreage the droppings can be taken from the house on a wheelbarrow and spread over a fenced garden where the hens do not range.

Frequently it pays to keep a wagon near the door of a long laying house and dump the baskets of droppings in the wagon every day. When it is full, the manure can be hauled to distant fields where it will be valuable in producing crops. Do not use poultry manure on the free range of the young stock. Taking precautions with the manure helps to keep down disease on the poultry farm.

I have had the best luck in keeping the dropping boards clean by keeping a bushel basket hung on a nail inside the door of each large laying house. Alongside the basket in the largest house are nails on which hang a broad metal scraper, a scoop shovel and a broom. The broad scraper quickly scrapes droppings under each roosting section into a heap. The scoop shovel transfers them to the basket. The broom is handy to gather up bits of dirt and feathers which cannot be cleaned up with the shovel.

Cleaning Equipment Handy

Keeping the cleaning equipment together is a great help in doing the work regularly. If you have to hunt all over the farm for the basket, the scraper and the shovel it is easy to put the job off until tomorrow. Some poultrymen use litter carriers to save time in cleaning their large poultry houses but a bushel basket and broad metal scraper will be enough for most poultrymen.

A handy potato sprayer filled with commercial coal tar disinfectant is useful after the dropping boards are cleaned. The fine mist on the boards will seal up and kill any disease germs that may be present in dust. The spray dope on the roosts kills the red mites and also prevents the mites which cause scaly leg from spreading over the perches from one bird to another.

When the birds are in the houses I like the small sprayers better than larger ones. The mist must be confined close to the perches. I think little is gained by filling the house with the mist from the spray and irritating the eyes of the birds. Sometimes I do not use a sprayer when the boards seem quite clean but paint the roosts with strong disinfectant.

Changing the Litter

It takes time to change the poultry house litter. Sometimes I find a storm sifts a little snow thru the open front and makes the litter damp a couple feet from the windows. Around the water pails and in front of the feed hoppers the litter becomes dirty sooner than further back in the house.

Occasionally I take a tub and rake and remove a few tubfuls of such litter. Then the dry litter under the dropping boards is forked to the front. A small amount of fresh clean litter is then added to the section.

When litter becomes thoroly damp there is no economy in trying to keep it. Hens need a dry house or they are not comfortable.—R. G. Kirby.

Corn Borer Quarantine

FURTHER territory in New York, northwestern Pennsylvania, Ohio and Michigan is added to the area, including parts of New England, now under federal quarantine on account of the prevalence of the European corn borer, in an amendment of the quarantine regulations issued by the Secretary of Agriculture, effective December 15. It is noted that no spread of the pest outside of the area heretofore designated as infested in the New England States covered by this quarantine was determined. The new territory was found to be invaded during the past season.

The European corn borer has been in this country comparatively a few years. It has been found to be a dangerous crop insect pest, and a serious menace to a number of our food products, especially our corn crop. Under the guidance of the Federal Horticultural Board, both federal and state forces are trying to prevent its spread to other parts of the country. By means of quarantines they are regulating the shipment of products likely to carry the pest outside the areas already infested.

More Eggs!

You *can* get them—from *any* flock—but *not* through dopes or stimulants! Use *regulator.* Pratts poultry regulator is a *scientific* and *certain* aid to laying. It supplies rare elements that hens do *not* get in even the *best* feeds. Rare seeds, herbs, roots—foreign grown—that make yolks, whites, shells. Some report *double* the number of eggs this way; fifty per cent increase is *common!*

32 Years of Big Success

Des Moines Incubator Co., 740 Second St., Des Moines, Iowa

If they're worth *hatching* they're worth *saving*—

How many poultry raisers now save 95 out of 100 chicks

THE way you care for your baby chicks tells the story of whether or not you can make poultry raising a profitable business. The folly of going to the expense and trouble of hatching or buying chicks without making any effort to save them after they're hatched is apparent. Just remember that healthy, sturdy chicks are not hatched from eggs laid by under-nourished hens. Right feeding for quantity egg production likewise insures quality eggs that produce healthy chicks.

That's why it's so important to feed Globe Egg Mash. Globe Egg Mash not only insures more high-priced winter eggs but first quality hatching. It's a scientific balance of the most digestible animal, vegetable and cereal proteins, especially selected for their egg making qualities.

Chicks Need Care

You start making or losing money on poultry as soon as your chicks are hatched. If you have hatched your chicks from quality eggs, or if they come from strong, healthy stock, you need have no fear of excessive loss—provided you feed them properly, right from the start. Start baby chicks on a feed that is suited to their delicate systems and you'll raise a big percentage. Not only will you cut down losses but each chick will quickly develop into a strong, healthy bird.

Globe Chick Starter

We have never found anything quite so good as Globe Chick Starter to keep baby chicks in the pink of condition. Globe Chick Starter is made with just one purpose in mind—results. It is compounded of the highest quality ingredients obtainable—the best of animal, vegetable and cereal proteins, all perfectly combined with health-giving vitamines and minerals. It is a perfectly balanced ration. Chicks thrive on it. You can't get results like this with ordinary feeds.

Make a Test

Back of Globe Chick Starter are 22 years of experience in poultry feeds, and thousands of practical poultrymen's tests. Leading authorities on feeding as well as nearly half a million poultry raisers now endorse Globe Feeds. On the strength of this unusual record, we invite a test of Globe Chick Starter. Compare it with any other feed available. Then judge its merits by results alone. We will gladly abide by your decision, whatever it may be. There is a Globe Merchant near you who will gladly tell you more about Globe feeds and supply you with literature. It will pay you to talk with him at the first opportunity. He is a good man to know.

FREE *Valuable Book on Poultry Raising . . .*

Every man or woman who raises or who plans at some future date to raise poultry, should have a copy of the Dickinson book, "Poultry Profits." The purpose of this book is to help you make more money—bigger profits from your flocks. It is a *poultry* book from cover to cover, with a special chapter on chicks—color plates showing chicks' digestive system, care necessary and why right feeding for egg production means better, healthier chicks hatched. This book represents 22 years of study and research by leaders in the poultry field. We offer you a copy free while a limited edition lasts. Write today enclosing two 2c stamps to cover cost of packing and mailing.

HELP
her through *the dangerous strain* at **Calving**—

Calving—the strain of reproduction—is a severe test for the vital organs of even the most vigorous dairy cow. In the shock and stress of this critical period lurk many hazards to health and milk-giving.

The genital and digestive organs, carrying this great added burden, need help—invigorating medicinal assistance. Otherwise there is a breakdown. Diseases and disorders creep in and the productive capacity of the cow is threatened.

To carry a cow safely through calving, nothing could be more satisfying in its results than the invigorating help of *Kow-Kare*. A tablespoonful in the feed twice a day for two weeks before, and two or three weeks after, works wonders.

Kow-Kare contains the medicinal properties to build up the genital and digestive organs to top notch vigor. A slight investment to assist nature will repay you with a healthy, productive milker and a vigorous calf.

More Milk Assured

A tablespoonful of *Kow-Kare* twice a day, one week in each month will bring many added dollars in your monthly milk check. The strain of winter feeding needs this invigorating medicinal offset right now. Try this plan on all of your cows and note results.

Banish Disease

Such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc., result from run down digestive and genital organs. *Kow-Kare* successfully treats these disorders because it builds up the key organs and makes them function as nature intended. At the first sign of cow ailments, let *Kow-Kare* be your "home cow doctor."

BAG BALM
insures a healthy udder
Keep on hand a can of Bag Balm. A great healing ointment for Caked Bag, cuts, scratches, chaps and hardened tissues.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

If Butter Won't Come

My cream seems thick and not too cold but I have churned for six and eight hours at a time and sometimes I don't get a crumb of butter. My cows are all good grade Guernseys and will not freshen until April. I feed bran and a mixed feed, corn fodder and timothy hay. Any help you can give me will be very much appreciated.—Mrs. R. S. K., Perry Co., Pa.

Quite frequently at this time of year difficulty is experienced in getting the butter to come within a reasonable length of time. This may be due to several causes. First, low temperatures; second, insufficiently ripened cream; third, stripper cows; fourth, lack of green feed or succulence; fifth, cream too thin.

Some Suggestions

The things that you can do right now to help the situation may be enumerated as follows:

1. Raise the temperature of the churning somewhat. If you have been churning the cream at a temperature of 58 degrees try raising the temperature to 60 degrees; or if you have been churning the cream at 60 degrees try making the temperature 62 degrees. Under exceptional conditions it may be necessary to raise the temperature to 65 or 70 degrees Fahrenheit during the winter season. I take it for granted that you have a dairy thermometer and are getting accurate temperatures in your dairy work rather than proceeding by guess work.

2. Ripen the cream somewhat more, so that it will be moderately sour when you churn it. This can be done readily by keeping the temperature of the cream at about 70 degrees until it is well ripened, then cool it to churning temperature and hold for two hours before beginning the churning.

3. If it is feasible get a fresh cow, so that some of the cream will come from a cow that has recently freshened.

Hard Fat Makes Churning Difficult

4. Plan now to build a silo next year or else raise some succulent feeds, such as mangel wurtzels. This will not help the cause this winter but may be of assistance a year hence. Feeds that produce hard fat make for difficult churning. Timothy hay, corn stover and cottonseed meal are included in this list. Feeds such as linseed meal, gluten feed, silage and roots produce a softer fat that is more easily churned.

5. Skim a rich cream. It should contain from 30 to 35 per cent butterfat. If the cream gets cool in the churn do not add hot water to warm it up. Better throw hot water on the outside of the churn. A handful of salt thrown into the churn about the time the butter should begin to come will sometimes aid the process. Do not have the churn over one-third full.—A. A. Borland.

Where the Feed Goes

MILK production in cows takes place normally and principally from the feed, and not by the transformation of body tissues, experiments conducted by the United States Department of Agriculture in co-operation with Pennsylvania State College indicate. The results of the studies, which aimed to determine the relation between the amount of feed that goes into milk production and the amount that goes into tissue, have just been published by the department. Copies of the publication, known as Department Bulletin 1281, Relative Utilization of Energy in Milk Production and Body Increase of Dairy Cows, may be had free, as long as the supply lasts, by writing to the Department of Agriculture, Washington, D. C.

Bradford's Association

THE Canton Cow Testing Association has just been reorganized for the eleventh consecutive year, which establishes a record for this work in Pennsylvania. Bradford County boasts of the two oldest associations in the state, the Laurel Hill association and the Canton association. Altho the Laurel Hill association was organized in 1913, one year earlier than the Canton association, it was not in operation for one year during the war, thus giving to the Canton association the honor of having been in operation for the largest number of consecutive years. That this association has been a success is readily apparent by the satisfied membership and by the fact that no difficulty was experienced in securing a sufficient number of qualified dairymen for the reorganization of the association.

Fewer Cows but as Much Milk

Records of two herds are being given to show the improvement which is possible where full use is made of the information gained thru membership in a cow testing association. During 1913-14 twenty-one cows in the herd of H. C. Gates produced an average of 7467 pounds of milk and 272.2 pounds of butterfat. In the association year of 1921-22 his herd which had been reduced to eleven cows averaged 13,231 pounds of milk and 469.4 pounds of butterfat. This shows a remarkable increase of 5764 pounds of milk and 197.2 pounds of butterfat per cow within a period of eight years. In other words in 1921 Gates was getting nearly as much milk and butterfat from eleven cows as he had secured from twenty cows in 191

His Herd Average Increased 3200 lbs.

Eighteen cows in the herd of Fred Bohlayer in 1915 averaged 6557 pounds of milk and 280 pounds of butterfat, while in 1922 twelve cows produced an average of 9854 pounds of milk and 374 pounds of butterfat. This marked increase of 3284 pounds of milk and 94 pounds of butterfat per cow indicates some of the possibilities of a cow testing association. Here again, with a fewer number of cows nearly as much milk was produced at a much lower cost.

No little credit for the successful operation of the association is due to the efficient work of Bertrand Whitney who is starting on his sixth year as tester in the association. His knowledge of local conditions as well as the information he is getting about the cows in his association makes him particularly well adapted for the service he is rendering.

Much credit for the success of the Bradford County cow testing associations should be given to the county agent, D. K. Sloan, who has long been active in promoting this work.—B.

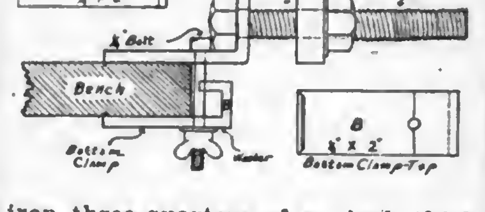
A HANDY TOOL

This Vise Is Easily Made and Costs Very Little

THE handy little device described and illustrated here will be found a very valuable and useful addition to your workbench or workshop. It can also be detached easily and quickly from any position so that you may carry it with you to use in an emergency, for example, on the running board of an automobile to help in making minor repairs.

The parts you will need to have on hand in order to construct your vise are one three-quarters-inch bolt and nut with threads cut nearly the whole length of the bolt; one quarter-inch bolt with a wing nut, two pieces of flat iron one-quarter of an inch thick and two inches wide, bent and drilled as indicated in the drawing so as to form the upper and lower clamps, one piece of flat iron three-quarters of an inch thick and two inches wide to form the heavier jaw of the vise, and a washer for each of the bolts which you use.



The jaw piece, indicated by the letter "A" in the drawing, will turn on the bolt, but as soon as it begins to bite upon the article to be held in the vise it will hold fast and firm.

The material in the vise will cost you but a few cents, and you will find that the work of making it is slight. The vise is very strong and will give better service than most of the manufactured cast-iron vises costing many times as much. The drawing shows all the details of its construction so no further directions are necessary.—Lyle W. Holden.

Pennsylvania Motorizes

WHILE Pennsylvania is not usually considered as a typical tractor or power farming state, recent figures from the State Department of Agriculture show that there is a merry race on right now between this state and several others in respect to the number of tractors owned and operated on the farms.

The figures indicate that there are now 18,467 tractors owned in Pennsylvania. This is an increase of 3040 over last year's figures, or an increase of 19.7 per cent in the number of tractors in the state in one year.

Iowa, which is considered the first state in the number of farm-owned tractors now boasts 30,556 tractors. Its tractor population increased 3678 this year, or 13.7 per cent, so in reality, the increase in Pennsylvania was proportionately much greater.

In this state, Lancaster County leads with 1240 tractors. The second county is Allegheny, with 918.

The next few years will show which state is to lead agriculturally by the general introduction of the farm tractor into its farming to cut down the overhead charges and to increase the profits. We seem to be making strides in that direction right now.—Frank A. Meckel.

"Yes, my friends," said the theological lecturer, "some admire Moses, who instituted the old law; some, Paul, who spread the new. But after all, which character in the Bible has had the largest following?"

As he paused, a voice from the back bench shouted: "Ananias!"—De Laval Monthly.

Getting a Leverage On Feeding Profits

RICH in protein, and highly beneficial to the digestive tract, it takes but comparatively little Linseed Meal to balance the ration. You may have been making money without linseed, but you will make more money with it. It pays mighty well on the investment. As an example, consider these summaries of a few experiments:

Proved worth $85 a ton when added to a corn, tankage and chopped alfalfa ration for pigs.—Wisconsin.

Showed a profit of $22.65 in one month when added to ration for 8 cows.—Iowa.

Showed a profit of $12.79 a ton when added to a ration for fattening baby beeves.—Minnesota.

Proved worth $53 a ton in fattening lambs—Nebraska.

Perhaps you have been feeding only a very small amount of Linseed Oil Meal as a conditioner. You should be feeding more for its protein value. At any rate "get straight" on Linseed Oil Meal—See just where it will fit in with the feeds you now have and make them far more profitable. Send for our new book—just off the press—

"How to make money with Linseed OIL MEAL"

By PROF. F. B. MORRISON
Asst. Director Wisconsin Agricultural Experiment Station and Prof. of Animal Husbandry, University of Wisconsin. Author, with W. A. Henry, of the Recognized American Authority on Stock Feeding—"Feeds and Feeding."

Your copy is ready for you and it will cost you nothing. By all means send for it, for it may add scores or hundreds of dollars to the season's feeding profits. Ask for booklet No. E-1

His Calf Took Him to the International This Year

FOR being the best agricultural club worker in the sixteen Keystone counties traversed by the Baltimore and Ohio Railroad, Carl Kline, of Spangler, Cambria County, Pa., received the $100 award annualy given by that railroad.

Carl began work in the Cambria County Baby Beef Club on May 9 and fed a Hereford steer until September 26. His calf weighed about 530 pounds at the beginning of the feeding period and he tipped the beam at 900 pounds on the day of the round-up. He sold for thirteen cents per pound.

Calf Was Stall Fed

Carl's feeding record shows that he started his calf on a grain ration of two pounds of corn and oats chop per day, increasing at the rate of one pound each week. His calf was stall fed, being given cut green corn and all the hay he would clean up.

Under the provisions of the Baltimore & Ohio Railroad award, Carl could use the money to defray his expenses to attend the International Livestock Exposition at Chicago or as a scholarship fund for future college work that he might understake. He chose the Chicago trip and accompanied the Adams County club judging team to the International Livestock Exposition.—A. L. Baker.

Pennsylvania's Champion Berkshire Carload

These Keystone State Berkshires won first place in the 200 to 250 pound class, one of the keenest carlot contests ever staged at the International Livestock Exposition. The barrows were fitted by State College.

Shipping Livestock

THE cost of shipping livestock in less than carloads by freight has been a serious drawback to the distribution and sale of purebred animals in recent years. When only a few animals are purchased at a sale or private treaty the added cost of transportation of such livestock frequently increases the net cost to the purchaser from ten to thirty per cent. In many cases, sales of livestock have not been made because of this additional cost in shipping the animals.

Half Rate on Purebreds in Canada

During the past few years an effort has been made by breeders' associations and other organizations interested in the distribution of purebred livestock to bring about the same regulations which are followed in the shipping of purebred livestock for breeding purposes in Canada. In Canada it has been customary to allow a half-rate on all stock that is shipped from one point to another for breeding purposes. This practice has been a great stimulus in placing purebred animals on farms. In Canada all certificates of registry have attached three coupons or shipping vouchers one of which must be attached to the bill of lading in making the shipment at the reduced rate.

During the past months four of the leading railroads in the Middle West have announced a half rate on purebred stock shipped in less than carloads and it is expected that other railroads in that territory will announce the same rate schedule at an early date. It is hoped that the same reduction will be made by the railroads in the East and thus aid in the distribution of good stock.

Registry Papers Go with Animal

In the territory where this rate is granted the minimum charge on a single shipment will be $7.00. One of the conditions necessary to secure the reduced freight rate is the filing with the forwarding agent of a certificate of registry for each animal in the shipment. The certificate will be attached to the bill of lading and released to the consignee when the freight is paid.

This method of handling the shipments will not only have a tendency to stimulate the sale of purebreds but will also result in the prompt transfer of the certificate of registry of the animals sold. — W. H. Tomhave.

Disease-Free Seed Paid

THERE were 396 members in potato clubs in Jefferson County, Pennsylvania this year, according to County Agent J. P. Winslow. The results obtained by the club members for the current season may be summarized briefly as follows:

Average yield per acre, disease-free seed	231.8 bu.
Average yield per acre, home grown seed	170.8 bu.
Average increase, disease-free over home seed	61.5 bu.
No. yields over 400 bu. per acre	10
No. yields over 350 bu. per acre	27
No. yields over 300 bu. per acre	52
No. yields over 250 bu. per acre	107

Al—There are an awful lot of girls that prefer not to marry.

Sal—How do you know?

Al—I've asked them. — Chicago Phoenix.

Outlook for 1925

(Continued from page 3)

of savings, yet standards of living are modified to some extent. There is the increasing growth of population, amounting to nearly one and one-half million people a year, calling for a corresponding increase in the number of loaves of bread, pounds of meat, butter, and cheese, yards of cloth and the like.

Two years ago, the possibility of a general European collapse figured in all discussions of the American business and agricultural outlook. That danger is passed. While Europe is still in bad shape, conditions are the best since the war and they are gradually improving. The coming year is even more certain to bring a foreign industrial revival than to produce business expansion at home.

Demand for wheat, rye, hog products and tobacco will be stronger, as one of the first effects of reviving industrial activity abroad will be to raise the standards of living from the level of post-war impoverishment.

Labor and Supplies May Cost More

An era of business expansion usually is a period of rising prices. Quotations on farm products are likely to be higher than in 1924, on the average, but prices of other commodities may gain even more rapidly. The probable long time tendency of farm prices to gain on prices of industrial products may be interrupted temporarily. With a broad demand for labor in factories and on construction gangs, wages of farm labor are likely to be a trifle higher.

The probable physical volume of agricultural output in 1925 varies greatly with the particular product. In the sphere of grains and other crops, the supply situation in the first part of the year will be dominated by the amount left from the harvest of 1924. In general, these crops have been disappearing rapidly. The main exceptions are potatoes and hay.

In making a guess as to the way 1925 crop output will compare with 1924, it is notable that, in spite of the bad growing season in 1924, corn, apples, and tobacco were the only major crops whose yields per acre were materially reduced. Crops that thrive in a rather cool season with ample moisture, such as wheat, oats, barley, potatoes and hay yielded better than in 1923.

As between the different crops, there will be a tendency to plunge on corn in the Middle West, on wheat in the Northwest and on cotton in the South. The latter half of the year may see a downward trend on these products.

Less Emphasis on Livestock

The balance between livestock and grain, which always is in the process of shifting, is changing to a stronger emphasis on grain production at present. The livestock situation will be dominated in the early part of 1925 by higher feed costs. Later on, prospects for the new crops of feed grains and hay will count.

Thruout the year, receipts of hogs will be lighter than in 1924, and, in the later months, shortage is likely to become a reality, because of the curtailment of production of which there is positive evidence. Receipts of cattle also are likely to show some falling off, because of fewer fed cattle early in the year and smaller shipments from the range in the latter half. The momentum of the trend toward dairying will be checked, in a measure, by the feed situation.

With the promise of larger domestic consumption and improved foreign buying power, prices should be enough better than in 1924 to more than offset any rise in production costs, giving the average farmer in 1925 the largest income he has had since 1920.

For Better Results on Your Farm

FAIRBANKS, MORSE & CO. has been specializing for more than 60 years in the production of better farm power equipment. "Bigger value for the money" has been the Fairbanks-Morse idea for more than half a century.

As a result, Fairbanks-Morse Products are being used today on more than a million farms. Farmers have learned by actual experience that any product bearing the Fairbanks-Morse name has been designed and built to do its work at the lowest possible cost and to do it *right.*

Look over the products on this page. Note the low prices. Compare the quality. Why take chances when it costs no more—even less—to get the best?

The local Fairbanks-Morse *authorized* dealer will be glad to give you complete information. Send the coupon for latest descriptive literature.

"Z" Engines

Over 400,000 farmers use this engine because it is low in first cost, low in operating cost, and is absolutely dependable. It is simple, sturdy and powerful. Has high tension battery or magneto ignition; suction fuel feed; positive lubrication; renewable die-cast bearings; parts subject to wear are hardened and ground; crankshaft, connecting rod and camshaft are drop forgings. More drop forgings and specially heat treated parts are used than in any other engine of this type. Highest quality obtainable—at the lowest price possible!

Steel Eclipse Windmills

All parts are completely enclosed and run in oil. Cut pinion and worm gear eliminate many parts. Crankshaft is drop forged. All working parts machined to close limits. Simple, all-metal construction—built for a lifetime of service. Self-regulating. Quick down stroke, slow lift—actual pumping two-thirds of the time. Wheel is tilted to take advantage of slightest wind. Sizes: 8 ft. and larger.

Other Fairbanks-Morse Products are washing machines, electric motors, a complete line of general service pumping equipment, pump jacks, power heads, etc.

Home Water Plants

At an extremely low cost you can have water under pressure —hot or cold—in bathroom, kitchen, laundry, barn, watering trough—wherever you want it. The Fairbanks-Morse Home Water Plant operates automatically. There is an outfit to draw water from cistern, spring, shallow well or deep well.

120 gallons per hour capacity pump, 60-cycle motor, 8-gal. galv'd tank, complete. $84.75

200 gallons per hour capacity pump, 60-cycle motor, 35-gal. galv'd tank, complete $115.00

Also larger sizes, for engine or electric drive, correspondingly low priced.

Prices quoted are cash f. o. b. factory

The Story Thus Far

BART BAYNES was an orphan who lived on a farm in Lickityaplit with his Aunt Deel and Uncle Peabody Baynes. Aunt Deel was a maiden lady of a little beyond forty. She was jealously devoted to her brother, Uncle Peabody, and Bart thought him a man of a thousand.

In 1831, when the story opens, Bart was a small lad of seven who was always getting into trouble, worrying his aunt and uncle. But it was the last straw for Aunt Deel when he upset the honey all over himself. "I can't stan' it an' I won't," she declared emphatically, and so Bart determined to go and live with the rich "Mr. and Mrs. Horace Dunkelberg," of Canton Village, and play with Sally their little daughter of about his age.

He started out on foot but was soon picked up by Dug Draper, who carried him off to Canton, and during the night left him at the water trough where he was found by the Comptroller, Silas Wright. Sile Wright took the little runaway back to Lickitysplit and from the reception accorded the Comptroller by Uncle Peabody and Aunt Deel, Bart knew that his new friend was even greater than the Dunkelbergs! One evening in early summer after this adventure of Bart's, Silas Wright suggested to Uncle Peabody that they all go fishing. And so next morning the three, Silas Wright, Uncle Peabody and Bart, set out for Bill Seaver's camp—accompanied by Bill—for a fishing trip.

Continued from last week

NOW and then we came to noisy water hills slanting far back thru rocky timbered gorges, or little foamy stairways in the river leading up to higher levels. The men carried the canoes around these places while I followed gathering wild flowers and watching the red-winged black birds that flew above us calling hoarsely across the open spaces. Now and then, a roaring veering cloud of pigeons passed in the upper air. The breath of the river was sweet with the fragrance of pine and balsam.

We were going around a bend when we heard the voice of Bill shouting just above us. He had run the bow of his canoe on a gravel beach just below a little waterfall and a great trout was flopping and tumbling about in the grass beside him.

"Yip!" he shouted as he held up the radiant, struggling fish that reached from his chin to his belt. "I tell ye boys they're goin' to be sassy as the devil. Jump out an' go to work here."

With what emotions I leaped out upon the gravel and watched the fishing! A new expression came into the faces of the men. Their mouths opened. There was a curious squint in their eyes. Their hands trembled as they baited their hooks. The song of the river, tumbling down a rocky slant, filled the air. I saw the first bite. How the pole bent! How the line hissed as it went rushing thru the water out among the spinning bubbles! What a splash as the big fish in his coat of many colors broke thru the ripples and rose aloft and fell at my feet throwing a spray all over me as he came down! That was the way they fished in those days. They angled with a stout pole of seasoned tamarack and no reel, and catching a fish was like breaking a colt to halter.

While he was fishing Mr. Wright slipped off the rock he stood on and sank shoulder deep in the water. I ran and held out my hand crying loudly. Uncle Peabody helped him ashore with his pole. Tears were flowing down my cheeks while I stood sobbing in a kind of juvenile hysterics.

"What's the matter?" Uncle Peabody demanded.

"I was 'fraid—Mr. Wright—was 'goin' to be drownded." I managed to say.

The Comptroller shook his arms and came and knelt by my side and kissed me.

"God bless the dear boy!" he exclaimed. "It's a long time since any one cried for me. I love you, Bart."

When Bill swore after that the Comptroller raised his hand and shook his head and uttered a protesting hiss.

We got a dozen trout before we resumed our journey and reached camp soon after one o'clock very hungry. It was a rude bark lean-to, and we soon made a roaring fire in front of it. What a dinner we had! the bacon and the fish fried in its fat and the boiled potatoes and the flapjacks and maple sugar! All thru my long life I have sought in vain for a dinner like it. I helped with the washing of the dishes and, that done, Bill made a back for his fire of green beech logs, placed one upon the other and held in place by stakes driven in the ground. By and by Mr. Wright asked me if I would like to walk over to Alder Brook with him.

"The fish are smaller there and I guess you could catch 'em," said he.

THE invitation filled me with joy and we set out together thru the thick woods. The leaves were just come and their vivid, glossy green sprinkled out in the foliage of the little beeches and the woods smelt of new things. The trail was overgrown and great trees had fallen into it and we had to pick our way around them. The Comptroller carried me on his back over the wet places and we found the brook at last and he baited my hook while I caught our basket nearly full of little trout. Coming back we lost the trail and presently the Comptroller stopped and said:

"Bart. I'm afraid we're going wrong. Let's sit down here and take a look at the compass."

He took out his compass and I stood by his knee and watched the quivering needle.

"Yes, sir," he went on. "We just turned around up there on the hill and started for Alder Brook again."

As we went on he added: "When you're in doubt look at the compass. It always knows its way."

"How does it know?" I asked.

"It couldn't tell ye how and I couldn't. There are lots o' things in the world that nobody can understand."

The needle now pointed toward its favorite star.

"My uncle says that everything and everybody has compasses in 'em to show 'em the way to go," I remarked thoughtfully.

"He's right," said the Comptroller. "Im glad you told me for I'd never thought of it. Every man has a compass in his heart to tell which way is right. I shall always remember that, partner."

He gave me a little hug as we sat together and I wondered what a partner might be, for the word was new to me.

"What's partner?" I asked.

"Somebody you like to have with you."

Always when we were together after that hour the great man called me "partner."

WE NEARED camp in the last light of day. Mr. Wright stopped to clean our fish at a little brook and I ran on ahead for I could hear the crackling of the camp-fire and the voice of Bill Seaver. I thought in whispers what I should say to my Uncle Peabody and they were brave words. I was close upon the rear of the camp when I checked my eager pace and approached on tiptoe. I was going to surprise and frighten my uncle and then embrace him. Suddenly my heart stood still, for I heard him saying words fit only for the tongue of a Dug Draper—our old hired man—or a Charley Boyce—the meanest boy in school—low, wicked words which Uncle Peabody himself had taught me to fear and despise. My Uncle Peabody! Once I heard a man telling of a doomful hour in which his fortune won by years of hard work, broke and vanished like a bubble. The dismay he spoke of reminded me of my own that day. My Aunt Deel had told me that the devil used bad words to tempt his victims into a lake of fire where they sizzled and smoked and yelled forever and felt worse, every minute, than one sitting on a hot griddle. To save me from such a fate my uncle had nearly blistered me with his slipper. How was I to save him? I stood still for a moment of confusion and anxiety, with my hand over my mouth, while a strange sickness came upon me. A great cold wave had swept in off the uncharted seas and flooded my little beach and covered it with wreckage. What was I to do? I knew that I couldn't punish him. I couldn't bear to speak to him even, so I turned and walked slowly away.

My dear, careless old uncle was in great danger. Had I better consult Mr. Wright? No. My pride in my uncle and my love for him would not permit it. I must bear my burden alone until I could tell Aunt Deel. She would know what to do. Mr. Wright came along and found me sitting in deep dejection on a bed of vivid, green moss by an old stump at the trail-side.

"WHAT ye doing here?" he asked in surprise.

"Nothing," I answered gravely.

The Comptroller must have observed the sorrow in my face, for he asked:

"What's the matter?"

"Nothing," I lied, and then my conscience caught up with my tongue and I added: "It's a secret."

Fearing that my uncle would disgrace himself in the hearing of Mr. Wright, I said something—I do not remember what, save that it related to the weather—in a loud voice by way of warning.

They noticed the downcast look of me when we entered camp.

"Why, Bub, you look tired," said Uncle Peabody as he gave me that familiar hug of his.

I did not greet him with the cheerful warmth which had characterized our meetings, and seeing the disappointment in his look I kissed him rather flippantly.

"Lay down on this old sheep skin and take a nap," said he. "It's warm in here."

He spread the sheep skin on the balsam boughs back under the lean-to and I lay down upon it and felt the glow of the fire and heard the talk of the men but gave no heed to it. I turned my face away from them and lay as if asleep, but with a mind suddenly estranged and very busy.

Now I know what I knew not then, that my soul was breaking camp on the edge of the world and getting ready to move over the line. Still no suspicion of the truth reached me that since I came to live with him my uncle had been bitting and breaking his tongue. It occurred to me that Bill Seaver, whom I secretly despised, had spoilt him and that I had done wrong in leaving him all the afternoon defenseless in bad company.

I WONDERED if he were beyond hope or if he would have to fry and smoke forever. But I had hope. My faith in Aunt Deel as a corrector and punisher was great. She would know what to do. I heard the men talking in low voices as they cooked the supper and the frying of the fish and bacon. It had grown dark. Uncle Peabody came and leaned over me with a lighted candle and touched my face with his hand. I lay still with closed eyes. He left me and I heard him say to the others:

"He's asleep and his cheeks are wet. Looks as if he'd been cryin' all to himself there. I guess he got too tired."

Then Mr. Wright said: "Something happened to the boy this afternoon. I don't know what. I stopped at the brook to clean the fish and he ran on toward the camp to surprise you. I came along soon and found him sitting alone by the trail out there. He looked as if he hadn't a friend in the world. I asked him what was the matter and he said it was a secret."

"Say, by—" Uncle Peabody paused. "He must a stole up here and heard me tellin' that—" he paused again and went on: "Say, I wouldn't 'a' had him hear that for a thousan' dollars. I don't know how to behave myself when I get in the woods. If you're goin' to travel with a boy like that you've got to be good all the time—ye can't take no rest or vacation at all whatever."

"You've got to be sound thru and thru or they'll find it out," said the Comptroller. "You can't fool 'em long."

"He's got a purty keen edge on him," said Bill Seaver.

"On the whole I think he's the most interesting child I ever saw," said Mr. Wright.

I knew that these words were compliments but their meaning was not quite clear to me. The words, however, impressed and pleased me deeply and I recalled them often after that night. I immediately regretted them, for I was hungry and wanted to get up and eat some supper but had to lie a while longer now so they would not know that my ears had been open. Nothing more was said and I lay and listened to the wind in the tree-tops and the crackling of the fire, and suddenly the day ended.

I felt the gentle hand of Uncle Peabody on my face and I heard him speak my name very tenderly. I opened my eyes. The sun was shining. It was a new day. Bill Seaver had begun to cook the breakfast. I felt better and ran down to the landing and washed. My uncle's face had a serious look in it. So had Mr. Wright's. I was happy but dimly conscious of a change.

I remember how Bill beat the venison steak, which he had brought in his pack basket, with the head of his ax, adding a strip of bacon and a pinch of salt, now and then, until the whole was a thick mass of pulp which he broiled over the hot coals. I remember, too, how delicious it was.

We ate and packed and got into the boats and fished along down the river. At Seaver's we hitched up our team and headed homeward. When we drove into the dooryard Aunt Deel came and helped me out of the buggy and kissed my cheek and said she had been "terrible lonesome." Mr. Wright changed his clothes and hurried away across country with his share of the fish on his way to Canton.

"Well, I want to know!—ayes! Aren't they beautiful! ayes!" Aunt Deel exclaimed as Uncle Peabody spread the trout in rows on the wash-stand by the back door.

"I've got to tell you something," I said.

"What is it?" she asked.

"I heard him say naughty words."

"What words?"

"I—I can't say 'em. They're wicked. I'm—I'm 'fraid he's goin' to be burnt up," I stammered.

"It's so. I said 'em," my uncle confessed.

Aunt Deel turned to me and said: "Bart, you go right down to the barn and bring me a strap—ayes!—you bring me a strap—right away."

I walked slowly toward the barn. For the moment, I was sorry that I had told on my uncle. Scalding tears began to flow down my cheeks. I sat on the steps to the hay loft for a moment to collect my thoughts.

Then I heard Aunt Deel call to me "Hurry up, Bart."

I rose and picked out the smallest strap I could find and walked slowly back to the house. I said, in a trembling voice, as I approached them, "I—I don't think he meant it."

"He'll have to be punished — just the same—ayes—he will."

We went into the house together, I sniffling, but curious to see what was going to happen. Uncle Peabody, by prearrangement, as I know now, lay face downward on the sofa, and Aunt Deel began to apply the strap. It was more than I could bear, and I threw myself between my beloved friend and the strap and pleaded with loud cries for his forgiveness.

Uncle Peabody rose and walked out of the house without a word and with a sterner look in his face than I had ever seen there. I searched for him as soon as my excitement had passed, but in vain. I went out back of the cow barn and looked away down across the stumpy flats. Neither he nor Shep were in sight. All that lonely afternoon I watched for him. The sun fell warm but my day was dark. Aunt Deel found me in tears sitting on the steps of the cheese house and got her Indian book out of her trunk and, after she had cautioned me to be very careful of it, let me sit down by myself alone, and look at the pictures.

I had looked forward to the time when I could be trusted to sit alone with the Indian book. In my excitement over the picture of a red man tomahawking a child I turned a page so swiftly that I put a long tear in it. My pleasure was gone. I carefully joined the torn edges and closed

Did you ever hear this one?—

Employer (to applicant for a position who has handed in testimonials from two ministers)—We don't work on Sundays. Haven't you a reference from some one who sees you on week days?

A man who believed he knew all about parrots undertook to teach what he thought to be a young, mute bird to say "Hello!" in one lesson. Going up to the cage, he repeated that word in a clear voice for several minutes, the parrot paying not the slightest attention. At the final "Hello!" the bird opened one eye, gazed at the man, and snapped out, "Line's busy."

A dentist is the only man who can tell a woman when to open and shut her mouth and get away with it.—New York Post.

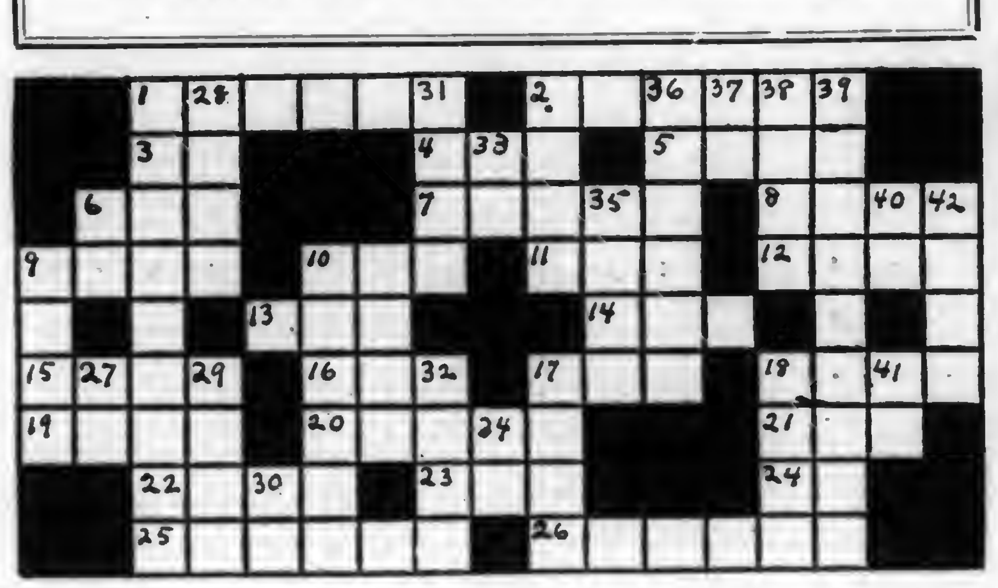
"I have been on this train seven years," said the conductor of a slowly moving southern train proudly.

"Is that so?" said a passenger. "Where did you get on?"

"What became of the girl you were making love to in the hammock last summer?"

"Oh, we fell out."

A Cross Word Puzzle for Grown-ups



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the lists given below. For example: 2 (reading across) is PLEASE, and 2 (reading down) is PEAR. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clue to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. Having a sharp or harsh taste
2. To gratify
3. Abbreviation of editor
4. The organ of sight
5. Small venonmous snakes
6. What the President's old friends call him.
7. Guides—heads the list
8. Contraction of "is not"
9. A color
10. To cook in lard
11. A rodent
12. Close by
13. Abbreviation of brother
14. Guided
15. Slender
16. Sick
17. Possessive pronoun
18. To remain
19. A seat with room enough for two—or more
20. An open space in a wood or forest
21. Help
22. A western state
23. A woman's name—and it always appears on Our Home Page
24. Abbreviation of a southern state
25. A written message
26. An underground passage

READING DOWN

1. What a work of art must be
2. A fruit
6. Roman numeral meaning 150
9. A fish
10. Sudden fear
17. Warmth
18. Herb used in seasoning
27. Behold
28. Inactive
29. A companion
30. A preposition
31. To have confidence in
32. Den of a wild beast
33. You (old form)
34. Doctor of Divinity, abbreviation
35. A vale or glen
36. A religious festival of the resurrection
37. Conjunctive adverb often used with "like"
38. To draw out and twist into threads
39. Necessary
40. Abbreviation of the continent on which we live
41. Abbreviation of words meaning "the year of Our Lord"
42. A broad flat vessel for carrying dishes, etc.

FREE This Valuable Farm Account Book and Catalog of
SuperZinc-ed
WIRE FENCES
Learn about our Super-Zinced Fences which are protected against rust by the heaviest coating of zinc which can be successfully bonded to wire. Our special formula steel and improved zincing process give a rust resisting armor that will not crack or peel, thus adding many years to the life of the fence.
Columbia Fence
is a superior hinge-joint fence, made in the standard styles for farm, poultry and garden. Both our hinge-joint and stiff-stay fences are Super-Zinced and include attractive Lawn and Flower Fences. We guarantee them to be unexcelled in quality and durability, yet they cost no more than ordinary galvanized fences.
Send a postal card for Super-Zinced Fence Catalog, also the 72-page farm account book, both FREE.

Our Young People's Forum

Cousin Ruth's Letter

Dear Forum Friends:—Well, three guesses now that you've seen my picture, what do I look like? When I turned to our page yesterday I couldn't quite decide whether I was there or not! Of course my face does get awfully dirty—printing offices aren't white and clean and shiny—but I never did catch a glimpse of myself when I looked quite like that picture! We'll have to blame the paper on which the picture was printed for my sad appearance this time. If you'll give me another chance I'll see what we can do some other week.

I'm sorry more of you didn't remember to send stamps for the city cousins, but those who did remember I want to thank a lot, and I'm sure that when some little city cousin is sucking a yellow candy elephant he'll thank you too. I took the money and bought toy candy that is going to make faces of the city cousins wreathe with smiles Christmas morning. And what do you think, some grown-up friends of the Forum gave me some nice crisp dollar bills which I'm going to give the woman who mothers the children. Perhaps with that she'll get some picture books that every one of them can enjoy all the year.

Here are the Forum friends who sent in stamps to help swell the Christmas gift fund:

PENNSYLVANIA

BEDFORD COUNTY.—Donald Lee.

BUCKS COUNTY.—Anna and Horace Smith, "Another Ruth."

DELAWARE COUNTY. — Mary, Ellen, Fae and William Andre.

ERIE COUNTY—Florence Ingram.

INDIANA COUNTY. — Irene B. Toth.

MONTGOMERY COUNTY.—Ruth Shrawder.

SUSQUEHANNA COUNTY—Grace A. Griswold.

NEW JERSEY

CAPE MAY COUNTY. — Irma Hamel.

DELAWARE

NEW CASTLE COUNTY.—Thomas Fisher, Jr.

With the season's greetings to one and all,

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—We have some cats and a dog. We call the dog Chub. I have a doll that walks, talks and goes to sleep. She is twenty-one inches tall. I call her Rosalie. I have one brother and two sisters.

I only have a little ways to walk to school. I come home for my dinner at noon. There are only seven pupils in our school. I have one little nephew three years old..—Thelma Allbeck, Montour County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a dairy farm and its name is Fruit Hill Farm. We have fourteen milk cows and fifteen young cattle. We have four horses and we like to ride them all.

I am nine years old and will be ten on Christmas. I have one brother who is sixteen and his name is David. A cousin lives with us and we have good times with our Airedale puppy whose name is Rex. He is learning to hunt and can get the rabbits.

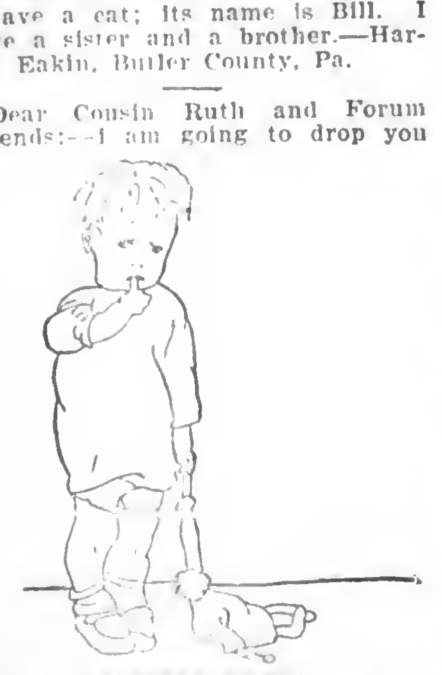
I am in the fifth grade and take music lessons on the piano. One of our horses is real old and he is still a noble animal. He is the one we all like most. We call him Prince.—Donald Lee, Bedford County, Pa.

Dear Cousin Ruth:—I was eleven years old November 15 and I had a surprise party. I had eleven of my schoolmates here and had a cake with my name on it. I had a very jolly time and got many presents.

I am in the fifth grade at school. I have a cat; its name is Bill. I have a sister and a brother.—Harriet Eakin, Butler County, Pa.

Dear Cousin Ruth and Forum Friends:—I am going to drop you friends a few lines. I was glad to see my letter on the Forum page but I am not going to tell Grandma's stories. I am going to talk about Christmas. We are going to have a Christmas entertainment at our school and one at our church. They are both on the same day. I have five speeches. They are pretty large ones. How many of you are going to take part in an entertainment? I have taken part in everything for five years back.

I am going to tell you what happened to one of our hunters. He was out in the woods and he was in a lot of brush. He heard a deer coming. The deer came into the bushes and the man got behind a little sapling. The deer jumped against the little tree and knocked it over on him. It was a doe. He called out, "If you are going to kill me I will kill you." This is a true story for my father was along.—Viola Blanche Smith, Huntingdon County, Pa.



A SORRY SIGHT!
E. V. Ulrich, Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading the Young People's Forum for about two years and everytime I read it I get more interested. I hope I may be a member of this club. Dear Cousin Ruth, write letters to us. I like your vacation trips.

I can't make as much money as Evelyn Krumenacker from Cambria County, Pa., can. She must make lots of money. I did not make half what she did. I earn my money by picking potato bugs. I like to pick them. I had to pick a hundred and then I got five cents. I got $3.50 for picking potato bugs.

I have six sisters and no brothers. I am eleven. We ship milk and I haul the milk most of the time in summer. I like to do it. Our horse, named Dick, is not afraid of trains. We have two horses and mules.

I go to school and have nine books. I like them all. I go to Shaffer's School and have a mile to go. We raised a flag at our schoolhouse. I had a part. We had a kind of entertainment. We enjoyed ourselves very much.

I would like to have two pages of Young People's Forum. Let's all get at it and write letters.—Gertie Stengle, York County, Pa.

Dear Cousin Ruth—Cousin Ruth, can my girl friend write a letter to the Forum? Her name is Roberta Koch. I showed her my letter I wrote the other time.

I had a piece to say over at Mechanicsburg at the Young People's Society on the twenty-third of November. It was a diologue for three. The rest of the girls were Mabel Nester and Roberta Koch. This is my part:

I love the day; it's a happy time;
  But there's something more I think;
It means a glad and joyful feast,
  With plenty to eat and drink.

But it also means do not forget
  To thank the Father above,
For the golden blessing of the year,
  A token of His great love.

A plentiful harvest is gathered in,
  Which the trees and gardens bore
While the rain and the sunshine did their part,
  Thank God for it all once more.
—Minerva Rarick, Schuylkill Co.,Pa.

Tell Roberta to write to us. We'd be glad to have her join the crowd.

Dear Cousin Ruth and Forum Friends:—I am thirteen years old and live in a small village called Maple Grove. I go to school every day and am in the eighth grade. I live on a small place of about thirteen acres, part of which is in timber where we go to cut our fuel for winter.

MAKE HASTE! MAKE HASTE!
Inez Van Derpool, Bradford County, Pa.

I have a tiger cat which I love very much, one horse we call Nell, also a pet guinea and about seventy-five chickens. We will butcher our three hogs soon.

I have two sisters which are married. Their names are Rachel and Charlotte. Rachel lives on a large farm, and when school is over I work on the farm. We have a typewriter which I practice on when I am thru my school books. With best wishes to all.—Jeremiah G. Holden, Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—I am nine years old and am in the fourth grade. We have a farm of about fifty acres. We have a large barn, two horses, Kaiser and Dick, three cows, four cats and about 250 chickens. We have twenty-eight ducks and one goose.

I like to work but I like to go to other places, too, sometimes. I like to visit my grandmother. My father takes me along when he goes to market and lets me stay with her till he returns. Good-bye to Cousin Ruth and Forum friends.—Aldona Bulota, Schuylkill County, Pa.

Dear Cousin Ruth and Y. P. F.:—Is there any room in your circle for a boy eight years old? I am in the second grade at school. The name of our school is Fairview and it is located on what is known as the Maytown and Elizabethtown Turnpike.

May I send a few riddles, Cousin Ruth? Here are a few:

1. If a colored waiter carrying a platter with a turkey on it should fall what would be the effect on the world?
2. What is full of holes and yet holds water?
3. What goes up over a hill without walking?—James O. Seitz, Lancaster County, Pa.

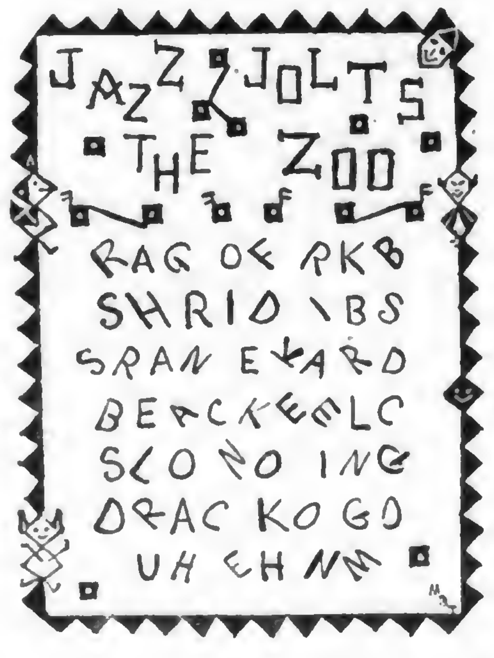
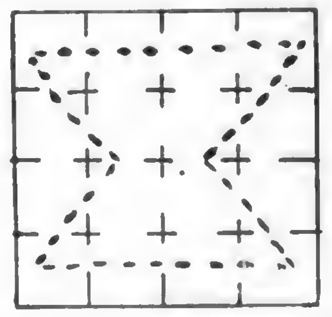
OUR LITTLE FOLKS' PUZZLE CORNER



Dear Little Folks:—Each line of the crooked looking letters contains two words, one the name of an animal, the other the sound some other animal makes. For instance, on the first line you will find letters forming the words FROG and BARK. Look carefully thru the other lines and you will find the sound the frog makes and the name of the animal which barks. When you have found the seven animals and the seven sounds they make, send me them on a POSTAL CARD, writing beside each animal's name the correct sound. Let me have the answers before January 10. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 259-263 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

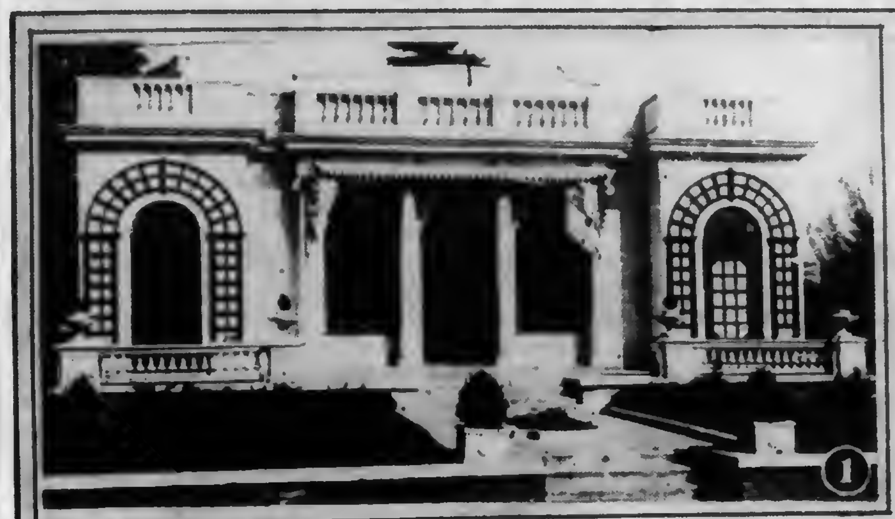
The solution to the puzzle published in the December 13 issue of Pennsylvania Farmer is given below:



I am sorry that it was not possible to award more prizes. Let's hope you all have better luck next time.

The prize winners are: Martha Little, age 9, Uniontown, Pa.; Amy Mae Myers, age 12, Clinton, N. Y.; Martha Weaver, age 11, Union Grove, Pa.; with honorable mention to Paul Greenfield, age 9, Jasper, N. Y.; Robert E. Hahn, age 12, Taneytown, Md.; Johnie Ed Smith, age 1[illegible], Taneytown, Md.; Fred Weicksel, a[illegible] 10, Christiana, Pa.

PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—Portland, Oregon, believes in living up to the City Beautiful idea. This is a grocery store any neighborhood would welcome, and the grocers do a record business.
2.—Joan of Arc costume, worn by Miss Anne Hamlin at a Washington charity ball.
3.—A puss from Paterson. A New Jersey winner in a show in New York City.
4.—Mrs. Gene Stratton Porter, killed in a recent auto accident in Los Angeles, writer of "Freckles" and many other well loved stories.
5.—A general view of Lourdes, a celebrated shrine in France.
6.—Commander Joel T. Boone, one of the foremost physicians in the United States Navy. He attended the late President Warren G. Harding in his last illness.
7.—A nineteen-year-old star pupil of a New York art school, modeling a copy of the Lincoln Monument in Newark, N. J.
8.—Bedtime stories before the Sand Man comes.
9.—The new year brings in a new name for the capital of Norway—Oslo is now the name of the city of Christiana.

The Child's Right to Work

With Proper Incentive He'll Enjoy Busy Moments

IN SPITE of fine theories and wonderful methods, where is there a child who loves to work? Where is the boy who willingly milks the cow and feeds the hens? Where is the girl who doesn't systematically slip out of the dishwashing?

So long as children are made up largely of human nature, this is going to be true. A right and reasonable amount of work is good for children. Mother is deserving of their help. "But where," wonders mother, "is the help when I work harder to make the children do a thing than I would to do it myself in the first place?"

The one best bet in getting children to work is to let them work when they want to. If John wants to wash the windows, let him. It will not do the windows any great harm and it may do John a lot of good. The fact that John is working happily and willingly is much more important than the streaks left on the glass by his incompetency.

Right Then Is the Time

The moment when Mary is consumed with a desire to make a cake is the psychological time to teach her the mysteries of cake-making. Some parents just naturally put off the children when they desire to work. The best time for a child to do a thing is when he wants to do it.

The next most important point in getting children to work is to work with them. Children do not usually like to work alone. The task looks unending. They loiter.

On the other hand, it is a great treat to work with mother if mother will join in a song, or tell a story, or guess conundrums, or take part in some of the many games that can be successfully carried on while the hands are busy. Try it. There is enough child left in most adults so that they enjoy a little fun if they once try it.

It's Not Sensible

There is no sense in mother insisting that she can work best with the children "from under foot" and then complaining because her girls do not help her with the housework. There is no sense in sending a small boy alone to the henhouse and then complaining because he forgets to water the hens. Go with him. Divide the nests and run a little competition gathering the eggs.

Did the farm child ever live who didn't hate to gather chips? Go with them, everybody carrying a basket according to size and strength, and get a cargo of chips at one trip. Then you will be sure of your supply of chips and everybody has had a good time.

There is no use in expecting children to be noticeably dependable or fond of work. Yet they ought to work. And they will, too, if mother sees to it that it is a pleasure to work with her.—Alice Margaret Ashton.

Refrigerator Schools

THE question of warm or cold school rooms is a pertinent one at present and it is never safe to assume that because teachers dress thinly the rooms are overheated. In the first place, not all teachers dress thinly; and in the second place they vary just as much in their susceptibility to cold as do the pupils. The only way to know about your own school, is to visit it. Even so, you might happen in when the temperature did not represent the average.

There may be overheated school rooms, but ours is not one of them. We call it the refrigerator, and not all the pupils seem to thrive in cold storage. Many have been, and are still sick, and one is in the hospital.

Cold Air Cranks Not Popular

I hear someone say, "You are a stupid bunch of patrons to stand for that sort of thing," and I freely admit that we are. But we are handicapped by one or two warm-blooded teachers who insist that it is warm enough. However, we are blessed with one or more good human women who don't enjoy freezing either themselves or their pupils, so I hope that between us we may save the situation before we have any funerals. But in the meantime we must continue to dress our girls warmly. **—Mrs. E. M. Anderson.**

A NEW PRIZE CONTEST

The subject is

Who Shall Hold the Purse Strings?

THE three best letters of not more than 300 words on the above topic will be awarded the following prizes:

First prize	$15.00
Second prize	10.00
Third prize	5.00

The letters must include suggestions about

(a) The division of the income between husband and wife.

(b) The problem of children's earnings and allowances.

The readers, and not the editors, will be the judges in this contest. A number of the best letters submitted will be published in the issue of February 7 and readers will be asked to vote for the one they consider best.

All readers are eligible, except the members of the Home Page Family whose portraits or biographies were published in the recent Who's Who numbers.

Contest letters must reach the Pennsylvania Farmer office on or before Thursday, January 22. Address them to the CONTEST EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Beauty Hints

DON'T look with envious eyes upon the attractive perfume counters where cosmetics are sold in such pretty jars and bottles at prices which make them a luxury indeed. Many of these are made with a base of the most simple compound, made fragrant and sold in containers which attract the eye as well as the pocketbook.

At home on the farm these same things may be had and, because they are unadulterated, are really much more beneficial. Grandmother kept her skin smooth and white with buttermilk, lemon or cucumber as best agreed with her. She "smoothed" her hands after a hard day's work by washing thoroly and drying in oatmeal or cornmeal, allowing as much of the powder to remain on as possible. She did this every day, not now and then, and, of course, her hands responded.

Be Your Own Hairdresser

The hairdresser will tell you that practically all of the hair tonics are made from refined coal oil (kerosene), perfumed to please the user. It may not be pleasant to endure the odor of this oil, but the use of it will often save one from becoming bald. If the head is wrapped up after the application, most of the odor will be kept in. Then of course, in a few hours, shampoo the hair.

When applying the oil, whether it be coal oil, crude oil, liquid vaselene or butter, heat it and part the hair, half an inch apart, seeing that it reaches the head and not the hair. You may laugh at the use of butter for the hair, but more than one old timer will tell you that butter with its animal oils and salt not only produces thick growth but keeps dark hair from turning gray. Nothing is better for the shampoo than shaved castile soap made into a jelly.

Face Powder and Perfume

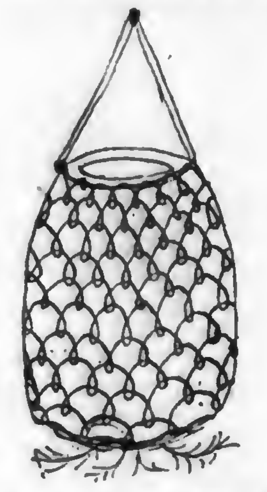
If you want a harmless face powder, which is not half chalk, use cornstarch. This will probably be too white for most skins but if a little sachet (which is usually quite dark) is added, the result will be both fragrant and becoming.

And for perfume, nothing quite seems to belong to some people so much as the "rosejar" fragrance. Place the underwear and handkerchiefs near it and the odor will stay in them a long time. Lavender is also good.—E. M. P.

Carrots for Cheer

VERY attractive and unusual little hanging baskets, giving a touch of living green in winter time, can be made from good-sized carrots and some of the strong shiny string used by florists.

The old-time way of making these tiny carrot baskets was to cut off the lower half of the carrot, leaving some four or five inches below the crown. The crown-end was then turned upside down and its core hollowed out carefully with a narrow-bladed sharp knife, until only a cup remained. Then holes were pierced on opposite sides of the rim of the cup, in which strings could be run, by which to hang it up, or else a smooth toothpick was forced thru the upper part of the cup, from side to side,—strings being tied to the two protruding ends. Either way lessened the capacity of the cup for holding the daily supply of water on which the up-curving growth of the feathery carrot leaves depend.



The newer way, which gives a genuinely artistic color effect, is made by taking a large-eyed coarse needle, which will carry the glazed string, and working a "blanket-stitch" net around the cup, beginning at the bottom by making a little center "mat," as in crocheting. The stitches should be taken quite loosely, but as evenly as possible, each row looping thru the one preceding.

Better Make More Than One

When the carrot is covered to the rim, the string should be carried around several times, and worked in and out of the top row of loops, to make a firm edge. To this is fastened the string handle by which the cup can be hung in a sunny window. The dark green network against the orange of the carrot makes a most effective contrast, and when—after the carrot-cup has been kept filled with water for three or four weeks—the delicate green fronds appear and begin to push upward thru the network and around the carrot, one's instant regret is that carrot-baskets had not been started for each window in the dining and living-rooms, as well as for gifts to shut-in friends.—Aldis Dunbar.

Lots of Fun

ONE cold stormy night a family of little girls was kept happy by a mother who hung a line across the living room, and allowed each child in turn, five minutes in which to hang the family wash, taking the garments from the clothes bag and putting them on the line.

The children having the neatest arrangement of clothing on the line and the largest number of garments hung were each given a big red apple as a prize.

INDIAN TAPIOCA

Per 2 tablespoons cornmeal allow 1 tablespoon each of butter, tapioca and cocoanut, ½ cup each of sugar and molasses and 1 quart boiling milk. Mix well, bake two hours and serve with sugar and cream—E.M.A.

WISE COUNSEL

Grandmother's Way Just As Good Now As in the Past

DEAR JOYE:—You tell me that you have had a terrible time with neuralgia and have a swollen face. Don't you know, child, that your trouble is from a tooth? Go to your dentist at once and have the tooth located and treated. Now do not delay. It means much to your health to keep your teeth in good order. Many ailments follow diseased teeth.

When I was a child, my mother used to take us to the dentist twice a year. There were three of us as you know,—your two uncles and I. Mother's methods surely paid, for now that I am past two score and ten, my teeth still serve me well. In all these years I have kept up the habits of care which my mother taught me, and which I tried to pass on to you. How have you grown so careless?

Making the Trip a Pleasure

Perhaps the incidentals of those trips to the dentist fixed them in my mind. I have told you about those days when Ma used to pack us into the big carry-all along with anything that could be found on the plantation to sell,—like apples, grapes, potatoes or chickens. Then we started to the town, five miles away.

We would sell the stuff in a neighborhood where the folks seemed always to have cash to pay. In those days anything in the way of garden vegetables sold readily, for they were scarce. I recall selling $6 worth of grapes in one trip, and that same summer Ma made enough money and over to pay $75 for a sewing machine.

And Those Peppermints!

What times we had traveling that old mountain road, sometimes fording the river! And coming home? I do not need to close my eyes very tight to see us all three in the back seat crunching crackers, or sometimes peppermint sticks. I guess it is for old times' sake that I still like peppermints, and that tho I have reached the bi-focal age, a gay striped stick of candy still holds a thrill.

But, Joye, it wouldn't if I hadn't kept my teeth sound!

With love to you all,

Mother.

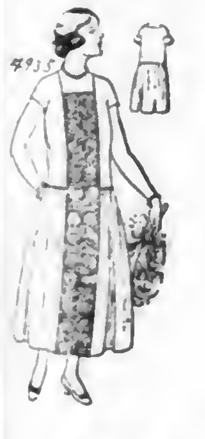
PRUNE WHIP

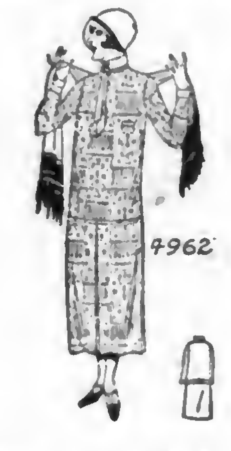
Soak 2 tablespoons gelatin in 1 cup of prune juice. Add ½ cup sugar, 2 cups boiling water ⅓ teaspoon lemon extract, 1 cup prunes cooked tender and mashed fine. Heat until the mixture thickens a little, add 2 stiffly beaten egg whites, beat well and serve very cold in custard or sherbet glasses.

Just the Girls This Time

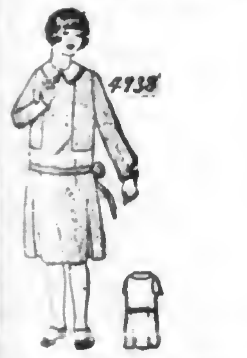
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

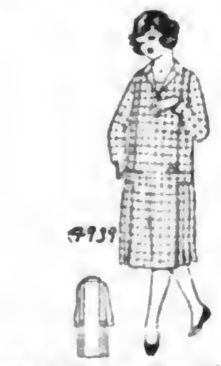
4935.—An Evening Frock.—Chiffon and metal embroidery is here shown. The style will be attractive in crepe de chine with lace or embroidery. Four sizes for juniors and misses: 14, 16, 18 and 20 years. A 16-year size requires 3½ yards of plain material 40 inches wide and 1⅔ yard of embroidery or lace nine inches wide, if made as illustrated. Without the sleeve puff 3¼ yards of plain material will be required. The width of the skirt at the foot is 2¼ yards. Pattern, 10 cents.





4962.—A Stylish Frock.—Figured silk, poplin, serge, broadcloth or satin could be used for this design. Three sizes: 16, 18 and 20 years. A 16-year size requires 3⅛ yards of 40-inch material. For collar, cuffs, pocket facing and belt of contrasting material three-eighths yard is required. The width at the foot is 1⅞ yard. Pattern, 10 cents.

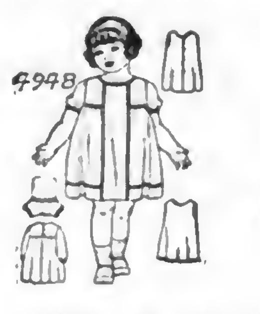


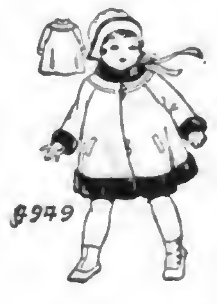


4938.—A Simple Model.—Wool mixtures, plaid suiting, and wash materials are good for this style. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2½ yards of 32-inch material, if made with long sleeves. If made with short sleeves 2¼ yards will be required. For collar of contrasting material one-quarter yard is required. Pattern, 10 cents.

4939.—For School.—Plaid woolen was chosen for this model with binding and facings of wool crepe in a matched shade. Pockets are inserted at the cross-slashes in the front. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅞ yards of one material 36 inches wide. If made as illustrated, one-quarter yard of contrasting material will be required for collar, revers facings and vestee. Pattern, 10 cents.

4948.—For a Small Girl.—This set comprises a neat dress, a simple petticoat in slip style, and comfortable one-piece drawers. The dress may be made of voile, batiste or crepe. It is also good for gingham and wool rep. The petticoat and drawers may be of nainsook or cambric. Five sizes: 6 months, 1 year, 2, 3, and 4 years. For a 2-year size it will require 1⅞ yard for the dress, seven-eighths yard for the petticoat, and three-quarters yard for the drawers, of 36-inch material. Pattern, 10 cents.





4949.—A Jaunty Coat.—Chiffon broadcloth, velour, or velvet would be pleasing for this model. The raglan sleeves are very comfortable. Tiny inserted pockets finish the front. Four sizes: 1, 2, 4 and 6 years. If made of one material two yards 40 inches wide will be required for a four-year size. If collar and cuffs and a facing at lower edge of the coat are of contrasting material three-eighths yard 54 inches wide will be required. To trim with bands of fur 3½ inches wide will require 2¾ yards. Pattern, 10 cents.

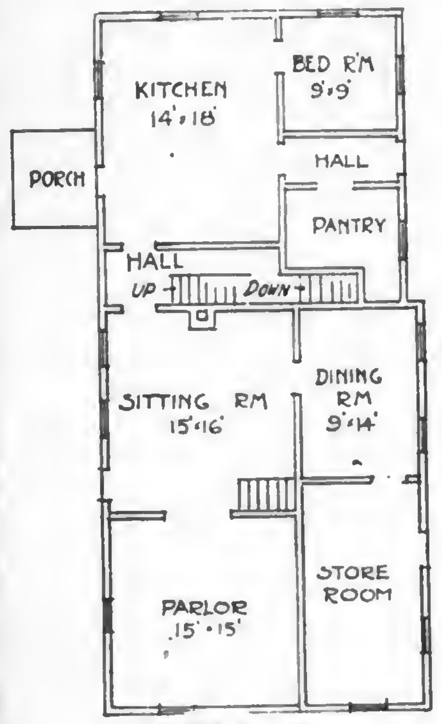
Making Over the House

Big Problems to Be Faced with Small Capital

Dear Editor:—I am like "troubled reader."' I want to make many changes in my house, but I haven't much to put in. If it costs too much, I shall have to wait.

My house is low ceilinged and was at one time used for two families. I should like to have my living room where my kitchen is now and to do away with a parlor that we never go into more than once a year, only to clean and air.



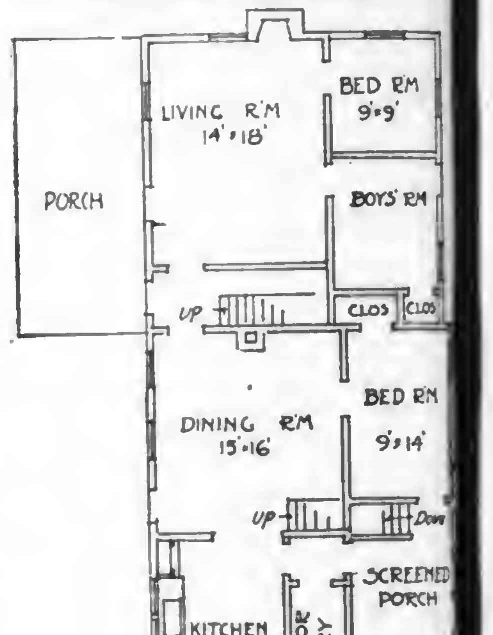
Old home

I have thought of a den for the boys and their books and papers, and also of having two downstairs bedrooms. There is running water in what is now the pantry.

The house has been in the family nearly 100 years, so it means much to us all.—V. L.

The remodeling can be done little by little, in this order: Fix up the kitchen first of all, and then do the other work as time and money permit. The suggested changes, as shown in the plan are:

1. Run a partition across the old parlor, dividing this room into kitchen and pantry or bath. Build a new chimney here; also, put in sink and cupboards. Place one new window in kitchen, and also one in pantry.
2. Make the storeroom into a screened porch, with wash room at one end.
3. Build a new cellar stairway going down from this porch.
4. Tear out the old cellar stairway, using the space for closets.
5. Throw pantry and hall together, making a room for the boys.
6. Build fireplace in living room.
7. Build new front porch.



After remodeling

If desired, the old pantry sink can be left in the boys' room to serve as a lavatory.—W. D. B.

Pin Money from Rabbits

I WONDER how many of Our Family raise rabbits for home consumption or pin money?

I have three Belgian hares, one male and two females, and during the past two years I have raised 240 pounds of rabbit meat. The only actual outlay has been for the old stock and the oats. I ship the young rabbits alive to a commission merchant in New York City, and raise three bunches to sell during the winter when they are thirty cents or more per pound.

The Pens and Nests

At our last county exhibit pen after pen of rabbits showed that many are being raised. Evidently many folks besides me have found that rabbit raising turns to account space and materials which are generally wasted.

The pens should contain twelve square feet of floor space, and if they can be made in a building, so much the better. Air and sunlight must of course be admitted freely. Indoor hutches are easier to make, and handier for the caretaker in bad weather. Mine are just thirty-two-inch high wire pens. Cases that canned tomatoes come in make good nest boxes if a hole five inches by six inches is cut in one end and the top made removable. Fill the box half full of soft grass and scatter some around the pen.

The Feed Used

The feed consists of greens, hay, grain, water and salt. The greens may be any fresh leafy weed, grass or vegetable. Cabbage should be used sparingly. I use green alfalfa and clover a great deal. Rabbits love mangels and other root crops, so I raise a few for winter feed when other green food is scarce. For hay I gather up the leafy chaff that is left on the steps or floor when the hay tumbles down. It pays to use oats with a good plump grain. A piece of rock salt is kept in each pen.

Meal Time Twice a Day

The rabbits are fed twice a day. In the morning a generous supply of chaff, a good handful of greens and a clean dish of water. In the evening a handful of oats and more chaff and water. The nursing does are given a dish of warm bread and milk in the middle of the day. (I use stale bread.) Young stock should be fed sparingly on greens at first. A good substitute is four parts beet pulp to one part bran.

Up to three weeks before shipping I feed one cup of oats to eight or nine rabbits, then gradually add finely cracked corn and reduce the oats till they are getting one cup of corn and one-half cup of oats.

The period of gestation for the doe is about thirty days and the young are weaned at six weeks, by which time they are big enough to eat well. I usually feed cracked or rolled oats for a few days.

You should read the United States Department of Agriculture bulletin on rabbit raising. (Farmer's Bulletin 1090.)—M. W.

Milder Musterole for Small Children

Thousands of mothers tell us they would not be without *Children's Musterole*, the new and milder form of good old Musterole especially prepared for use on babies and small children.

In the dead of night, when they are awakened by the warning, croupy cough, they rub the clean, white ointment gently over the child's throat and chest and then go back to bed.

Children's Musterole, like regular Musterole, penetrates the skin with a warming tingle and goes quickly to the seat of the trouble.

It does not blister like the old-fashioned mustard plaster and it is not messy to apply.

Made from pure oil of mustard, it takes the kink out of stiff necks, makes sore throats well, stops croupy coughs and colds. In jars, 35c.

The Musterole Co., Cleveland, Ohio

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

A Way to Fight Firebug

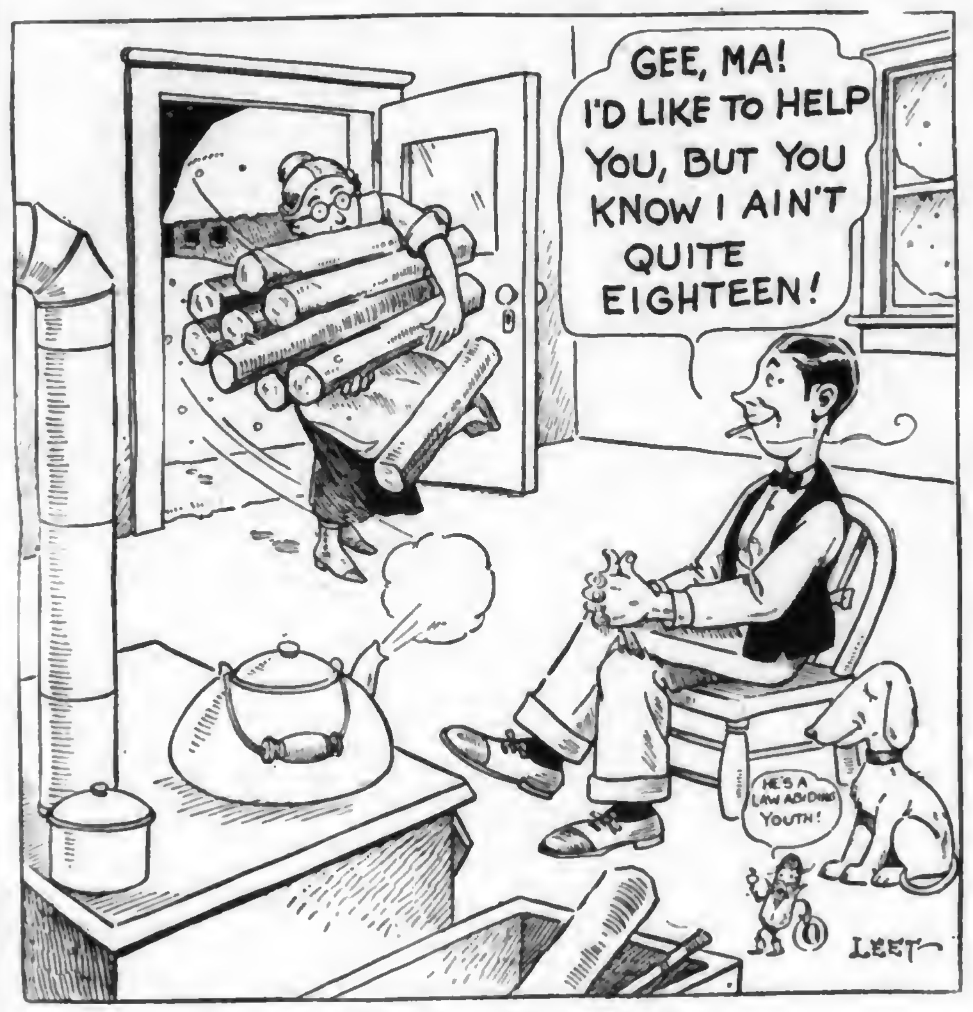
TO THE EDITOR:—Another large barn burned last night, December 7, which makes the fifteenth in western Berks County in the last few months. In many instances the livestock burned with the barn and nearly all the implements and grains.

We used to be proud of our large Pennsylvania barns, but they are all wrong from the standpoint of fire. Could I be the architect for future barns I would build altogether differently and with half the money.

I would build a horse and cattle barn one story high with no storage for hay and straw. Such a barn would not cost much and would be far better than the old style of basement stable,—better lighted and ventilated.

I would build a hay and straw shed separate and connected with the horse and cattle barn by a litter carrier track covered with metal roofing and metal sides. This way the hay and straw could be moved with very little energy.

The implement shed should be separate, also the granary, pigsty, etc. This way everything could be saved but the hay and straw should there be a fire. Having the eggs all in one basket is a dangerous proposition for a farmer. What do you think of the idea?—C. R. Bashore, Berks County, Pa.



GEE, MA! I'D LIKE TO HELP YOU, BUT YOU KNOW I AIN'T QUITE EIGHTEEN!
YOUTH!
LEET

Some think it might come to this!

Criticizes Forestry Plan

TO THE EDITOR:—Within the last nine months I have heard three of the officials of the Pennsylvania State Grange speak to rural people and each seemed imbued with the idea that we all should get back of the state project to spend twenty-five million dollars to buy forests for the state. They assumed that there will be a large income from these lands for school or other purposes, as lands owned by the state will be exempt from tax, etc.

We also note that our state educational agencies are equally ardent in solicitation for this investment of state funds. A year or two ago I took occasion to doubt the wisdom of this scheme in a little article printed by you and a reader came back at me with the statement that I was not posted on the benefits to be derived from this forestry plan.

Who Will Pay the Taxes Then?

I am yet ignorant, and do not see enough income from timber that is to be conserved to pay the interest on $25,000,000 and also pay the salaries and expenses of the host that would immediately become part of the sylvan machine. And again, when the state ownership exempts the land from tax, who is to pay the tax into the treasury that the individual owners of such lands now pay?

Why not in your pages, editorially or otherwise, turn the x-ray on this scheme and get and give the facts before the various state meetings are held? I would like to see one of our agricultural papers air this question. It seems especially timely in the face of the fact that the individual farmer is so burdened with excessive taxes on chopped-over and pole lands. Must he retire from the pleasure of woodlot ownership?—A. Woodlot Owner.

He Doesn't Agree

TO THE EDITOR:—I cannot agree with you that "Farmers have nothing to fear from the adoption of the child labor amendment."

Since the state has taken almost all authority from our school directors and multiplied clerks, stenographers, etc., over and over, our school taxes have been doubling and doubling until they are unbearable and we are not receiving value.

Just so, the passing of this amendment means absolutely no good that we cannot have locally and means additional taxes, when every one knows that we need lowered taxes.—D. P. Heckman, Cumberland Co., Pa.

The Farmer's Wife Knows

that trying to make a poorly equipped farm pay is a losing battle. What she may *not* know is this—that by borrowing money through

"The Mortgage That Pays Itself Off"

the farm can be put promptly on a profitable basis, with new equipment and improvements. *There will be no burden paying it off.* Easy semi-annual payments for 33 years and the farm is clear. Straight 6% interest plus 1% reduction of principal each year.

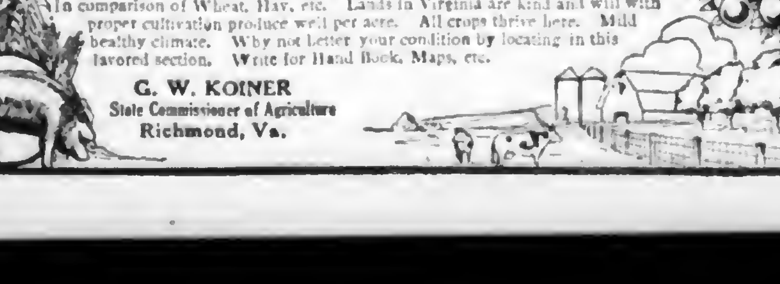
COME TO VIRGINIA



Lands in Virginia sell for 30% to 40% lower per acre and market price of farm products here sell 62% higher. This is on account of nearness to big Eastern markets. For instance, when Corn was selling for $1.00 per bushel in Virginia it was selling for 59 cents to 68 cents in Western States—same ratio in comparison of Wheat, Hay, etc. Lands in Virginia are kind and will with proper cultivation produce well per acre. All crops thrive here. Mild healthy climate. Why not better your condition by locating in this favored section. Write for Hand Book, Maps, etc.

Market Summary

THE potato market in the large eastern terminals was about steady Friday, the 26th, but the cold weather resulted in very light buying. The demand was slow and trading limited. On the Baltimore market there were too few sales reported to establish a market. Pennsylvania round whites were quoted at $1.75 per 150-lb. sack, in Pittsburgh. There were no sales of Pennsylvania stock reported in the other markets. Maine Green Mountains brought $1.10@1.15 per 100-pound sack in Boston. New York round whites sold mostly at $1.65@1.85. The shipments for the country on Tuesday and Wednesday amounted to 754 cars. Maine was the leading shipper, supplying 279 cars, Pennsylvania rolled 12 and Minnesota 61.

Fruits and Vegetables

Carlot offerings of fruits and vegetables were fairly light on the Philadelphia market. The cold weather and the effect of the holiday combined to make trading very dull. Lettuce and peas were somewhat weaker, while spinach and kale were strong. Other commodities showed very little material change. There were practically no fresh offerings of nearby fruits and vegetables on the nearby market, trading was limited and the demand slow. Sweet potatoes showed a slightly stronger tone but there was little change in price. Pennsylvania mushrooms were firm and moved well.

Fancy Eggs Firm

Fancy nearby eggs of good size are moving well on the New York market. Much of the stock, however, is of mixed sizes and sells slowly. The quotations on Wednesday were as follows: Jersey and other nearby hennery whites, closely selected extras, 69@70c, average 67@68c, and brown fancy to extra fancy 66@68c. The egg market in Philadelphia is firm with good grades selling well. Nearby extra firsts sold at 60@61c on Friday and firsts at 56½c per dozen. The live poultry market was unsettled on account of the epidemic.—W. R. W.

Dairy Markets

PHILADELPHIA butter market firm with advance on top scores. Some doubtful extras were available at 45c but holders of full scoring goods were asking premiums in some quarters. Inquiry was good and trade quite active at the close. There was little change in medium and undergrades.

Cheese.—All styles of fresh and held cheese were firm and asking prices slightly higher. On the whole trade was quiet but dealers were optimistic. Most floors are about cleared of fresh goods.

New York

Butter.—Trading was fairly active for Saturday and prices were advanced ½c. Market ruled firm and at the close some dealers were holding for premiums.

Cheese.—Trading was slow and market continued in firm position. Higher western boards further strengthened market here and some dealers were reluctant to sell western styles at the inside prices. Cured stocks were in best supply and demand.

Eggs.—Market steady on fresh, storage firm. On the Mercantile Exchange December 27 there was one sale firsts, 58c; 4 sales, 56c; one sale refrigerator firsts, 43c; one sale refrigerator seconds, 41½c. Extra firsts offered 63c; bid 59c; firsts, 57@59c; bid, 56@57c.

Boston

Butter.—Sentiment was firmer and all grades of fresh butter and whole milk storage butter and the tone of the market on storage centralized cars continued firm with some dealers asking premiums of one-half to one cent on the cars showing fine quality. The main buying interest apparent was in storage centralized cars with other classes of goods moving in a small way.

County News and Comment

ALLEGHENY COUNTY, PA.—Winter weather, reports of ten degrees below and about three inches of snow. A genuine Christmas of the olden time model was ours. Several cases of sickness due, no doubt, to sudden changes of temperature. Stock wintering well. No reports of the chicken plague as yet. Prospects are bright for Allegheny County to get several miles of improved road the coming season. Still some corn to husk and fodder to shred. No fall plowing of any consequence done.—C. K., Dec. 24.

CARBON COUNTY, PA.—Weather very favorable last month with enough rain for fall plowing. Corn stover about all in and some crushing done. General fall work about all done and butchering is on the program. Many heavy hogs being slaughtered for home use. Hunting season just closed and a large number of deer reported killed in the county. There has been no snow to cover the fall seeding of wheat and rye and it is now raining. Our Pomona Grange held its quarterly meeting in Lehighton, December 6. Prof. Gordon, of State College, was the principal speaker. Butter, 55c; eggs, 84c; hogs, dressed, 14c; chickens, 25c; wheat, $1.60; rye, $1.15; oats, 70c; corn, 1923 crop, $1.75; potatoes, 90c; apples, $1.50. Extending the greetings of the season to all the readers.—L. E. B., Dec. 18.

CLINTON COUNTY, PA.—Winter arrived December 1 with a fine fall of snow for the hunters; some camps shot their quota of bucks the first few days. According to reports less deer killed this year than last. Bear seem to be more plentiful than for many years. We need more rain before winter sets in; waters still very low. A few fields of corn are untouched. Not much fall plowing done on account of dry weather. Butchering will soon be ended among the farmers, many thin hogs being slaughtered on account of poor quality of corn and a shortage on some farms. Farmers Co-operative Association meeting at Lock Haven, December 30. Lock Haven Poultry Association meeting January 7-10. Farm Bureau meeting January 10. Farmers holding wheat for higher price.—W. C. W., Deec. 17.

DAUPHIN COUNTY, PA.—It is cold at this time and we have been having much stormy weather. Quite a lot of corn still to be husked. Condition of grain fields, due to very dry fall, is not very good. Much freezing and thawing has been harmful also. Ground in good condition for fall plowing and much is being done. Roads in fine condition. More Christmas trees have been cut in this county than ever before. Agricultural exhibits held at Lower Paxton Vocational School and at Hershey during the past month. These exhibits have excelled previous ones in both quality and quantity. Prices for products: wheat, $1.60; corn, $1.10; oats, 60c; hay, $17; butter, 50c.—I. F. M., Dec. 20.

FRANKLIN COUNTY, PA.—An unusually large number of farmers are killing hogs this year instead of selling them on the hoof. They claim they can make more money by retailing pork in nearby towns and cities. County farmers have not felt the shock of glutted market in potatoes, because comparatively few have shipped this year's crops. Only two cars have left the county. Farmers report that they are selling potatoes in small lots at $1 a bushel. Tomato growers are engaged in plowing now to control cut worms. It is expected that 2000 acres will be planted in tomatoes in the county during the next season. Six Franklin County hogs will be on exhibition at the state show at Harrisburg in January. The exhibits will be composed of three Durocs and three Hampshires.—C. R. N., Dec. 23.

FULTON COUNTY, PA.—We are having zero weather. Waters are very low owing to dry weather. Not as much fall plowing done as usual. Farmers are baling hay and getting in wood for winter. Very little hay has been marketed, grain has made but little growth owing to the drought. Many young farmers are planning a sale in the spring and expect to move from the farm, as taxes are high and prices received for farm produce low. Our teachers' county institute was held in McConnellsburg recently. County Superintendent Griffith was fortunate in obtaining an able body of instructors and entertainers. Market quotations: eggs, 55c; butter, 35c; chickens, 16c; turkeys, 30c; dressed pork, 13c; wheat, $1.65.—T. H. T., Dec.23.

UNION COUNTY, PA.—The farm census, which is now being taken, shows that very few farmers keep books of receipts or expenses, and only a few really know at the end of the year how they are off financially for the year. Very little work other than chores is being done, except to get home wood for fuel. Killings hogs for the year's pork has mostly been done to save the corn crop which is a short one on most farms. Some demand for oats at 50c a bushel. Most of the wheat has been sold at $1.50, tho a few farmers are holding theirs for a better price. Pork has dropped from 16c in the fall to 13c, yet not many hogs are being fed for sale. Very few extra cows have been bought to feed over winter. More farm sales of stock this fall than the writer ever knew of before this on account of scarcity of corn and shortage of money. Some good farms are still without tenants for next spring as very few young farmers are available. Feed will be higher next year for those who must buy, yet farmers should soon come to their own in payment for their risk and work. That the year 1925 may be a more prosperous one for all is the wish of the writer.—J. N. G., Dec. 24.

YORK COUNTY, PA.—Despite the fine weather of the fall there still remains much work to do. Farmers at present are engaged in hauling manure and corn fodder and in cutting firewood for the coming year. Before the cold wave of December 20 many farmers were taking advantage of the mild weather to get some plowing done for the spring crops. Prices: turkeys, 35@50c; chickens, 20c; eggs, 58c; wheat, $1.75; potatoes, 90c; oats, 55c; milk, $2.50 per 100 lbs.; butter, 40c; middlings, $2.25; bran, $2; 24 per cent dairy feed, $2.90.—W. K., Dec. 23.

Delaware Corn Show

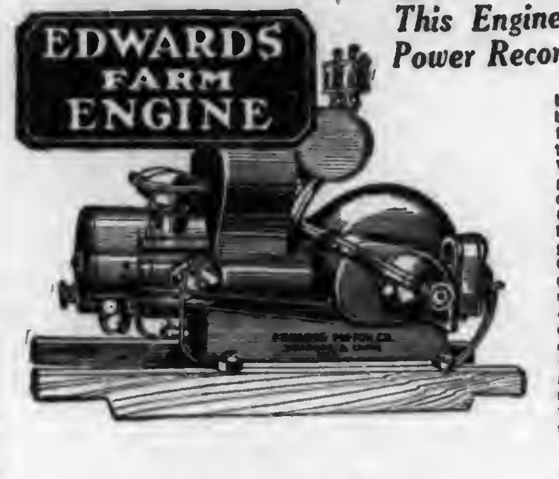
CORN growers of Pennsylvania, New Jersey and Maryland are invited to compete with Delaware's best corn growers for prizes in the Interstate Class at the seventeenth annual State Corn Show to be held in Lewes, Delaware, January 6-8, under the auspices of the Delaware Corn Growers' Association. Premium lists may be secured by writing to the Secretary, Delaware Corn Growers' Association, Newark, Del.

Willie Hardcase—Maw, that dentist you sent me to that was advertised as painless wasn't.

Mother—He wasn't?

No. I bit his finger and he yelled just like any other dentist.

Wood Sawing Records Broken



This Engine Has Broken Many Farm Power Records—World of Power—

C. E. Gilbert, Frost, Ohio, says: "I bought my Edwards engine in 1920. Have been sawing wood right beside an 8 H. P. engine. The 8 H.P. sawed 24 cords in the same time that I sawed 32 cords. We both used the same size saws. I can pull a pair of 8-in. burrs wide open and elevate the feed 8 ft. above the mill." G. N. Jerd of Vermont says: "Would not buy any other engine at one-half the price." Clarence Rutledge of Ontario says: "Have given my Edwards engine four years' steady work and like it fine. Runs 28" saw, 8" grinder, ensilage cutter, and does all the chores. I have had ten other engines. The Edwards beats them all." Others say: "Fills a long felt want for us farmers." "Years of hard service and not a cent for repairs." "A little giant for work." "Has anything beat I ever saw in the shape of an engine."

One Engine—1½ to 6 H. P.
Change Power As You Change Jobs

Let me tell you how the Edwards engine is different from any other engine—how this one engine will fill your silo or run your washing machine or do practically every power job on your farm—how it is changed from a 1½ H.P. all the way up to a 6 H.P.—how it saves fuel—starts without cranking—how it does not have to be fastened down—does not vibrate—is light and easy to move from one job to another, yet is rugged and durable, and how it has made good with farmers for eight years. Don't buy an engine until you get the facts about this marvelous engine. There is no obligation. Write now.

Get the Facts about
MY FREE TRIAL OFFER

You risk nothing. Just send me your name and address, and without the slightest cost or obligation, I will send you all of the facts about this remarkable engine, tell you how it will do practically every power job on your farm, and give you all of the details of my liberal free trial offer. Write today.

NEW LAMP BURNS 94% AIR
Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, **J. O. Johnson, 642 N. Broad St., Philadelphia,** is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

The Light in the Clearing

(Continued from page 17)

the book and put it on the table and ran and hid behind the barn.

By and by I saw Uncle Peabody coming down the lane with the cows, an ax on his shoulder. I ran to meet him with a joy in my heart as great as any I have ever known. He greeted me with a cheerful word and leaned over me and held me close against his legs and looked into my eyes and asked:

"Are you willin' to kiss me?"

I kissed him and then he said:

"If ye ever hear me talk like that ag'in, I'll let the stoutest man in Ballybeen hit me with his ax."

I was not feeling well and went to bed right after supper. As I was undressing I heard Aunt Deel exclaim: "My heavens! See what that boy has done to my Indian book—ayes! Ain't that awful!—ayes!"

Next day the stage, on its way to Ballybeen, came to our house and left a box and a letter from Mr. Wright, addressed to my uncle, which read:

"Dear Sir—I send herewith a box of books and magazines in the hope that you or Miss Baynes will read them aloud to my little partner and in doing so get some enjoyment and profit for yourselves.

"Yours respectfully,
"S. Wright, Jr.

"P. S.—When the contents of the box has duly risen into your minds, will you kindly see that it does a like service to your neighbors in School District No. 7?

S. W., Jr."

"I guess Bart has made a friend o' this great man—sartin ayes!" said Aunt Deel. "I wonder who'll be the next one."

I REMEMBER that I tried to walk and talk like Silas Wright after that day. He had a way of twisting little locks of his hair between his thumb and finger when he sat thinking. I practised that trick of his when I was alone and unobserved.

One day I was walking up and down, as I had seen Mr. Wright do, and talking to my friend "Baynes," when Aunt Deel called to me that I should bring the candle molds from the shed. I was keeper of the molds and greatly enjoyed the candle-making. First we strung the wicks on slender wooden rods—split and whittled by Uncle Peabody and me as we sat down by the stove in the evening. Then the wicks were let down into tin molds, each of which ended in a little inverted cone with a hole thru its point. We carefully worked the wick ends thru these perforations and drew them tight. When the mold was ready we poured in the melted tallow, which hardened in a few minutes. Later, by pulling the wooden rods, we loosened the candles and drew them out of the molds. They were as smooth and white as polished alabaster. With shears we trimmed the wick ends. The iron candlesticks were filled and cleaned of drippings and set on the little corner shelf above the sink.

When night fell again and the slender white shaft, rising above its base of iron, was crowned with yellow flame, I can think of nothing more beautiful in color, shape and symbolism. It was the torch of liberty and learning in the new world—a light-house on the shore of the great deep.

The work of the day ended, the candles were grouped near the edge of the table and my aunt's armchair was placed beside them. Then I sat on Uncle Peabody's lap by the fire or, as time went on, in my small chair beside him, while Aunt Deel adjusted her spectacles and began to read.

At last those of wearied bones and muscles had sat down to look abroad with the mind's eye. Their reason began to concern itself with problems beyond the narrow limits of the house and farm; their imaginations took the wings of the poet and rose above all their humble tasks.

I recall how, when the candles were lighted, storyteller, statesman, explorer, poet and preacher came from the far ends of the earth and poured their souls into ours. It was a dim light—that of the candles—but even today it shines thru the long alley of these many years upon my pathway. I see now what I saw not then in the darkness, ignorance and poverty with our little party in the caravan. Crowding on, they widened the narrow way of their stern religion.

At first we had only The Horse Farrier, The Cattle Book, The Story of the Indian Wars—a book which had been presented to Aunt Deel by her grandmother, and which in its shroud of white linen lay buried in her trunk most of the time for fear harm would come to it, as it did, indeed, when in a moment of generosity she had loaned it to me. The Bible and the St. Lawrence Republican were always with us.

Many a night, when a speech of Daniel Webster or Henry Clay or Dewitt Clinton had pushed me to the edge of unconsciousness, while I resisted by counting the steel links in the watch chain of Uncle Peabody—my rosary in every time of trouble—I had been bowled over the brink by some account of horse colic and its remedy, or of the proper treatment of hoof disease in sheep. I suffered keenly from the horse colic and like troubles and from the many hopes and perils of democracy in my childhood. I found the Bible, however, the most joyless book of all, Samson being, as I thought, the only man in it who amounted to much. A shadow lay across its pages which came, I think, from the awful solemnity of my aunt when she opened them. It reminded me of a dark rainy day made fearful by thunder and lightning. It was not the cheerful thing, illumined by the immortal faith of man which, since then, I have found it to be. The box of books changed the whole current of our lives.

I remember vividly that evening when we took out the books and tenderly felt their covers and read their titles. There were Cruikshank's Comic Almanac and Hood's Comic Annual; tales by Washington Irving and James K. Paulding and Nathaniel Hawthorne and Miss Mitford and Miss Austin; the poems of John Milton and Felicia Hemans. Of the treasures in the box I have now in my possession: A life of Washington, The Life and Writings of Doctor Duckworth, The Stolen Child, by "John Galt, Esq."; Rosine Laval, by "Mr. Smith"; Sermons and Essays, by William Ellery Channing. We found in the box, also, thirty numbers of the United States Magazine and Democratic Review and sundry copies of the New York Mirror.

"Ayes! I declare! What do you think o' this, Peabody Baynes!" Aunt Deel exclaimed as she sat turning the pages of a novel. "Ye know Aunt Minervy used to say that a novel was a fast horse on the road to perdition—ayes!"

"Well she wasn't—" Uncle Peabody began and stopped suddenly. What he meant to say about her will never be definitely known. In half a moment he added:

"I guess if Sile Wright recommends 'em they won't hurt us any."

"Ayes! I ain't afraid—we'll wade into 'em," she answered recklessly. "Ayes! we'll see what they're about."

(To be continued next week)

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

GOING DOWN BEHIND.—I have bunch of pigs from three to five months old that are afflicted with what our local veterinary calls kidney worms. The first symptom they show is loss of control of their hind legs, they knuckle back, then they finally go down behind and their hind legs seem to be paralyzed. I lost seven that seem to have been paralyzed in front legs same as behind. These pigs have been out on good pasture, including alfalfa pasture. They eat good and seem healthy otherwise. Would like to know what the trouble is and remedy for same.—R. W. McN., New Castle County, Del. Paralysis of the hind quarters of hogs is still puzzling us veterinarians as to just the cause, and also a remedy for it. The old idea was kidney worms, but this is not the most common cause, feeding too much corn, also lack of minerals in their ration, but many such cases are caused from lack of vitamins in the ration. Try giving each pig a teaspoonful of cod liver oil in feed once or twice daily. Also let them have access to equal parts of crushed limestone rock and salt, or equal parts by weight of air-slaked lime and bone meal is a good mixture to keep before them. Instead of feeding much corn, give them some oats.

ACUTE INDIGESTION. — My neighbor recently lost two fine cows, both were seemingly in good health at 11:00 A. M., and both were dead by 3:30 the same day. There are no poisonous weeds in their pasture lot as it is high, dry land, and has been used for cattle pasture for twenty years. We cut down a small black wild cherry tree in the pasture, my eight cattle browsed some on the leaves, but six of the cattle were not affected. My neighbors tell me eating these leaves caused the death of my cattle—D. L., Franklin County, Pa. The most likely cause of their death was eating the leaves; however, black wild cherry leaves are not considered very poisonous.

BROOD SOW KILLS CHICKENS.—Will you please tell me how to stop a hog from eating chickens? I have a brood sow that eats chickens. A. F. A., Westmoreland County, Pa. After a hog contracts the habit of killing chickens the animal can never be trusted; therefore, I know of no better plan than to keep the chickens from occupying the same lot or pen, with the sow.

HOLE IN SIDE OF TEAT.—I have a three-year-old cow that has a hole in the side of one teat. Please tell me what to do for her.—S. E. E., Tioga County, Pa. When dry, have your veterinary operate on teat.

COUGH.—I have a pig four months old that seems to be in good health, but she has a cough. Please tell me if she will be all right for butchering.—L. S., Wyoming County, Pa. Mix equal parts of powdered licorice, ginger, gentian, common salt, together and give her half a teaspoonful in soft feed twice a day. If left alone and well fed she will fatten and be fit for market.

FOOT SORE—I would like to know how to treat one of my cows. She seems to be stiff in front, and is growing thin.—P. D., Cumberland County, N. J. Stand her in wet clay for two hours daily, give her a teaspoonful of nitrate of potash in drinking water twice a day.

Buy State Show Prize Swine at AUCTION
150 Head of the Best 150

One hundred fifty head of hogs, the finest specimens of the Keystone State's Swine Industry, will be sold at auction at the State Farm Products Show, January 19-23, 1925. The assembling of this number of swine constitutes an array of brood sows seldom if ever equaled in the East. Each animal entered in the show and sale a prize winner or its equal in county or district shows of the state. Pennsylvania hogs are very properly gaining the reputation of supplying the answer in the pork barrel. Pennsylvania stood second among all states in the union in total number of Ton Litters in 1924. Start with the right kind in 1925. Every animal entered in the show sells. An opportunity to invest in the country's finest hogs at your own price.

Equipped With the Famous WICO Magneto

Easy! Now Only $5.69 Puts a Witte to Work

GET away from high-priced hired help—get away from the hard, back-breaking chores with the rugged, dependable WITTE Throttling-Governor Engine. There's an extra profit of $500 to $1,000 every year you have this engine on your place doing the hard jobs. WITTE ENGINES deliver 50% surplus power with a big saving in fuel. So simple that a boy can operate it. Trouble-proof, too — the WITTE works every day in any kind of weather. Easily moved from job to job, it answers every power need on your place.

Fully Equipped The WITTE has many exclusive features not found on any other engine, such as the celebrated WICO Magneto, the best system of high tension ignition known. Far superior to the old-style battery engine — dependable and economical. A new device makes starting easy in the coldest weather — just a turn and away it goes. The perfected motor-style carburetor and WITTE Hot Spot get the last bit of power out of every charge of fuel. Any speed you want by merely turning a thumbscrew on the Witte Speed Regulator. The WITTE ENGINE is scientifically designed and ruggedly built to last a life-time.

The Famous Thirty Year WITTE Crankshaft Guarantee

WITTE Crankshafts are Guaranteed absolutely against breaking, bending, warping crystalization and wear for thirty (30) years, regardless of nature of work done, climate or any other conditions. ~ Ed. H. Witte, WITTE ENGINE WORKS.

I know of no other engine crankshaft with such a guarantee. WITTE Crankshafts are drop forged and heat treated in oil. They are ground to a glass finish on precision lathes to an accuracy of one-thousanth of an inch. Is it any wonder that WITTE Throttling-Governor Engines are known all over the world for their continuous superior performance?

Uses Kerosene Gasoline, Distillate or Gas *(No Special Attachments Needed)* The WITTE uses any fuel — kerosene, gasoline, distillate or gas. Costs less than 2 cents an hour to run on a full load. No need to bother about fuel prices—always use the cheapest and get the best results—50% surplus power.

Sold Direct From Factory to You — Save 20 to 40 Per Cent I employ no salesmen — WITTE Throttling-Governor ENGINES come from my factory direct to you at the lowest price. You can save as much as 40% by buying direct.

Easy Terms I make it very easy for anyone to own a WITTE—if you want easy terms you can have them. Take a year to pay if you want to—just suit yourself on time.

90 Days FREE Trial on Any Size WITTE Throttling-Governor ENGINES come in all styles and sizes from 2 to 25 H-P. So confident am I that this engine will make you money and is the best and cheapest power you can buy, that I will gladly let you try a WITTE for 90 days at my risk. And if for any reason it's not right, I simply say "I'LL MAKE IT RIGHT AND IT WON'T COST YOU A CENT."

Write Today for My New Engine Book—FREE

Write for It Today! I want to send you my new engine book — the most interesting book about farm power that you have ever read. Fully illustrated. Tells all about this remarkable engine and how easily you can get it to do the hard jobs on your place. Shows details of equipment, many exclusive features and hundreds of vital points about the application of power to your farm. I'll also send you letters from my customers all over the world—over 150,000 of them—people who are actually using WITTES on hard jobs and who know how it can work.

Absolutely No Obligation

Write me today, a postal will do or clip out the coupon and send it in. You are under absolutely no obligation by writing me, and my big book is sent at once, all postage paid.

Give your children this opportunity

Any girl who has a good piano in her home, and plays well—is assured of a happiness and popularity that nothing else can supply. Hers is the exquisite delight of creating beauty through music.

Most people are fond of music—and yet, how few can play the piano! No doubt many of these folks, who love music but cannot play, lacked the opportunity to learn. Others, perhaps, had pianos that had seen better days—pianos that failed to inspire them.

You have it in your power to give your children an opportunity to know music and to play it. If your home is without music, buy a good piano—a Weaver. If you have a piano that has fulfilled its service, buy a new one—a Weaver—and realize why the great musicians place this instrument among the leading pianos in artistic accomplishment.

The beautiful tone of the Weaver Piano, rich and full from deepest bass to highest treble, is well known in the piano world. Its wonderful action—cascading brilliant, delicate notes under the lightest touch, or crashing out majestic cords under vigorous fingers—is built to last a lifetime.

Truly the Weaver is a wonderful investment, and a wonderful addition to any home. Write to-day for the name of the dealer nearest to your vicinity. Ask for the interesting Weaver catalog. Convenient terms easily arranged—and a liberal allowance made on your present piano.

The 1924 Potato Champions

Thirty-three Men Qualify for the 400-Bushel Club

THE final checking of production records for 1924 shows that thirty-three Pennsylvania growers grew over 400 bushels of potatoes on a measured acre of ground. As nine of these men produced over 400 bushels on an acre last year, the current season's contest has added twenty-four new names to the membership list of the Keystone 400-Bushel Potato Club.

R. E. Briggs and son, Ray, of Nescopeck, Luzerne County, had the largest yield of the year, 637.6 bushels. This is not the first time Mr. Briggs and his son have grown a 400-bushel potato crop. In 1923 they grew 495 bushels on a measured acre and the year previous they qualified for membership in the club with 418 bushels.

Honors to the High and Low Men

Mr. R. E. Briggs automatically becomes president of the 400 club for the coming year, this honor being conferred upon the growers having the highest yield in the state. Walter A. Collins, of Bucks County, who had the smallest qualifying yield, becomes secretary.

Alex J. Mitchell and Jacob Hefft, both of Luzerne County, ranked second and third in this year's contest with 621 and 524.3 bushels respectively. Both were members of the 400-bushel club last year.

Mr. R. E. Briggs, the new president and high man of the club, will have his name engraved on the large potato growers' shield that is kept at State College. The shield is a large reproduction of the keys or medals which are awarded to the individual members. On the back of it are engraved the names of the men who lead in yield of potatoes per acre each year.

The following men have led the state during the last six years in bushels per acre.

1919	Oscar Lichtenwalner, Lehigh Co.	519
1920	John Schrope, Schuylkill County	512
1921	L. K. Peters, Lehigh Co.	510
1922	W. D. Worman, Northampton Co.	479.5
1923	Jacob Wile, Montgomery County	532.4
1924	R. E. Briggs & Son, Luzerne Co.	637.6

All Used Disease-free Seed

Every grower who qualified for the 400-bushel club this year used disease-free seed, according to E. L. Nixon, State College plant disease extension specialist, and all but one sprayed consistently.

Clarence L. Welsh, of Luzerne County, was the only man who didn't spray. His yield was 451.7 bushels and the plant disease men think that he might have been high man in the club if he had sprayed. They base this opinion on the fact that records kept on 174 farms in sixty-four Pennsylvania counties show the average increase in production due to spraying to have been 40.4 per cent.

Following is a complete list of the thirty-three men who qualified for membership in the Keystone 400-Bushel Potato Club during the season of 1924.

LUZERNE COUNTY.—R. E. Briggs, 637.6 bushels; Alex J. Mitchell, 621 bushels; Jacob Hefft, 524.3 bushels; Z. F. Schooley and Son, 461 bushels; Clarence L. Welsh, 451.7 bushels; and R. W. Garranhan and Son, 441.6 bushels.

BERKS COUNTY.—John De Long, 416.6 bushels; and Milton Klapp, 403.3 bushels.

CENTRE COUNTY.—A. C. Kepler, 417 bushels, and Penn State College Farms, 409.8 bushels.

ERIE COUNTY.—A. C. Harwood, 476 bushels, and T. H. Barney, 438 bushels.

INDIANA COUNTY.—S. L. Fyock and Son, 451 bushels, and Clark Pollock, 431 bushels.

SUSQUEHANNA COUNTY.—John A. Fraser, 424 bushels, and Jesse C. Morse, 404.1 bushels.

Records of Which to Be Proud

UNION COUNTY.—R. E. Musser, 408.7 bushels, and J. L. Reitz, 403 bushels.

WARREN COUNTY.—R. H. Duntley, 455 bushels, and G. N. White, 434 bushels.

ARMSTRONG COUNTY, M. R. Ankeny, 448 bushels; BRADFORD COUNTY, Sloan and Cobb, 446 bushels; BUCKS COUNTY, Walter A. Collins, 400.1 bushels; BUTLER COUNTY, Howard Fox, 481.1 bushels; CHESTER COUNTY, Donald Snook, 470.2 bushels; FRANKLIN COUNTY, E. S. Grim, 443.6 bushels; LACKAWANNA COUNTY, A. W. Wiggins, 461.6 bushels; LEHIGH COUNTY, Milton D. Leiby, 452 bushels; POTTER COUNTY, Pat Grimes, 415 bushels; SCHUYLKILL COUNTY, I A. Seltzer, 465.8 bushels; WAYNE COUNTY, R. B. Simons, 405 bushels; YORK COUNTY, H. G. Hall, 414 bushels; WESTMORELAND COUNTY, Rufus Hofelt, 445.3 bushels.

Muffler for Gas Engine

I have a farm electric plant and would like to devise some way which will reduce, if not eliminate entirely, the noise made by the exhaust of the engine. The noise is unpleasant and it interferes with my radio. I have a good muffler on the exhaust and have tried other ways and none seems to have much effect, at least not on the radio set. —W. A. G., Berks Co., Pa.

The exhaust on an engine can be very readily muffled by means of a barrel filled with stones and buried under the ground. The exhaust pipe may be led some distance to this barrel. This usually deadens the sound entirely.

I am at a little loss to know just how this could affect your radio set unless you mean that you are using three of the light plant battery cells to run your radio set, and you hear the noise from the engine when you listen in on the radio while the plant is charging the batteries.

There is nothing that will kill this noise, as you get the impulse of every power stroke thru the generator. I suggest that you do not use the radio set while the generator is charging the battery, or else secure a smaller storage battery for your radio set independent of the farm electric plant. You can charge this battery with the plant generator, however, by determining the poles and coupling direct with a socket in the house while the plant is running. To determine the polarity, insert a plug in a socket, leaving the two wires free. Insert these wires in water. Bubbles will rise from the negative wire. This should be attached to the negative side of the battery in charging.

The use of the separate battery is certain to eliminate the noise of the plant, but I feel certain that you can arrange not to use the set while the plant is running.—Frank A. Meckel.

Keystone Fruit Growers' Round Table

Pennsylvania Orchardists Study Their Problems during Horticulture Week

By S. W. FLETCHER

Staff Contributor and Adviser

THE first Horticulture Week at State College, December 8 to 13, was so successful that it is likely to become an annual event. Nearly one hundred fruit growers were present, coming from twenty-five counties. The attendance of vegetable growers, however, was small. The forenoons were devoted to discussions and the afternoons to practice and demonstrations. It was interesting to compare the different methods of pruning peaches as demonstrated by several growers in the college orchard.

The unique feature of the occasion was the absence of set speeches. Round table discussions prevailed thruout the week, and this interchange of experience was so valuable as to justify fully the policy for future meetings.

A Night Not Soon to Be Forgotten

The "Hort banquet" on Thursday night was an outstanding event. All the food was grown on the college farm and most of it by the Horticultural Department. It was prepared and served by horticultural students.

An old fashioned spelling bee, in which only horticultural words were used, added to the zest of the occasion. It was considered a joke on Dean Watts when he was spelled down early in the game, thru the omission of the hyphen in "root-stocks.") He has protested this decision.)

The apple judging contest was won by J. E. Linde, of Orefield, Lehigh County, representing the visitors, and R. H. Sudds, '25, of the students. The new concrete storage cellars were an object of interest to many growers who are faced with the storage problem. Next year it is proposed to direct the program entirely along the line of "What is New in Horticulture," making it a "Keep Posted" week.

Following are random notes on some of the discussions:

Spraying Problems

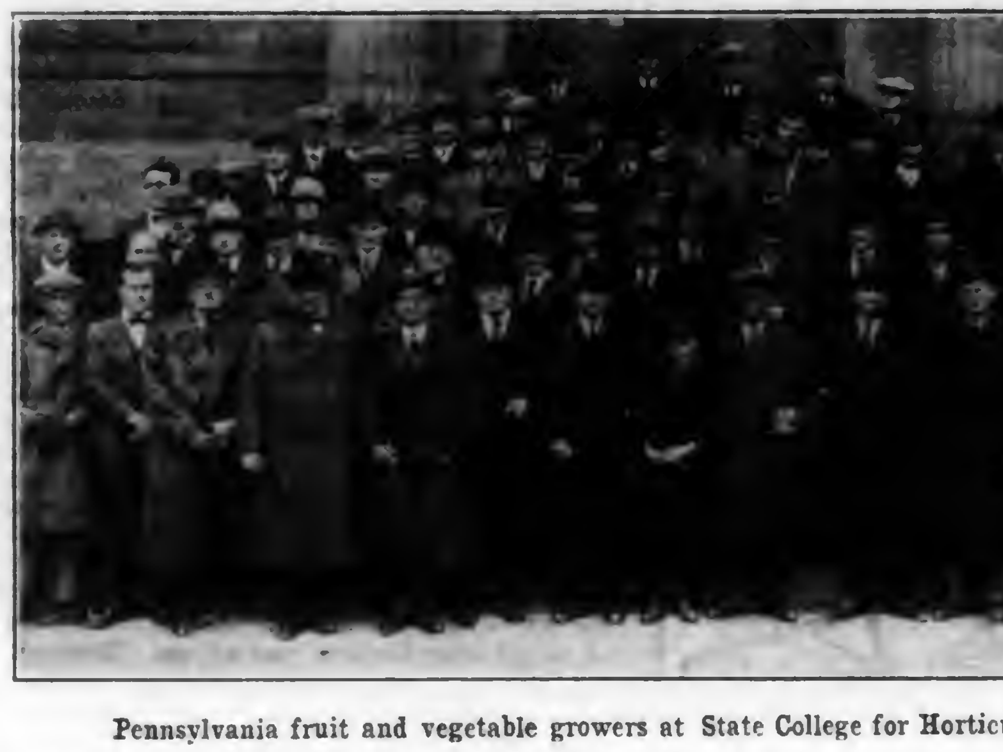
H. W. Thurston reported favorable results from dusting in the college apple orchard. The seven-year-old Stayman trees which were not sprayed or dusted at all, had ninety-three per cent scabby fruit this year; the trees receiving six applications of 80-10-10 dust showed less than one per cent scab, while the best sprayed block was six per cent scabby. The sprays and dusts were put on the same day.

The discussion brought out the fact that many growers had unsatisfactory results from dusting apples this year, particularly those living in the southern and southeastern counties. The results have been somewhat more favorable in the central and northern counties and at the higher altitudes.

F. H. Fassett, of Meshoppen, Wyoming County, continues to have success with dust, which he has used on apples for several years. He applies red engine oil emulsion as a dormant spray, and dusts thereafter. He attributes his comparative freedom from scab partly to the fact that this orchard has received annual cultivation with cover crops for thirty years and any diseased leaves, which are the source of scab infection, are turned beneath the soil in fitting the land.

H. W. Allison, of Shippensburg, Cumberland County, has secured at least ninety-five per cent control of apple scab with dust for several years and will discontinue spraying. On the other hand, J. E. Linde, of Lehigh County, H. F. Hershey, of Berks County, and several others, reported very unsatisfactory results from dusting apples. It is evident that the practice is still in the experimental stage, and that local conditions modify results to a marked degree.

In the college orchards dry lime-sulphur, altho more expensive, gave as good results in the control of scab as liquid lime-sulphur, and caused less russetting (eighteen per cent as compared with twenty-eight per cent). Even unsprayed trees, however, had five per cent or more of russetted fruit this year.



Pennsylvania fruit and vegetable growers at State College for Horticulture Week.

H. E. Hodgkiss does not favor the substitution of red engine oil emulsion for lime-sulphur as a dormant or delayed dormant spray on apples, for two reasons; first, because it has no value in the control of scab, as has lime-sulphur, and second, because it is not so effective for the rosy aphis, which is best controlled by adding nicotine to the delayed dormant spray. Moreover, the engine oil sprays are open to two other objections—they are likely to be variable in composition and to have a cumulative effect on the tree when used year after year, that may be injurious. However, Sidney Karr, of Hancock, Md., says that he uses an engine oil spray on peaches with good results and that it costs about one-third as much as lime-sulphur.

A "Cold-mix" Recommended

S. W. Frost, of Arendtsville, who has tried many commercial brands of miscible oils and home made emulsions, recommends the following "cold-mix," which requires no boiling: one and one-half pounds of a commercial brand of calcium caseinate, three gallons of red engine oil to 100 gallons of water. He finds that they can often be applied as late as the delayed dormant stage without injury. It is safer, however, to use them only when the tree is dormant, but never in winter or during freezing weather.

The necessity for applying at least one scab spray before the pink application was generally attested by the growers present. Whether this should be delayed dormant or a pre-pink spray is mainly a matter of convenience; in large orchards the two will merge anyhow.

New York's Spray Service Plan

The tendency is for fruit growers to get away from a definite spray schedule and to make applications at the time when local conditions are most favorable for control, regardless of the calendar.

This means that the leading fruit counties of Pennsylvania must come to the spray service plan which is now in successful operation in New York and several other states. A man is detailed from the state college of agriculture, usually a graduate assistant, to take charge of a field laboratory in the county during the growing season of about six months. In New York he is paid $50 a month by the college and the balance is raised among fruit growers by the county farm bureau.

He determines the time of emergence of insect pests in that county and the time of the dissemination of disease spores and so is able to give definite advice as to when to spray most effectively. This information is disseminated by telephone and mail to all the subscribing fruit growers. Most of the leading fruit counties in New York now have this spray service. It has paid large dividends to the growers.

According to the evidence presented at this meeting, if a fruit grower spends more than thirty per cent of his time during spraying, with the gun or nozzle not in operation, it is time for him to reorganize his water supply.

H. W. Allison, of Shippensburg, has been succesfull with alfalfa in his apple orchard. After it has been established two years he tills the alfalfa sod, setting the disc full so as to keep out the blue grass and gives a partial cultivation.

Keeping the Orchard Supplied

He gives about eight such cultivations before July 1, after which the alfalfa is allowed to grow and is cut at least once. He uses it to feed dairy cows, being careful to return the manure to the orchard, but it might be cut and left on the ground as a mulch. Handled in this way, his alfalfa sod stands eight or more years without reseeding and does not get grassy; it is one of the best ways of supplying organic matter and nitrogen to the orchard.

Sweet clover was reported by several growers as a desirable type of permanent legume sod, especially on poor hillsides, the chief objection to it being that it grows so high and reaches up into the tree branches. J. M. Bell, of Allegheny County, lets it go to seed once, and this keeps a good sod for several years thereafter. He cuts it two or three times a year, like alfalfa, there being enough of this crop of seed held over to secure a new stand each year. [to page 11]

Let This Spreader Prove Everything

Read These Points:

Having the beater mounted on the axle—exclusive construction—gives these great advantages to the John Deere:

—LOWER BOX; 6 to 10 inches lower than others; saves half the work of loading.

—HIGHER DRIVE WHEELS; 4 to 8 inches higher than others—easier for horses to pull load.

—MUCH SIMPLER; no clutches, no chains, no adjustments to make. Simplicity, together with rugged construction in every part, makes the John Deere the spreader of fewest repairs and longest life.

Let the John Deere prove that it soon pays for itself by spreading nearly nine times faster than the hand method, and by spreading the manure so that you get much greater returns from it.

Let the John Deere prove that it is easier to load, easier on the horses and does better work than any other spreader.

Ask for a demonstration. From every angle, compare the use of the John Deere with any other method or any other machine. Find out for yourself that the John Deere Spreader is the most profitable investment you can make.

Ask your John Deere dealer for a demonstration. Write us for free folder. Address John Deere, Moline, Illinois. Ask for Folder SH-436

OUR FARM

Where an Editor Works and Thinks

I NEVER expected to carry as good a watch as Santa Claus, collaborating with Wife and Son, surprised me with on Christmas morning. It excites almost as much pride as did the first watch I ever owned. The necessity for good timepieces increases with the increasing complexity of life, and the history of the development of means of correctly gauging the passage of time has kept pace with the history of mankind. It was not important to my Grandfather seventy-five years ago that he should know within a minute the correct time. As a farmer he got up before daylight anyway, and quit work when the sun went down. He could tell by the position of the sun when it was time to unhitch and go to dinner.

* * *

BUT the acquisition of my first watch was a milestone event. I was visiting one day at a neighbor's place where there were three boys. Their father was something of a watch tinker and trader and the boys just then possessed an old bull's-eye watch. I do not know how they came by it, but it was enough that they were willing to sell it. It was open-faced, so far as appearances were concerned, and one of the back case lids was missing, leaving the key hole exposed to the public. It had no second hand and the hour hand was missing. But it was a watch and it would go—even if it did take its own time about it. One of the boys went home with me to insure payment, as I did not have the money with me, nor any place else for that matter. I proudly showed it to Father, who did not himself have a watch, and asked him for the dollar. I remember that he had only eighty cents, but, seeing that I was so intent upon it, promised to furnish the remaining twenty cents as soon as he got it.

The next thing was to get another hand on the watch. I could not well ask Father to go farther into debt on my deal, but I got his permission to hire out to earn the money. One of the neighboring farmers was an expert workman in a good many lines, one of which was repairing clocks and watches. I went to him and got a job of picking potatoes the next day. I was on the spot early, taking the watch with me and leaving it with him to put the hand on. Another boy and I picked potatoes all day after three men diggers, and oh, what a long day it was! It ended when it got too dark to see potatoes and we ate supper by lamp light. After supper, the man handed me the watch adorned with two hands and the day's work was ended and squared at the same time.

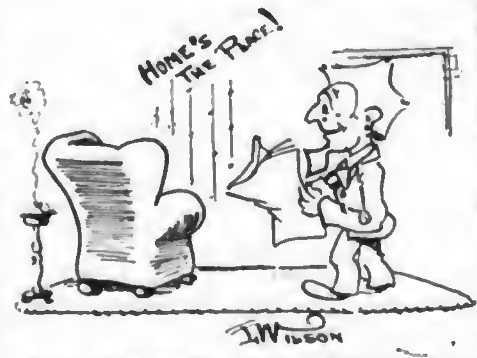
Probably if I had been older I might have questioned the justice of working hard ten hours in return for a two-cent watch hand, but at ten years of age the true value of anything is gauged by the happiness it brings, and, judging by that standard, I was fully paid. I have thought of that first venture into the business world a good many times since and well know that I have frequently done more work for a smaller return than I did on the day I labored for a watch hand. In fact, I have put weeks of hard work on a potato crop from which I received no more net profit than I got when the minute hand was put on that first bull's-eye watch.

* * *

A CHRISTMAS rememberance in the shape of a box of Golden Delicious apples from Paul C. Star, President of the American Pomological Society, again emphasizes the fine quality of that variety. Their size, appearance and flavor are attractive beyond description and should aid materially in increasing the use of apples as a dessert fruit. Of course, it will require time to show whether they are well adapted to all sections of the East, but they are being planted over a wide range of territory and in a very short time this question will be settled. There is little question but that eastern growers have neglected to plant varieties of quality to the extent they should have done, and that is one reason why western apples are so much in evidence in eastern markets. Commercial growers have had their eyes on quantity too exclusively. There would seem to be a good opening for quality apples produced in the East, providing the same care is taken in growing and marketing as is practiced in the West.—R. P. K.

THE CHEERFUL PLOWMAN

Home Sweet Home



I'VE been in town for seven days with nothing much to do, just loafing with the city strays a little spell or two. I'd been at home so blooming much, both evening, dawn, and day, that I was restless as the Dutch when dikes are giving way. "I think I'd like a little change," I told the folks at home, "I've been beside the kitchen range since Nero played at Rome!"

So I went down to Barnamsville and found a fine hotel, where I could lounge and eat my fill, where everything was swell; where bell-hops of a dozen breeds put out their paws for pelf, and colored waiters knew my needs before I did myself. "Oh, this is grand! How good it feels, without a tap to do, except," said I, "to eat my meals and loaf the daylight thru! I think I'll stay at least a year and Pete can run the farm, for life in these surroundings here is sweeter than a charm!"

Yes, it was wondrous for a bit, for three full days, I think, and then my spirits had a fit and heart began to sink! In two more days my head was wild, my mind was in a whirl, and I was homesick as a child, or little orphan girl! The seventh day I caught a train which got me home at noon, in time to save my sinking brain, but not a bit too soon!

I tell you what, the man who wrote of buckets in the well did better than the other goat who built the swell hotel!—J. Edw. Tufft.

New Catalogue is yours free!
Catalogue Number 102
Spring & Summer 1925
THE OLDEST MAIL ORDER HOUSE IS TODAY THE MOST PROGRESSIVE
MONTGOMERY WARD & CO.
CHICAGO

This Big Catalogue is Your Opportunity For Saving

YOU should have this valuable book in your home. You should know the right price to pay. You, too, can save money on everything you buy.

And what an opportunity for saving this book brings to you! In appearance it is a book. Actually, it is one of the largest general stores in the world brought right to your door. Thus you have before you the most complete assortment of goods and can select exactly what you want.

How the Lowest Prices are Made for You

Our goods are bought for spot cash. Cash always buys cheapest. They are bought in the largest quantities—taking even the whole output of a factory. Our buyers search the markets of the world for you. East, West, South, they go—to Europe, wherever there is a possibility of buying standard reliable merchandise, at lower than market prices.

Sixty million dollars' worth of merchandise has been bought for this book. Bought in quantities that compel low prices. Bought so that whatever you need, the merchandise is ready for immediate shipment to you.

"Ward Quality" Means Reliable Goods Only

But in our world wide search for bargains, we never lose sight of Quality. We do not believe you want "cheap" goods. We do believe you want good goods, sold cheaply.

At Ward's we never sacrifice quality to make a low price. We will not deal in "cheap" goods that are not worth the price you pay. We will not cut serviceability to make a lower price. Your satisfaction with everything you buy, we place first.

Everything for the Home, the Family and the Farm

The Woman's needs are nearly all supplied in this Catalogue. The most beautiful fashions for Spring and Summer, dresses, hats, coats, everything in wearing apparel in the best style for the school or college girl, the young woman or the matron, has been selected in New York by our fashion experts.

Every Man's wants are supplied. Almost everything a man or boy wears or uses around the home or farm, at prices that mean a big saving.

For the Home, there is every new thing, from household inventions to the newest patterns in rugs and curtains, the best designs in furniture. Everything that goes to make a home more delightful and more convenient is offered at a saving.

Your Orders are Shipped Within 24 Hours

When your order comes to Ward's it is appreciated. It is given careful attention immediately. Most of the orders are actually shipped within 24 hours.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Responsibility develops some men, and wilts others.

Insist on Certificates

IT IS time that farmers and dairymen should stop buying cows of unknown origin and state of health. In many localities it is customary for sales to be held by cow dealers who go here and there and buy cattle without regard to the question of whether they are tuberculosis-free or not, providing they are to be sold within the state in which they are bought. It is almost impossible to clean up a herd, a community, or a county unless the indiscriminate introduction of unknown cattle is stopped. Probably the quickest way to bring this about would be for farmers to refuse to attend sales of cattle except those for which certificates of soundness and health can be furnished.

A Suggested Resolution

IF ADVICE would prevent people from making foolish investments we would not have the annual loss experienced by farmers and others who put their money into wild-cat schemes on the promises made by irresponsible or dishonest salesmen who promise big returns. Surely, enough has been said and printed on the subject so that those who are intelligent enough to make and save money need not invest blindly and foolishly. The desire to realize big returns is always the motive which causes the investor to take the bait held out by those who make glittering promises. People who frown upon gambling, as such, will eagerly engage in the biggest gambling business in the world, that of risking their money on the promise of unusual dividends. Now is a good time to resolve that during the coming year we will not buy stocks, bonds, or shares in anything which is not rated by the reputable financial world as being first-class.

We have arranged to co-operate with one of the largest financial institutions in the investigation of questionable enterprises. This applies only to companies or persons offering stocks, bonds, etc., to the public. Whenever an offer or solicitation is received to invest money in an unknown enterprise, send all information and literature, including envelopes, telegrams, etc., to us, and we will have it investigated promptly. Safe concerns welcome such investigation. The spurious ones try to avoid it and urge immediate action. This alone is enough to condemn them.

The Pig Population

ABOUT a year ago we made the statement that it is usually wise to prepare for normal if not increased production when the market touches its lowest point. Hogs, which then were very low, were cited as an example. At the present time the outlook for hog raisers is very good for the coming year or two. A survey made by the Department of Agriculture indicates that the number of brood sows on hand this fall is about thirty per cent below the number which farrowed last fall. The amount of soft corn which had to be fed to realize on it and the high price of market corn is no doubt the reason for the close and rapid marketing of hogs. Farmers who watch the course and condition of the markets and adjust production accordingly, increasing at low points and reducing at high points, are the ones who maintain the most nearly uniform condition of prosperity.

Sunday Selling

THE number of replies to the questions raised in Pennsylvania Farmer as to the propriety of keeping roadside markets open on Sundays shows the great majority of the writers to be strongly opposed to the practice. We infer that most of them do not operate roadside stands, at least they make no mention of it. A few have written defending the practice. We shall publish at least a symposium of the replies in the near future. We must confess that we are somewhat disappointed at the absence of logical argument in most of the letters. Surely, there are convincing reasons which could be presented that would appeal to intelligent people, even tho they practiced Sunday roadside selling. The mere repetition of platitudes and traditional statements is not enough.

The Bug Causes Trouble

AS WE have said before, there is always something. Just when American potato growers were beginning to find a glimmer of hope in the potato shortage on the British Isles, His Majesty's government clamped down an embargo, forbidding the importation of potatoes from the United States. Why? Because we have potato bugs and England is afraid we might give them to her. That is given as the official reason, but it doesn't hold water. For in Canada the Colorado beetle is as common as it is here, and Canada is permitted to ship potatoes to England and Wales.

Are we being chastised because our grandfathers didn't like the way George III tried to run his colonies back in 1776? Or do Canadian potato bugs obligingly give up the ghost on the way across the North Atlantic so they will not be tempted to propagate their kind when they reach the land of Shakespeare?

Well, anyway, something is being done about it. A report from Washington says that "the American embassy at London has been instructed to make representations to the British government against the embargo which prohibits the importation of American potatoes into England and Wales on account of the potato bug."

Weed Pests

THE Pennsylvania State Botanist recently asked the farm bureau agents of the state to name the different weeds found in their respective counties, making a list of the most troublesome fifteen. Fifty different weeds were named and Canada thistle was mentioned in all the reports except one. The weeds most frequently mentioned were: Canada thistle, quack grass, wild carrot, wild mustard, plantain, chicory, ragweed, daisy, garlic, dock, morning glory, cockle, horse nettle, bindweed, and smart weed.

It is impossible to estimate the loss to farmers which weeds cause every year. Not only do they rob cultivated plants of moisture and plant food and reduce the yield by crowding, but they lower the grade and quality of some crops. Every farmer should have as a part of the program of farm work the elimination of weed pests. Such a plan would include: Care in selecting and sowing only the best weed-free seed, the thoro cultivation of hoed crops, and the cutting of all weeds before they ripen seed. If, where such weeds as garlic and Canada thistle abound, a rotation is adopted which will keep the ground thoroly tilled for several seasons it should be possible for every farmer to practically rid his farm of these robbers.

Postal Rates

THE fight now on in Congress over the proposal to increase greatly second class and parcel post rates is arousing interest in all parts of the country and among all classes of people. The proposal was made by the Post Office Department and by administration leaders in an effort to reduce the postal deficit and to obtain money for paying increased salaries to postal employes. To double the postage on newspapers will work a serious hardship upon thousands of small publications. But the proposal to increase the parcel post rates is still worse and less defensible. This service was obtained only after years of effort to overcome the opposition of the express companies and to cripple it now by greatly increasing the rates will affect rural communities seriously. There is room and need for economy in the postal system, and a good place to begin would be in the elimination of the franking privilege, but the postal service was never intended to be a money-making proposition and it is doubtful if it can be made self-supporting.

Teacher Tenure Laws

ONLY eleven states in the Union have teacher-tenure laws, New Jersey being the first to pass such a measure in 1910. There is no question but that the making of the profession of teaching a reasonably permanent one is necessary before any satisfactory progress can be made in public education. As long as teachers may be ordered to move on at the close of each or any term, regardless of their worth and ability, teaching will remain as more or less a tramp occupation. The business of teaching should be raised above the possibility of whimsical action and the influence of politics, favoritism and relationship. Opposition to reasonable teacher tenure laws is usually based on imaginary results. We understand a move is being made in Pennsylvania to bring such a bill before the coming session of the legislature. This should interest every lover of education and, if the bill proves to be a good one, should receive undivided support.

Tax Legislation

IT IS evident that strong effort will be made at the coming session of the legislature to reduce taxes on corporations in Pennsylvania. The State Chamber of Commerce is backing a move to remove the state tax on net profits, and the two-cent tax on gasoline. It is said to favor a tax on land for state purposes. Single Taxers may think this is a move in the right direction, but until that theory is applied in full (if it ever is) such a tax at this time would be unfair and dishonest. Years ago when the corporations of the state were seeking tax favors they proposed to pay the state tax if they should be relieved of the payment of local taxes. Now, they want to repudiate even that unfair arrangement.

Washington Letter

SUN'S INFLUENCE ON WEATHER.—More than two thousand scientists attended the recent annual meetings of the American Association for the Advancement of Science in Washington. The reports show that substantial progress is being made along the line of scientific discovery and development.

A notable advance in long distance weather forecasting was made during the past year. This is due to a better understanding of the correlation of the sun to weather on the earth, according to Dr. Abbot, in charge of the astrophysical department of the Smithsonian Institution.

The Smithsonian scientists have been studying for a long time the theory that by the sun radiation method accurate long distance weather forecasts could be made. They have been led to believe that there is a direct relation between solar radiation and weather, but the laws governing it are not yet sufficiently established to warrant definite conclusions.

TUBERCULOSIS DEVELOPMENTS.—The scientists report that two new methods of treating tuberculosis recently discovered give much encouragement to those who are studying ways of combatting this scourge. One is a vaccine discovered by Dr. Calmette of the Pasteur Institute. It is administered to children of diseased parents as a preventative. The other is a serum discovered by a Danish doctor who reports a high percentage of cures.

SUGAR FROM ARTICHOKES.—The sugar industry may be revolutionized by an investigation conducted by Dr. Frederick Bates at the Bureau of Standards, which has resulted in the production of sugar from Jerusalem artichokes. This sugar, which is known as levulose, is much sweeter than cane sugar, and it is claimed that it can be produced at a lower cost. The one difficulty in producing this sugar in a commercial form is its propensity to gather and absorb moisture. If this disadvantage can be overcome, it is believed that levulose sugar can be put on the market in competition with other forms of sugar.

The raw material from which it is extracted can be produced very cheaply, as anyone knows who has ever had any experience with a patch of Jerusalem artichokes. The artichokes yield enormously and when once planted are difficult to eradicate. And they thrive profusely where anything else will grow.

MUSCLE SHOALS TANGLE.—Congress went back to work after its Christmas recess on December 29. The Senate is apparently no nearer the solution of the Muscle Shoals tangle than when it began. While the advocates of government operation are vociferously proclaiming that the Underwood bill is purely a super-power proposition with no guarantee of fertilizer production, the National Fertilizer Association is as vigorously assailing the bill on the grounds that it threatens demoralization of the fertilizer industry.

The National Fertilizer Association evidently regards the Norris government operation bill as least objectionable to the fertilizer industry. The Norris bill allocates 25,000 horse power for experimental work in air nitrate production, whereas the Underwood bill provides for the production of 40,000 tons of fixed nitrogen annually.

GERMANY SELLS US AIR NITRATES.—R. C. Bower, of the American Farm Bureau Federation, declares that action on the disposal of Muscle Shoals now is very important; that no attempt by private parties to manufacture air nitrates in this country will be undertaken until the Muscle Shoals proposition is settled one way or the other. That the business may be reasonably profitable is indicated by the fact that at this time German producers are exporting air nitrates to this country, paying a duty of $5 per ton.—E. E. Reynolds.

Harrisburg Letter

HISTORY MAY REPEAT.—Legislation affecting Pennsylvania's agricultural and allied interests, already more or less involved in differences over the manner in which budgetry estimates have been slashed, may be complicated by the contest over the speakership of the lower branch of the general assembly. It is only necessary to go back to the session of 1917 to find how ambitious plans for expansion of activities of the state government relating to husbandry were trimmed because of a fight at the start of the session over who should preside in the House. It may be that members from agricultural counties will follow the example of those from the anthracite region and for a group to secure what is considered essential regardless of economy contentions and political exigencies. Considerable sentiment of this character has been manifested here by early birds among legislators who have knowledge of the vital necessity of proper provision for carrying on work in an efficient manner.

WEATHER HITS WHEAT.—Lack of snow in wheat growing counties has operated unfavorably on the grain according to scattering reports coming to Harrisburg. Wheat got off to a bad start because of weather and when the coldest temperature arrived there was no snow. Figures of all counties show a gain of 25,000 acres over last season, but the condition is disappointing in many localities.

TURNING TO EGGS.—People interested in the poultry exhibit planned for the State Farm Products Show have turned from that line owing to the fowl plague quarantine to making the egg display something notable. It is estimated 1400 dozens, or double the display of the last show, will be spread upon the tables. About a thousand square feet of space has been provided in the way of table tops.

THE POTATO YIELD.—The production of Pennsylvania potatoes is officially announced as 28,792,000 bushels in 1924, a gain of over 2,500,000 bushels. The Department of Agriculture says "The quality of the potatoes appears to be above the general average." A fourth of the crop was sold in the big producing centers by November 1. Only eight per cent were unfit for food or seeding. This is one of the most satisfactory reports made in a long time.

MORE COUNTIES REPORT.—Complete figures on the farm census have come from Adams and Snyder Counties, making four counties finished. The information furnished has provided valuable material for studies, it is said at the Capitol.

ROAD PLANS GROW.—Counting in the contracts carried over from 1924 the work of the State Highway Department this year will reach what is expected to be the most active point ever known by the middle of summer. There has been an expansion of plans for new construction due to assurances of prompt legislative action in event it is needed to make bond money available.

BUREAU MEN DROPPED.—Considerable surprise was manifested about the State Capitol when resignations were asked of men in bureaus of the Department of Agriculture when the speakership war began to get hot. It was contended at the Capitol the force was down to a basis of actual need and that undesirables had been weeded out.—Hamilton, Harrisburg.

New Jersey Letter

POTATO TRIAL AT FREEHOLD.—The mock trial of the Jersey potato which has created such a furore in central New Jersey potato districts this fall, again found the New Jersey "spud" not guilty. A large and enthusiastic attendance of potato farmers from Freehold and vicinity attended the trial at which practically the same cast as at previous mock trials presented the case of the New Jersey potato. This method of focusing farm public attention upon improvement in growing and marketing New Jersey's famous potato crop, has proven successful, and plans of leading potato growers for 1925 indicate that the lesson of the trials has taken root.

ROAD AID REQUESTED.—The State Hotel Association recently announced its intention to back a bill at the coming session of the New Jersey State Legislature providing for improvement of the road from Adelphia to Lakewood. This stretch of highway, together with road improvement already authorized for that vicinity, will couple up the hard surfaced road from the northern part of the state to Lakewood and South Jersey resorts. This improvement is in line with similar requests from various New Jersey sections to build up as rapidly as possible statewide highways of the latest surface types.

EGG PRODUCTION LOWER.—Poultrymen in eastern and southern New Jersey report that pullets and hens alike, are not laying as well as usual for this season of the year. Irregular weather conditions are cited as a cause by some of the poultrymen. A recent survey of the poultry situation in the southeastern counties indicates that proper feeding rations and general methods in the care of the flocks have been fully up to standard, indicating other causes for lower egg production than improper methods in care of the flocks.

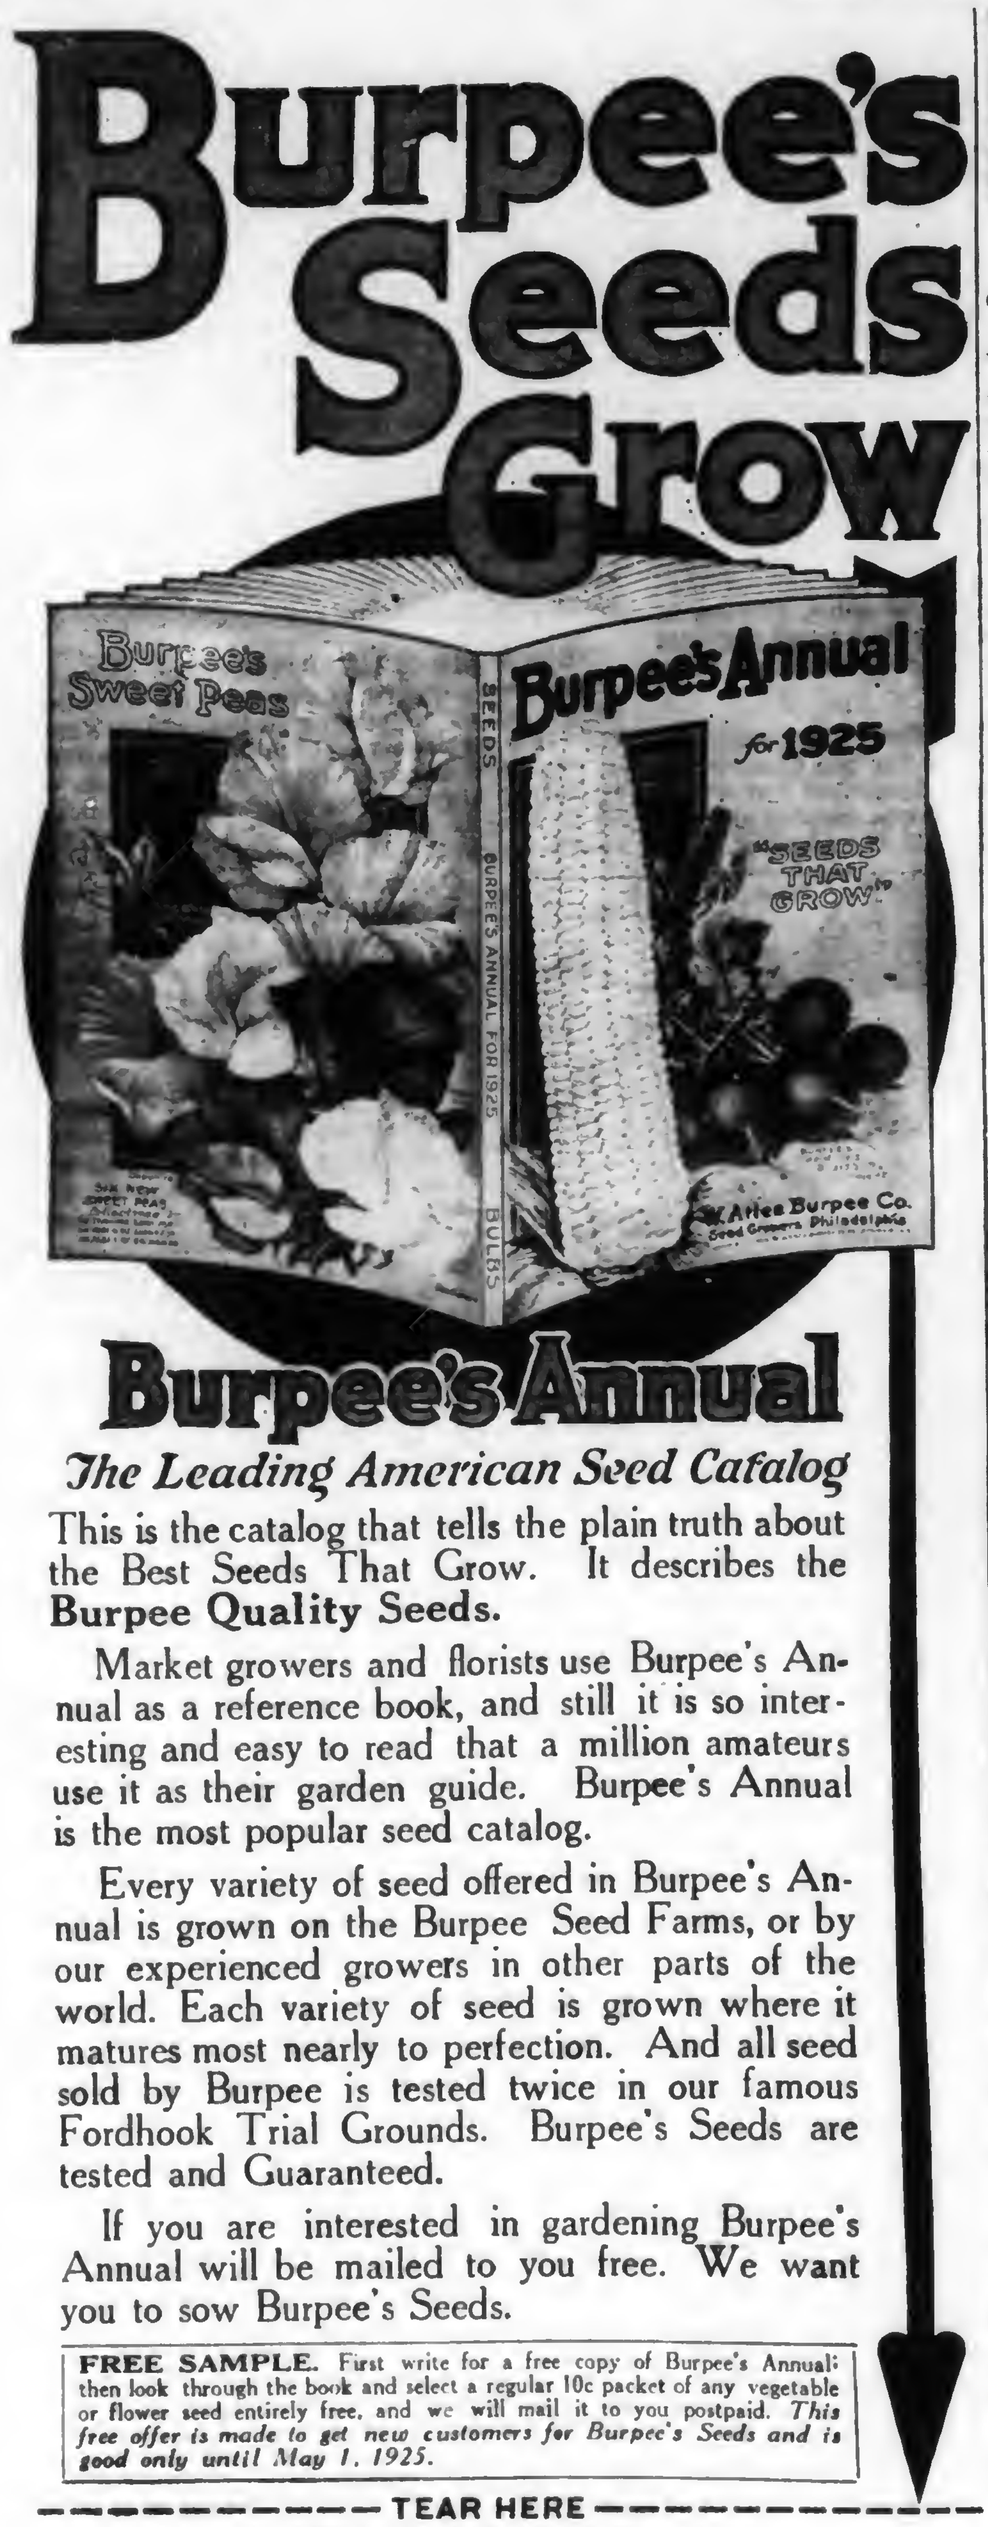
EMERGENCY DOORS IN JITNEYS.—The New Jersey Public Utility Commission recently ruled that all jitneys operating in the state under jurisdiction of the Commission, must be equipped with an emergency door. The ruling comes as a result of several serious accidents lately where the lack of proper exits from jitneys caused loss of life. The ruling affects some 835 buses, or substantially half of those in operation in New Jersey. The vehicles under municipal control are not affected. The ruling is regarded by farmers as important in view of the large number of inter-urban bus lines now used by school children and the rural population. The State Commission has allowed ninety days for buses to provide the emergency exits; a large percentage of the jitneys are already equipped.—B.

New York Letter

DAIRY MATTERS.—The November pool milk prices for cash distribution to members was $2.16 per hundred, expenses amounting to nine cents per hundred. With the exception of October and November, 1923, this is the highest price since February, 1923, and $1.08 higher than the average price paid for milk made into butter. The Dairymen's League marketed seventy-three per cent of all the milk it handled as fluid milk during the month, a new high record. Since April the League has received 3818 new members, making a total of 67,564 members on file—a better showing of live members than ever in its history.

The recent purchase of six Clover Farm plants and sixty-eight bottled milk routes automatically adds $600 a day to the League income on one of these plants only, as it means a big increase in fluid milk trade. Since then sixteen plants have been purchased of the Evans Dairy Company, meaning further increases to the best class trades.

The League was able to pay cash for both these purchases, an unusual proof of sound business policy in a co-operative organization so young and so huge.—M. G. F.



Burpee's Annual

The Leading American Seed Catalog

This is the catalog that tells the plain truth about the Best Seeds That Grow. It describes the **Burpee Quality Seeds.**

Market growers and florists use Burpee's Annual as a reference book, and still it is so interesting and easy to read that a million amateurs use it as their garden guide. Burpee's Annual is the most popular seed catalog.

Every variety of seed offered in Burpee's Annual is grown on the Burpee Seed Farms, or by our experienced growers in other parts of the world. Each variety of seed is grown where it matures most nearly to perfection. And all seed sold by Burpee is tested twice in our famous Fordhook Trial Grounds. Burpee's Seeds are tested and Guaranteed.

If you are interested in gardening Burpee's Annual will be mailed to you free. We want you to sow Burpee's Seeds.

FREE SAMPLE. First write for a free copy of Burpee's Annual; then look through the book and select a regular 10c packet of any vegetable or flower seed entirely free, and we will mail it to you postpaid. *This free offer is made to get new customers for Burpee's Seeds and is good only until May 1, 1925.*

Manager Pomona Gardens, Newark, Delaware

Co-operative Tomato Canning Gains Favor

THE following extracts from the annual report of County Agent Wilson of Kent County, Delaware, call attention to a type of co-operation that is gaining favor in Delaware and that promises value in other localities where relations between growers and canners have not always been too friendly.

"The co-operative tomato canning program is now gaining popularity thruout the county as both the canners and growers are realizing that some plan of co-operative management is the only satisfactory method by which the crop may be harvested and packed.

"Under this form of contract the owner of the factory agrees to furnish the fuel, light, local telephone service, to keep the building and machinery in first-class condition and to superintend personally the canning operations. In return the growers agree to furnish all cans, to bear all the expense of raising the tomatoes and to assume full charge of the selling of the product.

"This method of canning calls for a payment upon the part of the farmer of twelve or thirteen per cent, depending upon local conditions, of the gross sales of the canned goods as rental of the factory. In addition to developing a better market for the tomatoes, these factories have been instrumental in encouraging the growers in the use of higher grades of fertilizer and good seed that are suitable for each locality.

Five Plants in the County

"During the 1923 season there were four co-operative canning factories in Kent County, comprising the areas around Dover, Clayton, Kenton, and Wyoming. This year a similar factory was operated at Frederica, making a total of five co-operative plants in the county. As this movement spreads over the tomato producing sections other factories will be organized under this plan. The time is not far distant when every tomato grower in Kent County will become associated with one of these co-operative canneries."

Whether or not this form of co-operation has all the germs of success and none of those of failure only time will tell. It recognizes one important fact, however, that co-operative organizations of farmers have not always recognized, and that is the necessity of having skilled supervision of the factory operation. Most of us think we could do the other fellow's job as well as he, and that ours has all the difficulties.

Skilled Supervision Important

When farmers have tried to go into the manufacturing business, whether in canning or any thing else, they have usually found that manufacturing requires technical skill, not more of it than farming, but a different kind. In these Kent County factories the farmers seem to take no responsibility for the factory operation, nor do they even take the risk of buying or building a factory. As their profits are proportional to the amount of support they give the enterprise, however, they get all the benefits of co-operation with less than usual of the risks. It looks like a plan worth following in other tomato canning sections.

Now Belongs to the Farmers

Our local factory is called a co-operative factory, and is such to the extent that farmers own much of the stock and feel a special interest in the success of the business. Until the present year, however, the growers did not really control the business because city interests owned a little more than half the stock. That arrangement proved very unsatisfactory, being little better than out-and-out city ownership. This year growers have had a larger share in the management of the business, and altho profits cannot be large, because of the very unfavorable season, the farmers are better satisfied and seem willing to try another year to make more money.—W. C. P.

A Busy Spot at All Hours

Central Market, Erie, Pa., serves as a wholesale and a retail market, at different hours. It has a good location; is central with respect to the city, adjoins two trunk lines, has a wide street in front, and trolley line.

Skull and Crossbones!

THERE are no fools on vegetable farms, of course. If any should accidentally get mixed up with the business when spraying and dusting season arrives, there are a couple of useful practices that will help prevent trouble. Of these the first is advertising in the form of warnings and directions in large type, so that careless or inexperienced help may not get themselves and the crops into difficulties.

A big skull and crossbones, painted in the crudest way on the poison keg and the potato disinfecting barrel provide a plain warning that is intelligible to every one, whether he can read or not.

Pails and measures used for arsenate of lead and other poisons need conspicuous marks to show that they must not be used to slop the hogs or water the calves.

"Put Me Back Again"

On the top of the drum of tobacco dust write in big letters, or paint with red paint, "Put me back again." This can go on the under side of the lid as well as the upper side.

If the boy likes to dabble in paint, as most boys do, let him practice on skulls and crossbones, good big ones, and put these in useful places rather than a cross neighbor's front door.

It seems to me more easy to make mistakes in measuring out the ingredients for mixtures than in any other of the operations connected with spraying and dusting. Measures that hold just the right amounts of poisons or tobacco extracts for a tankful of spray save time and trouble and prevent error. If present measures are too big, get new ones or fix the old ones so they cannot be overfilled.

They Don't Read Directions

In big letters, red or blue or yellow, make a sign showing how much of each thing to use for each tank of spray. The information is all on the barrel or package, but no one reads the directions except the boss, and often the directions become smeared over so they cannot be read. The average help learn only from the boss. They easily forget. Remind them with big signs.—W. C. P.

Centralized Plant Beds

IF TOMATO canning were not a business of long standing in Delaware and thruout Maryland and New Jersey, a year like 1924 might slow it up greatly. The crop was generally small and late. A serious disease developed in young plants in the seedbed last spring, and this led to a shortage of good plants.

The occurrence of this disease, which could not be controlled by spraying, hurt the popularity of the centralized plant beds in Delaware, which were just beginning to enlist the active interest of growers and canners alike.

The biggest advantages of centralized plant growing are the improved opportunity to control leaf spot, and the use of most promising varieties and strains of seed.

It's a Question with Them

Since spraying did not control the stem rot in 1924, growers are wondering whether to depend for their plants on the large plant growers or to return to the older plan of growing plants themselves. If they distinguish between the old and well known leaf spot disease and the stem rot which hurt the plants in 1924, they will know that the centralized plant beds have the same chances of success in 1925 that they have had in past years, and that there are the same arguments favoring this plan of growing plants.

Specialized plant growing is on the increase because it is based on sound principles, and the coming year is likely to see a still greater increase, in spite of the bad luck from stem rot in 1924.—W. C. P.

A NEW COACH

Recognizing the demand for a truly comfortable and economical car of the coach type, Dodge Brothers have provided it.

The new Coach reveals a characteristic maturity of design—in the low-swung lines of the body, in the arrangement of the interior for five-passenger comfort, and in the exceptional dimensions of the doors and windows.

The car is lacquer finished in Dodge Brothers blue with a body stripe of cartouche yellow. Fittings and fixtures are first quality throughout, and balloon tires are standard equipment.

So far as riding comfort and dependability are concerned, it is only necessary to add that the Coach is built on Dodge Brothers sturdy chassis and cushioned by Dodge Brothers underslung springs.

The price is $1095 f. o. b. Detroit

Positive Proof That

Niagara

DUSTS and DUSTERS

offer the simplest—most economical and most effective method of protecting your fruit and crops from the ravages of insects and disease.

This is a strong claim and unless backed up with positive proof one that is absolutely worthless.

Here are eleven statements by disinterested authorities taken from hundreds in our files. We will furnish statements from growers and stations in any section on request.

APPLES

"This entire orchard goes on a dust schedule next year, dormant and all. The twenty-two hundred old trees which we dormant dusted last year have shown up so well that I think I am warranted in taking this step.

"As far as the summer dusts were concerned as you know we got them on in good shape and the results certainly show it."

H. A. Burguer,
Chambersburg, Pa.

"This last year we obtained most excellent results on Leaf Roller, Codling Moth and Scab."

Eli Garretson,
Biglerville, Pa.

"In view of the scarcity of labor, the time saved is so great that we would not attempt to care for a large acreage without dusting equipment."

Frederick F. Greist,
Biglerville, Pa.

"We used your dusting method on McIntosh, Delicions and Northern Spies. We were able to control all insects and Scab with a great saving of time."

Pecks Orchard,
Frank A. Kaiser, Scranton, Pa.

POTATOES

"After running dusting tests for three years to solve my own problems, I am convinced the dusting method applied to potatoes is both practical and profitable for the man who grows them. This year dust produced a crop of over 134 bushels per acre on my Hyruco potatoes."

W. W. Gibbel,
Brunnerville, Pa.

"Am well pleased with the duster for potatoes. From a time and labor standpoint I feel as though I would not have been able to care for my crop without it. Am convinced it gives protection against bugs and blight."

C. J. Heistand,
Bainbridge, Pa.

"Late application of your potato dust certainly did increase my crop."

H. L. Keaner,
Lititz, Pa.

"Dusting potatoes is much easier than spraying and the results just as good."

John Hess, Lititz, Pa.

"Dusting goes much faster and is much easier on horses. We ran a comparison with the aid of a County Agent with the following results: Untreated 214 bushels per acre; liquid sprayed 231 bushels per acre; Niagara dusted 286 bushels per acre."

Gottlieb Heffelfinger,
Myerstown, Pa.

GRAPES

"I used your dust and machine last year on my whole vineyard of 24 acres and I'm using dust exclusively this year."

Gordon H. Miller,
Northeast, Pa.

"I used one of your Niagara Dusters on my entire vineyard of 20 acres and got very satisfactory results. Can dust in a quarter the time it takes to liquid spray."

Chas. F. Buchholz, Northeast, Pa.

But the strongest proof of all is the fact that every year, for nine years, more growers have adopted the Niagara Method of Protection until today the demand for Niagara products requires the capacity output of the largest plant of its kind in the world.

Every grower will find it to his advantage to investigate the Niagara Method thoroughly and find out how to save money, time and crops by getting the right Niagara for his farm. Talk with your dealer or write us, and find out just what model Duster and what Dusts are best to use on Apples, Peaches, Pears, Potatoes, Hops, Grapes, Strawberries, Celery, Small Fruits, Vegetables, etc. Our specialists are at your service.

Fruit Growers Seek Protection Against Deer

THE following resolutions were adopted by the fruit growers assembled at State College during Horticulture Week, December 8 to 13:

"This gathering of the fruit growers of Pennsylvania, representing eighteen of the more important fruit counties, submits the following statement concerning depredations to orchards by deer.

"We congratulate the State Board of Game Commissioners on its success in multiplying and protecting the game resources of the state. Fruit growers, as well as city sportsmen, are the beneficiaries of this development and favor a continuance of this policy, under proper safeguards. But when deer are permitted to multiply to the point where they become a menace to farms and orchards, restrictive measures are necessary.

Cause Immense Loss to Orchards

"Deer are now causing the fruit growers of Pennsylvania a loss of hundreds of thousands of dollars annually, and the loss is increasing every year. The deer browse the lower limbs of bearing trees, and thus materially reduce the crop, but the greatest damage is to young trees. In some parts of the state it is practically impossible to bring a young orchard, or re-sets in an old orchard, into bearing. It is a real problem, and a very serious one to many growers, and calls for immediate solution.

Four Recommendations

"We submit, therefore,

"First: That the deer are the property of the state, because protected by the state, hence the state is responsible for any damage that they do to private property and should either prevent this damage or pay for it.

"Second: That the most expedient method of reducing the damage is for the Board of Game Commissioners to declare an open season on doe in those districts where they are so numerous as to be a menace to farms and orchards.

"Third: That fencing the orchards or farms may be feasible in a limited number of cases, but the cost of the fencing should be borne entirely by the state, not half by the state and half by the fruit grower, as at present. The grower should not be asked to pay for fencing out the state's livestock.

"Fourth: That money payment by the state for damages caused by deer, altho clearly justified in equity, be deferred for the present pending the results of the foregoing methods of attempting to protect the orchards."

Eastern Apples Win

AT THE annual apple show held November 17-22 at the University of California, George H. Lincoln, of Lackawanna County, Pennsylvania, won the largest number of blue ribbons of any one exhibitor, viz., seven out of eight entries.

First prizes were awarded to his McIntosh, Baldwin, Opalescent, Winter Banana, Wagener, Smokehouse, and Wealthy, and third to his Delicious. It is remarkable that this variety, grown in northeast Pennsylvania, should win third place on the Pacific Coast where such wonderful ones are grown. California had thirty entries, as well as eight other states, on the Delicious. Mr. Lincoln has won the blue ribbon on McIntosh two years in succession.

Liverpool Sells Apples

THE growing importance of Liverpool as an apple distributing center is stressed in a recent report received from Edwin Smith, fruit marketing specialist of the United States Department of Agriculture, who is making a study of English and other European markets with a view to further development of the export trade of this country.

In 1921, according to Mr. Smith, only light quantities of fruit of any kind and practically no apples were being handled thru Liverpool, whereas at the present time Liverpool is a point for apple distribution of the first magnitude and, according to the Canadian Fruit Trade Commissioner, is the main center of apple distribution in Great Britain.

"The erection a few years ago of a fruit office building and modern sales room by one of the large factors in Liverpool has undoubtedly had a great deal to do with the development of the trade there." Mr. Smith says. "All apples are handled thru this sales room.

Exhibiting the Samples

"The method of showing the samples of apples to be sold at auction differs radically from that employed in this country and contains a touch of the dramatic. Prior to the sale the samples are brought to the basement, which is below the sales room, and the tops of the barrels removed. They are brought from the basement to the sales room upon a double alternating lift. For large lots two samples are shown, for small lots only one, each sample consisting of two barrels. One of the barrels is brought to the sales room and an attendant sways it to and fro under a huge flood light so that the pack can be seen.

"Meanwhile attendants fling the second barrel up on the edge of the wall to the lift with a whirl and flourish and cataract its entire contents out and down into a huge basket, much as a soda clerk would throw a milk shake from cup to glass. The basket which is very broad and shallow, is then raised on the lift and placed under the flood light for examination by the buyers. The sale having been completed the empty barrel is jammed down upon the basket of fruit and taken below into the basement as the attention of the buyers is drawn into the next 'inside-out' exhibition.

"Boxed apples are not treated quite so drastically nor so dramatically. A couple of boxes are placed on display with lids removed and the wraps pulled from perhaps half of the top layer. Fruit that has been opened, is placed on one side of the basement and sold to a regular trade of peddlers who purchase it at prices ruling a few shillings per barrel less than the price paid for unbroken packages."

Keystone Fruit Growers

(Continued from page 3)

Certain growers who have not been able, because of the acidity of their orchard soil, to secure a good stand of leguminous cover crop, were advised to use buckwheat, oats or sorghum in late summer, to disc this in lightly in the fall, and seed rye, thus securing the maximum amount of organic matter without the expense of liming.

Too Many Varieties

R. W. Rees, of New York, urged Pennsylvania growers to limit rigidly the number of varieties. It has been the experience of western New York co-operative packing associations that they lose money on odd varieties. Fully eighty-five per cent of their output is of four varieties—Baldwin, Greening, McIntosh and Spy. The associations are insisting that members shall handle other varieties personally, not thru the organization.

The twenty-five apple growers in a co-operative association at Littleton, Massachusetts, limited the varieties that they would handle to Wealthy, Gravenstein, McIntosh and Baldwin. Probably a wider range of varieties is justified in Pennsylvania but the fruit growers present agreed that much money is lost on poor varieties, which should be culled from the orchard.

Federal Grades Have Helped

Mr. Rees called attention to the confusion and indifferent success attending the use of state grading laws in various states until the promulgation of federal grades, two years ago. These have been working out well, both in New York and in this state.

Federal inspection of carlots at shipping point is replacing association inspection among the western New York growers. There is no reason why standard grades and federal inspection should not be equally useful to growers supplying local markets by the truckload.

He is of the opinion that the two apple by-products that are most promising are pasteurized cider and canned apples. Cider treated with a preservative, such as benzoate of soda, is not relished because its lacks character, but recent improvements in methods of pasteurizing have made possible a cider that is sweet, but has snap. The canned apple market is expanding but the larger sizes are preferred, because it takes as long to pare a two and one-quarter-inch apple as a three-inch apple.

Pollination Problems

The Stayman apple, hailed in many quarters as the queen of varieties for Pennsylvania, has disappointed many of its friends during the past three years, and there is a feeling that possibly it has been over-planted. It has been a sly bearer in some counties, partly because of frost and partly because of poor pollination.

Several growers reported marked instances of the failure of Stayman to set fruit well unless inter-planted with other varieties blossoming at the same time to supply pollen, and with plenty of bees in the orchard to carry the pollen. Old Winesap and Black Twig are not good pollenizers for this variety: Grimes, Delicious and Baldwin are satisfactory.

The J. H. Hale peach, also reported a sly bearer, is benefited by being inter-planted (alternate blocks of three to six rows) with Elberta.

(To be continued)

"When is your daughter thinking of getting married?"

"Constantly."—American Legion Weekly.

A Twenty-Five-Year Record of Highest Quality

FOR a quarter of a century the New Idea Spreader has done a steady job of profit-making on thousands of farms. Its day in and day out service, year after year, has won for the New Idea unquestioned leadership—and made it known in every farm community as *the world's best Spreader!*

The NEW IDEA SPREADER

The New Idea Model 8 Is the Perfect Spreader!

Never before has greater value been built into a farm implement! Never before has a farm dollar bought greater quality! The new Model 8 New Idea gives you a spreader built for a lifetime of honest service. Its design and details of construction have been improved and refined by twenty-five years of development—and today the efficient *New Idea* stands as the world's foremost speader.

Special Features that Add Extra Value to the New Idea!

Every single, desirable feature for efficient spreading is built into this sturdy, new model New Idea. *Built low* for easy loading—*Front and rear wheels track*—*Auto steer or pivot axles*—Can be driven into barn or shed for loading—*Unit steel riveted frame* reduces weight and increases strength—*Strong, simple feeding and distributing mechanism* insures perfect shredding and wide, even spreading.

Insist on Getting the Original and Genuine NEW IDEA SPREADER

The New Idea has patents on its exclusive features and you can find no other spreader with the same definite advantages built into it. To get these advantages insist on *the original and genuine New Idea Spreader.*

Complete literature on the New Idea Spreader or New Idea Transplanter will be sent you upon request. The coupon will bring you the facts—or ask your dealer to show you these two fine farm implements.

The New Idea Spreader Company, Coldwater, Ohio "Spreader Specialists for Twenty-five Years"

The New Idea Transplanter

Here is another big achievement of the New Idea organization—a new and better transplanter that takes the guess-work out of plant-setting. The New Idea is the first and only transplanter with the driver's seat *behind the plantsetters.* All the work is under the direct control of the driver. *He engineers the job.* He watches the plant-setters in front of him—sees that every plant is set and covered right—and given the correct amount of water. A better-built machine that insures better planting, and a far greater yield. Handles any transplanting job.

Make 1925 your biggest egg year through scientific feeding

Only five dozen eggs a year is about the annual yield of the average hen, according to government reports. Your own flock will easily produce ten or twelve dozen eggs per hen, and even more, through proper feeding alone.

Thousands of poultry keepers and farmers throughout the country today are reaping the practical results of Ful-O-Pep Feeds in greatly increased cash returns.

This user of Ful-O-Pep Egg Mash gains a clear profit of $2.40 per hen!

"I have fed your FUL-O-PEP Chicken Feeds exclusively for five years to my flock, and would like to tell you of the excellent results I have had. From our records this year from 104 laying hens, we received 1794 eggs during January, and 1699 eggs during February and realized a clear profit of $89.92 and $59.57 respectively during these months. We included every item of expense, feed, straw, and new boxes for eggs taken out for hatching in February, and all similar incidentals. Our records show that during 1923 each laying hen realized a clear profit of $2.40. I would certainly advise everyone who wants the best results from his poultry to feed FUL-O-PEP Feeds exclusively."

Max A. Marschner, Willow Grove, Pa.

Develop your flock with the famous Ful-O-Pep Poultry Feeds

Without question one of the most definite aids in increasing profits from poultry is the Quaker Oats Company's complete line of Ful-O-Pep Poultry Feeds—providing the best, most scientific and most thoroughly tested feed for every age and stage of poultry development.

Some good dealer near you sells the Ful-O-Pep line of feeds. See him. Talk it over with him. He can supply your needs.

When Pullets Lay

I followed your advice sometime ago in feeding my chickens and after ten weeks they are just starting to lay eggs now. The pullets have not started to lay yet, the oldest pullets are about eight months old. They are Plymouth Rocks and White Wyandottes. Does a county agent come free of charge to look over your flock or what are his charges? I would like to have someone who knows how, look my chickens over and tell me which I should keep for next year's breeding. I am going to mark those chickens that have started to lay now. They laid steady the whole season thru when they once started.—L. E. C., Westmoreland County, Pa.

Plymouth Rock and Wyandotte pullets do not usually lay many eggs before reaching eight months of age. They can be forced to lay sooner but poultrymen generally find that hastening the maturity of the heavy breeds tends to Leghornize them and result in the production of small sized eggs.

The county agent is a public servant and makes no charge for his service to the individual. Your plan of marking the heavy winter layers will help you to mate up one or more good breeding pens to produce some fine chicks next spring.—R. G. Kirby.

Special Breeding Pens

ONE of the easiest ways of improving the quality of a farm flock is to use one special breeding pen each year to produce hatching eggs. During the winter watch the hens that are laying. With any of the heavy breeds it is usually possible to pick a layer from the nest and slip a colored band over one leg. The bird can then be replaced on the same nest as quietly as possible.

Early in the spring the farm flock owner knows from the bands the birds which were early winter layers. They are the hens of good vitality which seemed to molt quickly and produce eggs while winter prices still prevailed. Among the twenty or thirty banded birds there may appear about ten birds with the brightest intelligent heads and plenty of vigor. They should be birds of good type for the breed so they will produce cockerels good enough to sell as breeders.

Two Classes of Eggs

Mate this one pen with the best cockerel you have produced or the best one you can buy. The remainder of the flock will doubtless be good enough to produce some hatching eggs but the eggs that are used at home and sold for eating can always come from that part of the flock.

The eggs from the special mating will all be classed as hatching eggs and can be saved to place under hens or in an incubator. None of the eggs from these quality birds will be sold by the dozen while eggs from inferior birds are saved for hatching.

Often the heavy winter layers will become broody early in the spring when all of the flock are laying. Sometimes the eggs from the entire flock are selected from the day's gathering and placed under these heavy laying hens for incubation. It does not result in the greatest improvement in the flock.

Frequently no special mating is used because there is only one poultry house. One colony house can be used for a mating of ten hens and a cockerel. Most of the early hatching will be done before the birds have daily use of the range so they would not have their freedom even if they were all together.

Sometimes a division in the poultry house can be made with a few two by fours and some poultry netting. Then the special mating can be housed at one end. They can be given their freedom on certain days while the bulk of the flock are confined.

It is not necessary to keep this special mating together for a long period if you need only a few settings of eggs for the reproduction of a small farm flock. As soon as that number have been gathered for incubation the mating can be broken up simply by turning the birds out with the free range flock.

When There's No Colony House

When a colony house is lacking it is sometimes possible to place a small mating in an open shed or the corner of some farm building. If you have really good birds you have a few outstanding individuals capable of producing hatching eggs worth at least ten or fifteen dollars per hundred.

Suppose you need about 300 hatching eggs from quality stock. Sometimes you can save about thirty dollars by mating up that special pen. It is just a case of selling the market eggs at market prices but keeping the cream of the production for increasing the flock. This is better than marketing quality eggs from the farm flock at twenty-five or thirty cents per dozen when they are so much more valuable for improving the winter egg production of the flock.—R. G. Kirby.

Dubbing Male Birds

RECENTLY some poultrymen in cold climates have tried dubbing male birds or removing the comb and wattles the same as they do with fighting game cocks. I think there are times when this is justified altho at first thought it seems like a cruel practice.

For example, you might have a fine White Leghorn cockerel with a large comb which has been badly frozen. If left for nature to heal the wound the bird must carry the sore comb for weeks until the frozen parts slough away and healing results. This must be very painful. It reduces the vitality of the bird and thus injures its breeding powers. Possibly one cause for a lack of fertility in the early hatching eggs may be the impaired vigor of male birds with badly frozen combs.

Wound Soon Heals

In such cases the comb can be removed with large sharp shears like tinsmith's shears. The wound will bleed but soon heals over. Instead of a mass of decaying tissue the bird has a clean cut wound of healthy tissue which soon heals over. Some breeders who have dubbed males report that the birds will eat and drink in a normal manner in two or three days and seem to suffer no ill effects from the operation.

Only a few breeders have dubbed the females and I think it is seldom justified as a good poultry house should not be cold enough to cause freezing of the small combs of the hens. Plymouth Rock hens practically never have frozen combs in a modern hen house. Single comb Leghorn hens might suffer under certain conditions but their combs usually are small or lop over so they are not exposed like the large upright combs of the males.—R. G. Kirby.

OHLS BIG VALUE BABY CHICKS Are GUARANTEED To Live and Thrive

Every Chick Accredited

We are members of the Ohio Accredited Chick Association. This means all birds in our breeding flocks have been culled, banded and approved by inspectors of The Ohio Poultry Improvement Association. It also means that every chick is inspected and must be as advertised.

Free Booklet! telling the merits of Ohio Accredited Chicks and why you can depend upon them to be of known quality.

FREE Poultry Manual. We have prepared a book which tells you how you can raise chicks successfully. It helps you select the right breed, tells you what to feed and how to care for them. It's yours free. **Write Today!**

Poultry Hints

AFTER butchering time do not feed all of the lard cracklings in a few meals or some of the birds may be thrown off their feed as the pork is very rich. Better mix the cracklings in a bran mash and feed sparingly.

* * *

Sliced pumpkins are a good winter feed for hens. The seeds have some food value and are much relished by the birds. Quarter the pumpkins and scatter them inside up around the house and after they have been pecked out, the rinds can be speared with a pitchfork and removed from the litter.

* * *

Watch for overfat hens. If the condition is general in the flock it means that the birds are getting too much corn and too little exercise. By culling out these overfat types of birds and not using them for breeders we believe that flocks can be developed which do not have the tendency to fatten easily, unless they are on special fattening rations being prepared for market.

* * *

The city market is of great advantage to the poultryman if the dealers are over supplied or not paying satisfactory prices. At our local market the birds must be drawn. It takes time to prepare a large number of hens for market but sometimes it is profitable if there is time for the work and other outlets do not look as favorable as they should.

* * *

A poultryman or a farmer with a large flock of poultry must keep accounts or the business cannot be expanded with any degree of safety. It has been the custom to guess the amount of feed eaten by the hens on some farms. The guesses are very unreliable. Often they are overestimated and the hens are not given the proper credit. More often the amount of feed eaten by the birds is underestimated and better hens are needed to pay for the feed plus a profit. Nothing tells of success or failure with poultry quicker than the columns of figures.

* * *

Dampness in the poultry houses in winter is caused by a lack of ventilation. We have seen houses with all the curtains down that were colder than other houses with the curtains raised. In the closed houses the moisture gathered on the ceiling and dropped down into the litter and this dampness gave the house a cold penetrating feeling that was very unpleasant. When the curtains were raised the moisture soon dried up and the atmosphere was fresh and dry and seemed much warmer.

* * *

Colds in winter can practically be eliminated in fresh-air houses if the birds are given the proper feed to keep them in good physical condition. This reduces poultry work by doing away with the fussing with sick birds.

* * *

Rubbing the combs and wattles of male birds with suet is said to help keep them from freezing during cold weather. When the male birds are needed to obtain good hatchable eggs in the late winter it pays to take some pains to keep them in the best of physical condition. Sometimes male birds have very large legs and the bands purchased for the breed may be too tight. If a band is placed beneath the spur it may become tight enough to shut off circulation and cause a frozen foot. We believe in using the bands usually sold for Asiatic breeds to place on the males of the American breeds if colored spiral bands are used. Some of them sold commercially seem a little too small for the breeds they are advertised to fit.—R. G. Kirby.

PAN-A-CE-A

puts hens in laying trim

Put your hen in laying trim —then you have a laying hen

YOU WANT music in your poultry yard—song, scratch, cackle.

You want an industrious hen—a hen that will get off her roost winter mornings, ready to scratch for her breakfast.

A fat, lazy hen may be all right for pot-pie, but for egg-laying—never!

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily, and see the change come over your flock.

See the combs and wattles turn red.

See them begin to cheer up and hop around. See the claws begin to dig in.

That's when you get eggs.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.
60 hens the 5-lb. pkg.
200 hens the 25-lb. pail
500 hens the 100-lb. drum
For 25 hens there is a smaller package

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

Save $20 per cow with a De Laval Milker

Conservatively figured, a De Laval Milker will make at least $20 per cow per year in saving time and increased milk which usually comes as a result of its use and because of its regular, stimulating and soothing action.

Multiply this by 10, 20, 30 or the number of cows you are milking by hand and you get a very conservative idea of what a De Laval Milker really will make you in profit.

In addition, when it is considered that cleaner milk can be produced, that the drudgery and dislike of hand milking are eliminated, and that dairying is made more pleasant for owner, son or hired man, you have the answer why so many people are installing De Laval Milkers—and especially when it is borne in mind that a De Laval Milker can be bought on such liberal terms and such long time that it will actually pay for itself as it is being used.

Send for FREE Catalogs

Trade Allowance on Old Cream Separators for New De Lavals

Money Saving Ideas for Cow, Hog and Hen Farmers

Send Today for Your Copy

Of course you want bigger earnings from your dairy cows, hogs and poultry. The question is *"how to get them?"* This new Jamesway Book may have exactly the answer you need.

It is full of practical ideas, plans and suggestions that other farmers are using—*today*. It is written from experience, and contains only the kind of information that practical dairymen and farmers want. How to improve an old barn—How to get the right floor plan—How to save labor—How to handle the feeding and cleaning jobs, etc.

Send for this book. It is free. It tells you "how" you can install any Jamesway Equipment, steel stanchions, stalls, water cups, carriers, etc.—right now—on our "PAY-FROM-INCREASED-EARNINGS" Plan. Right in your county there is a Jamesway Man, who is able, capable and eager to help you. Our book will tell you how. Write today. Mail the coupon this instant to Dept. T

It Tells You

- How to get a good dairy barn.
- How to remodel an old barn.
- How to get good ventilation.
- The Essentials of a Good Cow Stall.
- How to give cows pasture comfort in the barn.
- How to judge a stanchion.
- How to feed cows for profit.
- How to insure "safety first" with the bull.
- How to make the cleaning job easy.
- How to water your cows in the barn.
- How to have better hogs and bigger litters.
- How to make more money from your hens.
- How Jamesway "Pay-from-Earnings" Plan pays for your equipment as you use it.

And many other helpful pointers on cow, sow and hen problems.

Fodder Gets Moldy

The farmers in this section are having trouble with shredded fodder getting hot and molding in the barn. The mold is of a white nature. Our cattle seem to like the fodder and show no signs of losing flesh. Please advise if this is injurious to dairy or young cattle and what is the best method of taking care of fodder run thru a husker. Please advise, too, if Canada thistle seed will grow when hauled out in manure or if the seed will die if left in the manure in the yard until next spring. I like to haul the manure out as fast as it is made, but have some thistles in my oats and barley straw.—J. E. G., Huntingdon County, Pa.

There are a large number of varieties of mold, some of which are injurious and some of which are not. In fact, a particular species of mold may be injurious under some circumstances and under others not. On general principles it is inadvisable to feed moldy feeds to any kind of valuable dairy animals. On the other hand, ruminants such as dairy cattle will stand molds better than horses. Instances are comparatively few where cattle have been seriously injured by feeds which are slightly moldy.

Add Water to Cut Stover

It would seem that the best plan would be to exercise as much caution as possible in feeding shredded stover such as you mention, and if you have valuable purebred dairy cattle I would not advise its use. Grade cows or young cattle would perhaps not be seriously injured if fed moderate amounts. It would be better to work it off on the young cattle and dry cows rather than the milkers, since it is possible to taint the milk by feeding it.

The best plan for taking care of the fodder which has been thru a husker is to run it thru an ensilage cutter and put it into the silo. If plenty of water is added to the cut stover it will keep well and make a fair quality of silage, tho of course, it will not be as high in feeding value as ensilage containing the ears. If the stover is rather dry when it is put in, one should add a quantity of water at least twice as great by weight as the stover.

Old Seed Won't Grow

If Canada thistle seed get into the manure and are left in it for a few weeks very few of them will grow. Of course, when you haul the manure out in the spring the Canada thistle seed that had been in the manure for only a few days would be likely to grow. If you could arrange your manure heap so that only the well decayed manure would be hauled to the field very little of the Canada thistle seed would grow.—A.A.B.

Silos in Pennsylvania

TWENTY-SIX per cent of Pennsylvania's farms now have silos according to the latest report of L. H. Wible, Director of the Bureau of Statistics, Department of Agriculture. Lancaster County has 3393 silos, a percentage of thirty; Lebanon County has 996, a percentage of 42; Dauphin has 428; Cumberland, 530; Perry, 274; Adams, 587; Franklin, 583, and York, 1173. Lebanon County ranks highest in percentage. —R. I. W.

Dairymen Meet at Harrisburg

THE Pennsylvania Ayrshire Breeders' Association, W. L. Glatfelter, president, will hold a business session during the Farm Products Show in Harrisburg at 1:30 P. M. Tuesday afternoon, January 20 in one of the rooms in the Department of Agriculture. A program will follow the business session.

Jersey cattle breeders will meet at 1:30 on Tuesday afternoon, January 20, to organize a Pennsylvania Jersey Breeders' Association. After the business meeting a program will be given. This meeting will also be held in one of the rooms of the Department of Agriculture.

The Pennsylvania Federation of Holstein-Friesian Breeders will hold their annual banquet at 7 P. M. on Wednesday evening, January 21 to which all breeders and dairymen are invited. At 10 A. M. on Thursday morning the annual business meeting will be held.

Guernsey breeders in Pennsylvania will meet at 1:30 P. M. on Thursday afternoon, January 22, for a luncheon at the Penn-Harris Hotel. A business session will be held following the luncheon at which Karl B. Musser, Secretary of the American Guernsey Cattle Club, will speak.

An interesting program for dairymen has been arranged by a committee of the Pennsylvania Breeders' and Dairymen's Association for Wednesday, January 21 during the week of the Farm Products Show at Harrisburg. The morning session will be devoted to a discussion of the eradication of tuberculosis and in the afternoon, production and marketing of dairy products will be discussed.

Dairy Program

Wednesday, January 21, Senate Caucus Room.

9:30 A. M.—The eradication of bovine tuberculosis, present situation in Pennsylvania, Dr. T. E. Munce, Director of Bureau of Animal Industry.

10:15 A. M.—The requirements of the Department of Agriculture necessary for an adequate program of bovine tuberculosis eradication. Hon. Frank P. Willits, Secretary of Agriculture, Harrisburg, Pa.

11:00 A. M.—What immediate action should dairymen take in support of a program of tuberculosis eradication? R. R. Welch, Grove City, Pa.

1:30 P. M.—Economy in production the basis of successful dairy farming. E. B. Fitts, head of dairy extension, State College, Pa.

2:00 P. M.—Factors essential in the successful marketing of dairy products by the co-operative plan. H. G. Niesley, specialist in marketing, State College, Pa.

2:45 P. M.—The why and how of clean milk. C. I. Cohee, in charge, Dept. of Quality Control, Philadelphia, Pa.

3:30 P. M.—Practical method for determining quality in milk. Charles Detweiler, chief, Sanitation Department, Pittsburgh District Dairy Council, Century Building, Pittsburgh, Pa.—B.

FOWL PLAGUE RULES

Regulation Adopted to Protect Pennsylvania

ANIMAL Industry Regulation No. 515, effective December 30, 1924, which has been issued over the names of F. P. Willits, Pennsylvania Secretary of Agriculture, and T. E. Munce, Director of the Bureau of Animal Industry, warns all persons against any act that may tend to introduce Fowl Plague into Pennsylvania.

Regulation No. 515 is as follows: Under the authority of the Acts of July 22, 1913, and June 7, 1923, the Pennsylvania Department of Agriculture has adopted and will enforce the following rules, subject to subsequent changes:

1. The movement or transportation of live poultry for any purpose from the states of Connecticut, Delaware, New Jersey, New York and Rhode Island into the state of Pennsylvania is hereby prohibited.

2. Live poultry from the District of Columbia and from states other than those named in Section 1 of this Regulation may be brought into Pennsylvania for immediate slaughter only as provided by Section 4.

3. The movement or transportation of live poultry from the District of Columbia and from states other than those named in Section 1 of this Regulation into Pennsylvania for purposes other than immediate slaughter is prohibited unless each consignment is accompanied by a special permit issued by the Director of the Bureau of Animal Industry, Pennsylvania Department of Agriculture, Harrisburg, Pa.

4. All crates, coops or other containers, and all railroad cars, wagons, auto trucks or other vehicles and all freight compartments on boats and vessels that are in use for the handling, storing or transporting of live poultry shall not enter Pennsylvania unless accompanied by an official certificate stating that the container, car, vehicle or compartment has been cleaned and disinfected under proper federal or state supervision: said certificate shall accompany the container, car, vehicle or compartment to destination in Pennsylvania, and a copy of said certificate shall be forwarded immediately to the Pennsylvania Bureau of Animal Industry, Harrisburg, Pa.

5. This Regulation No. 515 does not apply to movements of poultry when such movements are entirely within the state of Pennsylvania.

Lynchings in 1924

THERE were sixteen persons lynched in 1924. This is the smallest number lynched in any year since records of lynchings have been kept, and is seventeen less than the number thirty-three for the year 1923 and forty-one less than the number fifty-seven for the year 1922. Nine of the persons lynched were taken from the hands of the law, six from jails and three from officers of the law outside of jails.

There were forty-five instances in which officers of the law prevented lynchings. Two women, one white and one colored, were among those thus saved. Eight of these preventions of lynchings were in northern states and thirty-seven in southern states.

The states in which lynchings occurred, and the number in each state are as follows: Florida, five; Georgia, two; Illinois, one; Kentucky, one; Louisiana, one; Mississippi, two; Missouri, one; South Carolina, one; Tennessee, one; Texas, one.

The Success of the Coach as BUICK builds it

Standard Six Coach $1295
Master Six Coach $1495

Prices f. o. b. Buick Factories: government tax to be added. Ask about the G. M. A. C. Purchase Plan, which provides for Deferred Payments.

Everyone who has seen the Coach *as Buick builds it* knows why *this* Coach has received such sweeping public approval.

The Buick Coach is a real closed car—built to Buick's high closed-car standards. Fisher body. Graceful lines. Two wide doors, hinged at the front, enable rear-seat passengers to enter or leave either door without disturbing people in front seats. Duco finish. Different colors for each of the two coach models.

The chassis! The identical chassis that has won Buick world-recognition for dependability and economy! Valve-in-head engine. Buick exclusive automatic heat control for immediate all-weather starting. All driving units *sealed* in iron and steel housings to keep dirt out and lubrication in. Buick 4-wheel Brakes which function perfectly in any weather.

And the price! Never before, a closed car of such fine quality at such low cost!

These are the reasons for the phenomenal success of the Coach *as Buick builds it!*

Farm Electrification—
a challenge and a responsibility

The problem of electrifying the farm is a challenge both to scientific agriculture and to electric engineering. With agriculturists and engineers joining forces in solving this problem, the possibilities of farm electrification are limited only by man's ingenuity.

This splendid opportunity to serve the farm and benefit the entire country is not being overlooked either by the agriculturists or others interested. A committee composed of eight great organizations has been studying and carrying on experiments seeking solutions to these problems.

This general committee and local committees in twelve states have before them, among others, the problems of:

The lowering of farm production and marketing costs by the wholesale application of electric power.

The raising of the farmers' standards of living by the introduction of electrical conveniences.

The closer relation of the farmer to industry and transportation through the interconnection of electrical distribution systems and the wider use of electric power.

These studies and the solutions which are expected to result must have a profound effect upon every community.

Write for the attractive booklet on farm electrification which will be mailed to you without cost. Read it and pass it on to your neighbor.

The committee mentioned above is composed of the American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, U. S. Departments of Agriculture, Commerce and Interior, Farm Lighting Manufacturing Association and the National Electric Light Association.

The Farm Electric

All Devices You've Dreamed of to Be Displayed

VISITORS to the Electric Farm, which will be open to inspection during the State Farm Products Show at Harrisburg, January 19 to 23, will have an opportunity to see practically every kind of farm and home electrical equipment in existence. The committee in charge has just announced a list of the appliances which are being installed on the Electric Farm, which is the J. Q. A. Rutherford farmstead near Harrisburg.

The committee explains that it is not supposed that any farmer will find it practical to have all the exhibited appliances on his farm. The farm is being electrified to show in an impressive way the possibilities of electricity. To make the exhibit as complete as possible, all sorts of devices, some so recently developed that they have never been shown to the public before, will be displayed. All the equipment to be exhibited is being donated by manufacturers and dealers.

A laundry, kitchen, dining room, living room and bathroom will be wired and lighted. The laundry will have a washing machine and ringer, a centrifugal clothes dryer, small and large hand iron, mangle iron, an electric pump, and a trouser press.

What a House It Will Be

In addition to lighting in the kitchen, there will be an electric range, electric dish washer, meat grinder, cake mixer, ventilating fan, desk fan, electric refrigerator, buffer and grinder, apple pealer, vacuum cleaner, electric ice cream freezer, and an electric kitchen table equipped with mixers, heaters, etc.

The dining room will sparkle with electrical devices. An electric toaster, percolator, tea samovar, table stove, waffle iron, desk fan, egg cooker and electric crumb brush and cleaner will be on display.

The living room will have a complete radio receiving set with loud speaker, an ornamental electric fountain, electric heating logs, portable sewing machine with electric sew-light, electric thermostat for controlling temperature in house, electric phonograph and an electric reproducing piano.

In the bedroom there will be a heating pad, fan, heater and bed and dresser lamps, and in the bathroom an electric heater, immersion heater, electrically heated hair-drying blower, electric hair drying comb, electric vibrator and an electric razor.

And Buildings Outside, Too

The barn, sheds, poultry house and workshop will be just as completely electrified as the house. About the farm, there will be on display, a wood splitter, power wood saw, threshing machine, portable chort motor, electric floor cleaning machine, clipping machine, grooming machine, ventilating fans, corn sheller, crusher, feed grinder, combination mill, fanning mill, potato grader, hay hoist, deep well pump jack, electric alarm siren, ensilage cutter and blower, bailer, fodder shredder, and a temperature indicator to place in mow of hay to eliminate danger of spontaneous combustion.

The poultry house will have everything electrified except the chickens. The equipment includes an electric incubator and brooder, electric egg candler, grain cracker, oyster shell grinder, time switch to regulate artificial lighting and an electrically heated poultry waterer.

The dairy will be the scene of more electrical activity. A milking machine, cream separator, milk clarifier, electric refrigerator with quick milk cooling attachment, churn and butter worker and bottle washer will feature the equipment here.

Last but not least is the workshop, where it will be shown that electricity can aid the farmer the same as in the house and barn. Here the soldering iron, grindstone, drill press, electric hand drill, electric forge, electric bench grinder, portable flood lamp for emergency or night work, centrifugal fire pump with hose, chemical fire extinguisher and battery-less electric hand lamp will be seen.

Open to All Interested

Representatives of the Giant Power Survey, State Department of Agriculture, Pennsylvania State Grange, Pennsylvania State College, State Council of Agricultural Associations and the Pennsylvania Electric Association including electrical manufacturers and dealers, make up the committee which is sponsoring the electrification of the farm.

Every appliance will be shown in its proper place on the farm and specialists will be present to explain various features and to answer questions, C. K. Steinmetz, manager of the exhibition, states. The farm will be open to the public from January 14 to 24, and special efforts will be made to take care of all interested farm products show visitors during the week of January 19.

Painted Buildings

THE lack of paint on the exterior and interior of buildings which house livestock or poultry may not directly mean an increase in tuberculosis, cholera and numerous other animal and poultry diseases which cost farmers such huge sums annually, but there is no gainsaying the fact that in the prevention and treatment of sickness, cleanliness is a vital factor.

Sanitary, washable, light colored walls on the interior, and a moisture-proof paint film on the exterior of structures for housing animals, do much to prevent disease.

Barns, hog houses and poultry houses which are unpainted absorb moisture. This works thru the wood, rotting it and making interiors cold and damp. Animals housed in such buildings, especially young animals or poultry, will have less physical resistance to disease and colds.

Keep Away the Germs

Disease germs and vermin thrive in dark, damp and poorly ventilated places. Let germs and vermin once gain a foothold in such surroundings and their eradication will cost much time and money.

Paint prevents the decay of buildings, and in this way makes them less apt to harbor germs and germ carriers. In painting the interior of structures for housing animals a paint containing non-poisonous pigments should be used.

Well painted buildings are generally better kept and the livestock, being better cared for, is less subject to disease. The very fact that a building is well painted gives the owner more pride in the condition of the interior and the care of stock. An animal will pay greater returns in every way if housed in well-lighted, clean surroundings.

GOLD SEAL

REMOVE SEAL WITH DAMP CLOTH

Important Warning!

There is only one "Congoleum" and it is identified by the Gold Seal pasted on every pattern. "Congoleum" is a registered trade name and the exclusive property of Congoleum-Nairn Inc. If you want "Congoleum" be sure to look for the Gold Seal.

On the floor is shown Congoleum Rug Pattern No. 325. In the 6 x 9 foot size it costs only $9.00.

"Brush the snow off, children. It can't hurt Mother's new Congoleum Rug"

Heedless little feet that love to tramp through snow and splash in puddles, that seem to pick up dirt wherever they go—bring no worries to the mistress of this kitchen.

For there's a *Gold-Seal* Congoleum Rug on the floor and she knows it can be cleaned in a moment. Just a few strokes with a damp mop and the cheerful pattern will be as bright and spotless as new.

It's the smooth, seamless surface and heavy waterproof base of Congoleum that make it so easy to clean. Dirt and dust cannot work into these rugs. Liquids and spilled things cannot stain them.

Many Beautiful Patterns

And the attractive designs are so varied that you can easily find one suited to any room in the house. There are artistic and elaborate Oriental motifs, dainty and fascinating floral effects and neat tile, mosaic and conventional patterns.

Gold-Seal Congoleum Rugs are no bother at all to lay. After a few hours they'll hug the floor without tacks, cement or fastening of any other kind.

And you'll go far before you'll find such big value at so low a price.

Popular Sizes—Low Prices

6 x 9 ft $9.00	Pattern No. 408, shown below, is made in all the sizes. The other patterns illustrated are made in the five large sizes only.	1½ x 3 ft $ .60
7½ x 9 ft 11.25		3 x 3 ft 1.40
9 x 9 ft 13.50		3 x 4½ ft 1.95
9 x 10½ ft 15.75		3 x 6 ft 2.50
9 x 12 ft 18.00		

Gold-Seal Congoleum By-the-Yard. The same flat-lying, durable, easily-cleaned material as the rugs but made without borders for use where it is desired to cover the entire floor. Lies flat without any fastening.

Two-yard width —**85c** per square yard
Three-yard width —**95c** per square yard

Owing to freight rates prices in the South and west of the Mississippi are higher than those quoted.

Farm Electrification—
a challenge and a responsibility

The problem of electrifying the farm is a challenge both to scientific agriculture and to electric engineering. With agriculturists and engineers joining forces in solving this problem, the possibilities of farm electrification are limited only by man's ingenuity.

This splendid opportunity to serve the farm and benefit the entire country is not being overlooked either by the agriculturists or others interested. A committee composed of eight great organizations has been studying and carrying on experiments seeking solutions to these problems.

This general committee and local committees in twelve states have before them, among others, the problems of:

The lowering of farm production and marketing costs by the wholesale application of electric power.

The raising of the farmers' standards of living by the introduction of electrical conveniences.

The closer relation of the farmer to industry and transportation through the interconnection of electrical distribution systems and the wider use of electric power.

These studies and the solutions which are expected to result must have a profound effect upon every community.

Write for the attractive booklet on farm electrification which will be mailed to you without cost. Read it and pass it on to your neighbor.

The committee mentioned above is composed of the American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, U. S. Department of Agriculture, Commerce and Interior, Farm Lighting Manufacturing Association and the National Electric Light Association.

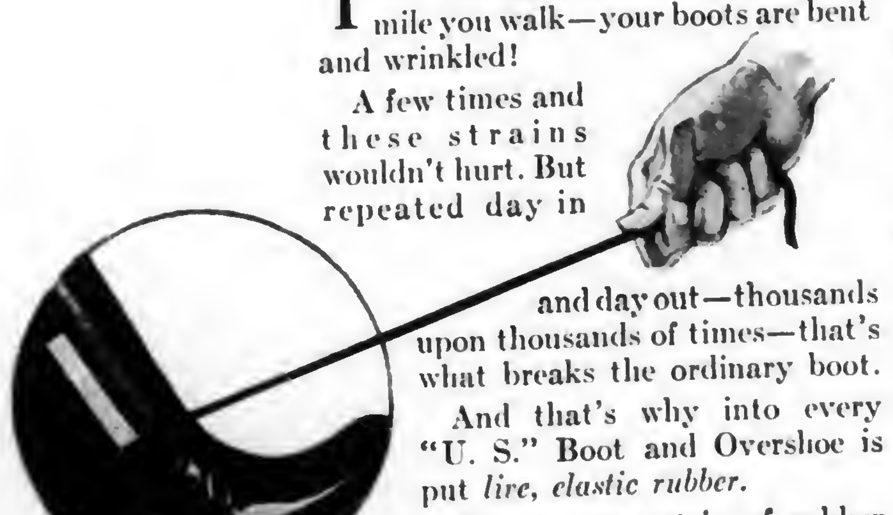
It's a Brute for Wear!

Two facts about "U.S." it will pay you to know - - - -



TWO thousand times for every single mile you walk—your boots are bent and wrinkled!

A few times and these strains wouldn't hurt. But repeated day in and day out—thousands upon thousands of times—that's what breaks the ordinary boot.

And that's why into every "U. S." Boot and Overshoe is put *live, elastic rubber.*

If you cut a strip of rubber from a "U. S." Boot, you'll find it will stretch more than five times its length without breaking—and snap back into shape like an elastic band. This live rubber *stays* flexible—and waterproof.

What's more, in this live rubber are anchored layer on layer of tough fabric reinforcements. Where the hardest strains come, there are *as many as eleven* separate layers of rubber and fabric. They reduce chances of breaking to a minimum.

As a result of these important facts, farmers in every section of the country are finding "U.S." Boots and Overshoes a big economy.

"U. S." Boots and Overshoes wear longer because they're *built* to wear longer.

It will pay you to ask for "U. S."

Other "U. S." Rubber Footwear

You'll find every type of rubber footwear in the big "U. S." line. There's the Walrus, the famous all-rubber overshoe—the "U. S." lace Bootee, a rubber workshoe for fall and spring—"U. S." Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U. S." Trade Mark whenever you buy—the honor mark of the largest rubber organization in the world.

Butler Dairymen Lay Plans

Several New Purebred Sire Associations Formed

By A. L. Beam

BREEDERS of Jerseys, Guernseys, and Holsteins in Butler County, assisted by S. J. Brownell, State College extension specialist, County Agent Mandeville, and R. C. Wiggins, agricultural expert employed by the Butler County First National Bank, adopted a well balanced breeding program for 1925 at a series of meetings held during the week of December eighth.

Holstein breeders on Wednesday organized, under the bank plan, a bull association of three blocks for their breed. This makes the third Holstein bull association in the county and the second bull association to be formed with the aid of the Butler County National Bank.

Guernsey breeders met at the Butler Y. M. C. A. on Thursday to discuss plans for the coming year. A tentative organization was formed which voted to form two Guernsey bull associations of three blocks each. Six well bred sires, one for each block, are to be purchased. Then, in order to give each dairyman an unlimited opportunity in breeding, one outstanding sire will be purchased for duty in both associations. One of the best bred bulls available will be secured. It is hoped that a son of a world's record cow can be obtained.

To Buy a "Central Sire"

Sixty of the highest producing cows in the two associations will be bred to this sire. He will be known as the "Central Sire" and when he can no longer be used on account of inbreeding, or when the two associations are able to buy a better sire, he will be used to replace a bull in one of the association blocks. Thus, eventually it is hoped to secure an outstanding sire in each block.

A real need for well bred sires such as the Guernsey breeders hope to secure, and especially for the one exceptionally good sire, now exists in the county. An outstanding example is found in the herd of F. R. Hartell, Renfrew, who has developed a senior four-year-old which now ranks second in her class in the United States with a record of 18,942 pounds of milk and 893 pounds of butterfat. This is within seven pounds of breaking a world's record.

Many other Guernsey breeders will benefit by the far-sighted program outlined for 1925.

Jersey Breeders' Plans

The Jersey breeders around Harrisville, not to be outdone by their Holstein and Guernsey friends, met on Friday, formed a tentative organization and outlined plans for a Jersey bull association consisting of three blocks.

Many good grade Jerseys are now found in this community and by using only well bred sires, the organizers hope soon to have cows of much higher producing ability. In this association stress will be placed upon production in the sire's pedigree as each one must be from a dam with a record of at least 700 pounds of butterfat.

"Look' Em Over" Week

FARM machinery prepared and ready for the field is the object of Repair Week which was set for the last week of February by implement dealers of the state of Indiana at their convention held recently.

Repairs ordered during Repair Week mean "Preparedness" for farmers and relief from the congestion in the shipping rooms of implement companies which always occurs when the working season opens.

Orders placed in time give the local dealers a fair chance to serve their customers, especially when the part is not carried in stock. Waiting for parts after the work season is on is troublesome both to farmers and dealers.

"Look 'em over" is the motto for Repair Week.

Corn Borer in Pennsylvania

C. H. **HADLEY**, Director, State Bureau of Plant Industry, has issued the following statement on the present European corn borer situation in Pennsylvania:

"During the fall of 1924 extensive and detailed scouting of infested territory by representatives of the Federal Bureau of Entomology, showed a very extensive spread of the insect during the season, and a very noticeable increase in the density of the infestation. . . .

"At the present time the infestation is spread over several counties, including all of Erie County, all of Crawford County, the townships of Greene, Sugar Grove, Salem and Hickory in Mercer County, and the townships of Columbia, Freehold, Sugar Grove, Conewingo and Eldred in Warren County. The area included within the total infested territory comprises some 1999 square miles in northwestern Pennsylvania, according to records furnished by the Federal Bureau of Entomology.

Increased Density of Infestation

"The infestation has likewise increased notably with respect to density. Whereas in previous years it was very difficult to find more than one, or at most two borers in a single stalk, and such infested stalks very few indeed, during the past season it has not been uncommon to find a fair proportion of the stalks of certain fields infested, and the infestation per stalk sometimes ran as high as seven or eight larvae or borers. In Crawford County in the newly infested territory many fields were found where fifty to seventy-five larvae could easily be found in a very short time. . .

Campaign Has Been Undertaken

"The development of the European corn borer situation during the past year in Pennsylvania has been such as to make it necessary for the Department to undertake a campaign of repression and limitation of the spread of this insect. . . . The program which should be followed by Pennsylvania should be one which will be in harmony with that now being carried on by the states of New York, Ohio and Michigan, in cooperation with the Federal Government. There should be an extension of quarantine restrictions now in force (but not being particularly enforced heretofore), covering the territory now known to be infested, and restricting the movement of sweet corn and certain other products from infested territory to non-infested territory subject to inspection and certification where practical. If such a quarantine can not be legally enforced under existing legislation, a law should be passed similar to that of 1923 covering the Japanese beetle, providing the necessary authority. Regulations should be adopted requiring the general use of certain farm practices which will tend to hold down the infestation of the insect to the minimum, and at the same time improve the general cultural practice of the district. . . ."

BONDS THAT BUILD UP THE FARMING BUSINESS

OVER 300,000 farmers have borrowed money on first mortgages through the twelve co-operative Federal Land Banks. Better terms and lower interest rates enable them to steadily reduce their indebtedness—put their farms on a paying basis.

Money for these Loans is secured through the issue of Federal Land Bank Bonds. In this way, the savings of thousands of investors, large and small, are gathered into the Banks to be distributed to those farmers who can use them profitably.

There is no safer investment than these Bonds. The Federal Land Banks operate under strict Government supervision and are managed by men long trained in banking methods and well acquainted with farm conditions. Every Bond is guaranteed jointly by *all* the twelve Federal Land Banks with combined capital and reserve exceeding $50,000,000.

Federal Land Bank Bonds are tax-free, inheritance taxes only excepted. And interest received from them is free from all income taxes.

Money invested in Federal Land Bank Bonds earns a good rate of interest, unfailingly paid twice yearly. Price and current rate will be gladly quoted on request.

In case of need, Federal Land Bank Bonds can be turned into cash on short notice. Or, they can be used as security for a loan at your local bank.

A Federal Land Bank Bond may be purchased for as little as $40 or $100. Other denominations are: $500, $1,000, $5,000 and $10,000. Your choice of coupon or registered form. Delivered by registered mail; all correspondence confidential. Look for the words "The Federal Land Bank" appearing at the top of every Federal Land Bank Bond.

The Federal Land Banks are located at

Springfield, Mass. New Orleans, La. Wichita, Kansas
St. Louis, Mo. Berkeley, Cal. Omaha, Nebr.
Louisville, Ky. St. Paul, Minn. Baltimore, Md.
Columbia, S. C. Houston, Texas Spokane, Wash.

Write for Federal Farm Loan Board Circular No. 16 descriptive of these Bonds, addressing nearest Federal Land Bank or the Fiscal Agent.

GOOD FARMING PAYS

Every farmer wants to save labor, time, horsepower, seed and raise bigger, better and surer crops. The WESTERN Pulverizer, Packer & Mulcher (3 machines in 1) will do all this. It pulverizes and packs as deep as plowed and forms a loose, granular, moisture-retaining mulch on top—making a perfect seedbed—in one operation. It makes 5 to 10 bushels more per acre by rolling winter wheat or other growing grain in spring, whether ground is hard-crusted and cracked, heaved, loose or unpacked. The WESTERN has no equal for this work, or for making seedbed for wheat, corn, alfalfa or any other crops; or for covering alfalfa, clover and grass seed.

GET OUR FREE CATALOG AND BOOK ON SEEDBEDS It shows the machine and its work by photos taken in the fields—Explains its principle and construction: why it does better work with less horse-power and saves one-third seed; why it is the only roller that leaves a mulch on top of the packed soil. It contains letters from many users, proving our statements, and much other valuable information. "Worth its Weight in Gold." Write TODAY for Catalog and delivered price from nearest shipping point.

WESTERN LAND ROLLER CO., Box 152 Hastings, Nebr.

The Improved "Riggs" Walking Cultivator

Superior to any Riding Cultivator on the market, BECAUSE they cut ALL the ground between the shares, leaving no hard ridges hence

Kill All the Weeds

They cost less than ONE-HALF as much as a good Riding Cultivator. They do more and BETTER work, yet will give THREE TIMES as many years of satisfactory service. Send for Catalogue.

If you can not buy them of your local Dealer we will ship direct.

THOS. PEPPLER, SON & CO.,
BOX 20, HIGHTSTOWN, N. J.

We Also Manufacture the Perfection Sprayers and Marker

As Low as $10

Buy your saw direct at lowest factory prices. Guaranteed staunch, durable and dependable. Cost as little as $10.

Hertzler & Zook Portable Wood SAW

Saws firewood, lumber, lath, posts, etc. Ripping table can be attached. Lowest priced practical saw made. Other styles and sizes at money-saving prices. Made of best materials. $10,000.00 bond backs our guarantee! *Write today for* FREE CATALOG *showing all kinds saws, engines, feed mills, concrete mixer and fences, Ford & Fordson Attachments, etc. Full of surprising bargains.*

Several New Purebred Sire Associations Formed

By A. L. Beam

BREEDERS of Jerseys, Guernseys, and Holsteins in Butler County, assisted by S. J. Brownell, State College extension specialist, County Agent Mandeville, and R. C. Wiggins, agricultural expert employed by the Butler County First National Bank, adopted a well balanced breeding program for 1925 at a series of meetings held during the week of December eighth.

Holstein breeders on Wednesday organized, under the bank plan, a bull association of three blocks for their breed. This makes the third Holstein bull association in the county and the second bull association to be formed with the aid of the Butler County National Bank.

Guernsey breeders met at the Butler Y. M. C. A. on Thursday to discuss plans for the coming year. A tentative organization was formed which voted to form two Guernsey bull associations of three blocks each. Six well bred sires, one for each block, are to be purchased. Then, in order to give each dairyman an unlimited opportunity in breeding, one outstanding sire will be purchased for duty in both associations. One of the best bred bulls available will be secured. It is hoped that a son of a world's record cow can be obtained.

To Buy a "Central Sire"

Sixty of the highest producing cows in the two associations will be bred to this sire. He will be known as the "Central Sire" and when he can no longer be used on account of inbreeding, or when the two associations are able to buy a better sire, he will be used to replace a bull in one of the association blocks. Thus, eventually it is hoped to secure an outstanding sire in each block.

A real need for well bred sires such as the Guernsey breeders hope to secure, and especially for the one exceptionally good sire, now exists in the county. An outstanding example is found in the herd of F. R. Hartell, Renfrew, who has developed a senior four-year-old which now ranks second in her class in the United States with a record of 18,942 pounds of milk and 893 pounds of butterfat. This is within seven pounds of breaking a world's record.

Many other Guernsey breeders will benefit by the far-sighted program outlined for 1925.

Jersey Breeders' Plans

The Jersey breeders around Harrisville, not to be outdone by their Holstein and Guernsey friends, met on Friday, formed a tentative organization and outlined plans for a Jersey bull association consisting of three blocks.

Many good grade Jerseys are now found in this community and by using only well bred sires, the organizers hope soon to have cows of much higher producing ability. In this association stress will be placed upon production in the sire's pedigree as each one must be from a dam with a record of at least 700 pounds of butterfat.

"Look' Em Over" Week

FARM machinery prepared and ready for the field is the object of Repair Week which was set for the last week of February by implement dealers of the state of Indiana at their convention held recently.

Repairs ordered during Repair Week mean "Preparedness" for farmers and relief from the congestion in the shipping rooms of implement companies which always occurs when the working season opens.

Orders placed in time give the local dealers a fair chance to serve their customers, especially when the part is not carried in stock. Waiting for parts after the work season is on is troublesome both to farmers and dealers.

"Look 'em over" is the motto for Repair Week.

Corn Borer in Pennsylvania

C. H. HADLEY, Director, State Bureau of Plant Industry, has issued the following statement on the present European corn borer situation in Pennsylvania:

"During the fall of 1924 extensive and detailed scouting of infested territory by representatives of the Federal Bureau of Entomology, showed a very extensive spread of the insect during the season, and a very noticeable increase in the density of the infestation. . . .

"At the present time the infestation is spread over several counties, including all of Erie County, all of Crawford County, the townships of Greene, Sugar Grove, Salem and Hickory in Mercer County, and the townships of Columbia, Freehold, Sugar Grove, Conewingo and Eldred in Warren County. The area included within the total infested territory comprises some 1999 square miles in northwestern Pennsylvania, according to records furnished by the Federal Bureau of Entomology.

Increased Density of Infestation

"The infestation has likewise increased notably with respect to density. Whereas in previous years it was very difficult to find more than one, or at most two borers in a single stalk, and such infested stalks very few indeed, during the past season it has not been uncommon to find a fair proportion of the stalks of certain fields infested, and the infestation per stalk sometimes ran as high as seven or eight larvae or borers. In Crawford County in the newly infested territory many fields were found where fifty to seventy-five larvae could easily be found in a very short time. . .

Campaign Has Been Undertaken

"The development of the European corn borer situation during the past year in Pennsylvania has been such as to make it necessary for the Department to undertake a campaign of repression and limitation of the spread of this insect. . . . The program which should be followed by Pennsylvania should be one which will be in harmony with that now being carried on by the states of New York, Ohio and Michigan, in cooperation with the Federal Government. There should be an extension of quarantine restrictions now in force (but not being particularly enforced heretofore), covering the territory now known to be infested, and restricting the movement of sweet corn and certain other products from infested territory to non-infested territory subject to inspection and certification where practical. If such a quarantine can not be legally enforced under existing legislation, a law should be passed similar to that of 1923 covering the Japanese beetle, providing the necessary authority. Regulations should be adopted requiring the general use of certain farm practices which will tend to hold down the infestation of the insect to the minimum, and at the same time improve the general cultural practice of the district . . . "

BONDS THAT BUILD UP THE FARMING BUSINESS

OVER 300,000 farmers have borrowed money on first mortgages through the twelve co-operative Federal Land Banks. Better terms and lower interest rates enable them to steadily reduce their indebtedness—put their farms on a paying basis.

Money for these Loans is secured through the issue of Federal Land Bank Bonds. In this way, the savings of thousands of investors, large and small, are gathered into the Banks to be distributed to those farmers who can use them profitably.

There is no safer investment than these Bonds. The Federal Land Banks operate under strict Government supervision and are managed by men long trained in banking methods and well acquainted with farm conditions. Every Bond is guaranteed jointly by *all* the twelve Federal Land Banks with combined capital and reserve exceeding $50,000,000.

Federal Land Bank Bonds are tax-free, inheritance taxes only excepted. And interest received from them is free from all income taxes.

Money invested in Federal Land Bank Bonds earns a good rate of interest, unfailingly paid twice yearly. Price and current rate will be gladly quoted on request.

In case of need, Federal Land Bank Bonds can be turned into cash on short notice. Or, they can be used as security for a loan at your local bank.

A Federal Land Bank Bond may be purchased for as little as $40 or $100. Other denominations are: $500, $1,000, $5,000 and $10,000. Your choice of coupon or registered form. Delivered by registered mail; all correspondence confidential. Look for the words "The Federal Land Bank" appearing at the top of every Federal Land Bank Bond.

The Federal Land Banks are located at

Springfield, Mass.
New Orleans, La.
Wichita, Kansas
St. Louis, Mo.
Berkeley, Cal.
Omaha, Nebr.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

The Story Thus Far

BART BAYNES was an orphan who lived on a farm in Lickitysplit with his Aunt Deel and Uncle Peabody Baynes. Aunt Deel was a little beyond forty, jealously devoted to her brother, Uncle Peabody.

In 1831, when the story opens, Bart was a small lad of seven who was always getting into trouble, worrying his maiden aunt and bachelor uncle unmercifully. One day during that year Bart had his first glimpse of the Silent Woman—Rovin' Kate—who told his fortune. Tho he must encounter four great perils he would be strong and the friend of many people.

Early in his career Bart found a friend in the Comptroller of Canton Village, Silas Wright. This was considered a very great honor by his aunt and uncle. One evening in early summer, soon after the two had become fast friends, Silas Wright suggested to Uncle Peabody that they all go fishing. And so next morning the three, Silas Wright, Uncle Peabody and Bart, set out for Bill Seaver's camp—accompanied by Bill—for a fishing trip. What a trip that was to the small boy. There was only one thing to spoil the fun—while he went fishing with the Comptroller he left Uncle Peabody with Bill Seaver, and Bill would swear! When Bart returned his beloved uncle had fallen into the evil ways of Bill! But Aunt Deel straightened out the offender with a strap when they reached home! Shortly after this memorable trip Bart received a box of books from Silas Wright—a treasure indeed in that unread household.

Continued

AUNT DEEL began with The Stolen Child. She read slowly and often paused for comment or explanation or laughter or to touch the corner of an eye with her handkerchief in moments when we were all deeply moved by the misfortunes of our favorite characters, which were acute and numerous. Often she stopped to spell out phrases of French or Latin, whereupon Uncle Peabody would exclaim:

"Call it 'snags' and go on."

The "snags" were numerous in certain of the books we read, in which case Uncle Peabody would exclaim:

"Say, that's purty rough plowin'. Mebbe you better move into another field."

How often I have heard Aunt Deel reading when the effect was like this:

"The Duchess exclaimed with an accent which betrayed the fact that she had been reared in the French Capital: 'Snags!' Whereupon Sir Roger rejoined in French equally patrician: 'Snags!' "

Those days certain authors felt it necessary to prove that their education had not been neglected or forgotten. Their way was strewn with fragments of classic lore intended to awe and mystify the reader, while evidences of correct religious sentiment were dropped, here and there, to reassure him. The newspapers and magazines of the time, like certain of its books, were salted with little advertisements of religion, and virtue and honesty and thrift.

In those magazines we read of the great West—"the poor man's paradise"—"the stoneless land of plenty"; of its delightful climate, of the ease with which the farmer prospered on its rich soil. Uncle Peabody spoke playfully of going West, after that, but Aunt Deel made no answer and concealed her opinion on that subject for a long time. As for myself, the reading had deepened my interest in east and west and north and south and in the skies above them. How mysterious and inviting they had become!

ONE evening a neighbor had brought the Rebublican from the post-office. I opened it and read aloud these words, in large type at the top of the page:

Silas Wright Elected to the U. S. Senate.

"Well I want to know!" Uncle Peabody exclaimed. "That would make me forgit it if I was goin' to be hung. Go on and read what is says."

I read of the choosing of our friend for the seat made vacant by the resignation of William L. Marcy, who had been elected governor, and the parts which most impressed us were these words from a letter of Mr. Wright to Azariah Flagg of Albany, written when the former was asked to accept the place:

"I am too young and too poor for such an elevation. I have not had the experience in that greater theatre of politics to qualify me for a place so exalted and responsible. I prefer therefore the humbler position which I now occupy."

"That's the way," said Uncle Peabody. "They had hard work to convince him that he knew enough to be Surrogate."

"Big men have little conceit—ayes!" said Aunt Deel with a significant glance at me.

The candles had burned low and I was watching the shroud of one of them when there came a rap at the door. It was unusual for any one to come to our door in the evening and we were a bit startled. Uncle Peabody opened it and old Kate entered without speaking and nodded to my aunt and uncle and sat down by the fire. Vividly I remembered the day of fortune-telling. The same gentle smile lighted her face as she looked at me. She held up her hand with four fingers spread above it.

"Ayes," said Aunt Deel, "there are four perils."

My aunt rose and went into the but'ry while I sat staring at the ragged old woman. Her hair was white now and partly covered by a worn and faded bonnet. Forbidding as she was I did not miss the sweetness in her smile and her blue eyes when she looked at me. Aunt Deel came with a plate of doughnuts and bread and butter and head cheese and said in a voice full of pity:

"Poor ol' Kate—ayes! Here's somethin' for ye—ayes!"

She turned to my uncle and said:

"Peabody Baynes, what'll we do—I'd like to know—ayes! She can't rove all night."

"I'll get some blankets an' make a bed for her, good 'nough for anybody, out in the hired man's room over the shed," said my uncle.

HE BROUGHT the lantern—a little tower of perforated tin—and put a candle inside of it. Then he beckoned to the stranger, who followed him out of the front door with the plate of food in her hands.

"Well I declare! It's a long time since she went up this road—ayes!" said Aunt Deel, yawning as she resumed her chair.

"Who is ol' Kate?" I asked.

"Oh, just a poor ol' crazy woman—wanders all 'round—ayes!"

"What made her crazy?"

"Oh, I guess somebody misused and deceived her when she was young—ayes! It's an awful wicked thing to do. Come, Bart—go right up to bed now. It's high time—ayes!"

"I want to wait 'til Uncle Peabody comes back," said I.

"Why?"

"I—I'm afraid she'll do somethin' to him."

"Nonsense! Ol' Kate is just as harmless as a kitten. You take your candle and go right up to bed—this minute—ayes!"

I went up-stairs with the candle and undressed very slowly and thoughtfully while I listened for the footsteps of my uncle. I did not get into bed until I heard him come in and blow out his lantern and start up the stairway. As he undressed he told me how for many years the strange woman had been roving in the roads "up hill and down dale, thousands an' thousands o' miles," and never reaching the end of her journey.

In a moment we heard a low wail above the sound of the breeze that shook the leaves of the old "popple" tree above our roof.

"What's that?" I whispered.

"I guess it's ol' Kate ravin'," said Uncle Peabody.

It touched my heart and I lay listening for a time but heard only the loud whisper of the popple leaves.

SOME strangers came along the road those days—hunters, peddlers and the like—and their coming filled me with a joy which mostly went away with them, I regret to say. None of these, however, appealed to my imagination as did old Kate. But there was one stranger greater than she—greater, indeed, than any other who came into Ratleroad. He came rarely and would not be long detained. How curiously we looked at him, knowing his fame and power! This great stranger was Money.

I shall never forget the day that my uncle showed me a dollar bill and a little shiny, gold coin and three pieces of silver, nor can I forget how carefully he watched them while they lay in my hands and presently put them back into his wallet. That was long before the time of which I am writing. I remember hearing him say, one day of that year, when I asked him to take us to the Caravan of Wild Beasts which was coming to the village:

"I'm sorry, but it's been a hundred Sundays since I had a dollar in my wallet for more than ten minutes."

I have his old account book for the years of 1837 and 1838. Here are some of the entries:

"Balanced accounts with J. Dorothy and gave him my note for $2.15, to be paid in salts January 1, 1838. Sold ten bushels of wheat to E. Miner at 90 cents, to be paid in goods.

"Sold two sheep to Flavius Curtis and took his note for $6, payable in boots on or before March the first."

Only one entry in more than a hundred mentions money, and this was the sum of eleven cents received in balance from a neighbor.

So it will be seen that a spirit of mutual accommodation served to help us over the rough going. Mr. Grimshaw, however, demanded his pay in cash and that I find was mainly, the habit of the money-lenders.

We were poor but our poverty was not like that of these days in which I am writing. It was proud and cleanly and well-fed. We had in us the best blood of the Puritans. Our fathers had seen heroic service in the wars and we knew it.

THERE were no farmer-folk who thought more of the virtue of cleanliness. On this subject my aunt was a deep and tireless thinker. She kept a watchful eye upon us. In her view men-folks were like floors, furniture and dishes. They were in the nature of a responsibility—a tax upon women as it were. Every day she reminded me of the duty of keeping my body clean. Its members had often suffered the tyranny of the soaped hand at the side of the rain barrel. I suppose that all the waters of this world have gone up in the sky and come down again since those far days, but even now the thought of my aunt brings back the odor of soft soap and rain barrels.

She did her best, also, to keep our minds in a cleanly state of preservation—a work in which the teacher rendered important service. He was a young man from Canton.

One day when I had been kept after hours for swearing in a fight and then denying it, he told me that there was no reason why I shouldn't be a great man if I stuck to my books and kept my heart clean. I heard with alarm that there was another part of me to be kept clean. How was it to be done?

"Well, just make up your mind that you'll never lie, whatever else you do," he said. "You can't do anything bad or mean unless you intend to cover it up with lies."

What a simple rule was this of the teacher!—and yet—well the very next thing he said was:

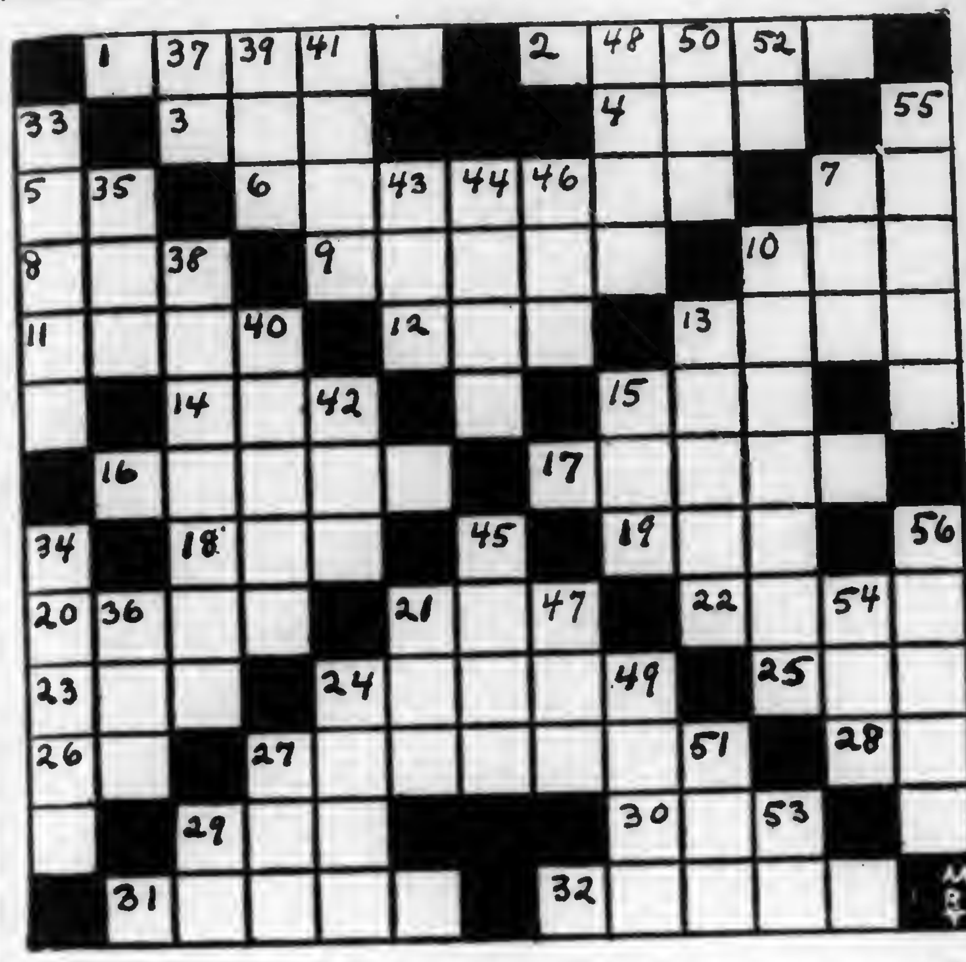
A Cross Word Puzzle for Grown-ups



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the lists given below. For example: 10 (reading across) is F A N, and 10 (reading down) is F I G H T E R. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clue to help you. The solution of this puzzle will appear in an early issue.

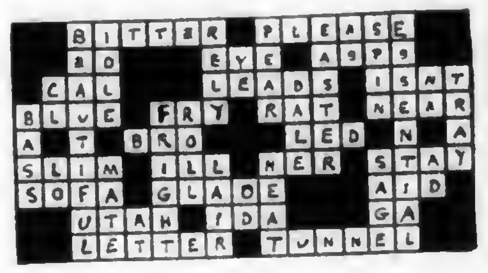
READING ACROSS

1. A long story or piece of fiction
2. Customary
3. To clear away
4. Possessive pronoun
5. A preposition
6. A communication
7. A pronoun
8. A swamp
9. The cry of a horse
10. What a baseball enthusiast is called
11. Booty
12. Consumed or devoured
13. A storage place for chopped fodder
14. A huge serpent of South America
15. Large
16. A dwelling
17. A number
18. Initials standing for degree of Doctor of Laws
19. A high explosive, abbreviation
20. is indebted to
21. A nickname for Arthur
22. One's own person
23. An armed conflict
24. Group of chicks hatched by one hen
25. An animal of the mouse family
26. For example, latin abbreviation
27. The hottest time of the year, plural
28. Personal pronoun
29. Possesses
30. To assist
31. Fitting closely
32. A form of the name of the father of Isaac

READING DOWN

A nickname for Harry
10. A combatant
Indications
A tool for boring
21. To supply with means of defence
A thick shrub
To sink in the middle
Nickname for Hiram
A flat surface furnished with
A simple vocal sound
Also
A dog's expression of pleasure
Conjunction used with "either"
38. A male turkey
39. Energy
40. Small instruments or implements
41. The garden in which our first parents were placed
42. To find the sum of two numbers
43. The ocean
44. The place where something is
45. Preposition frequently used with "away"
46. To grow old
47. One of the five digits of the foot
48. To breathe deeply and audibly
49. A yellowish gray color
50. An Indian tribe
51. A term of respect used in addressing a man
52. In like manner—for example
53. Department of Agriculture, abbreviation
54. A rule of action prescribed by the government
55. The highest of adult male singing voices
56. Frequently

LAST WEEK'S PUZZLE ANSWER



He had had bad luck fishing and on his way home he entered the butcher shop and said to the dealer:

"Just stand over there and throw me five of the biggest of those trout?"

"Throw 'em! What for?" asked the dealer in amazement.

"So I can tell the family I caught 'em. I may be a poor fisherman, but I'm no liar."—Everybody's Magazine.

Haze Lynn—Guess Si Slater's bank is 'bout ter bust.

Milt Mullen—How so?

Haze Lynn—Wal, I seen a check Bill Boyes wrote for $2. It was returned marked "No funds." Now a bank that ain't able ter cash a check fer $2 must be pretty nigh busted!

Milt Mullen—That's so, begosh!

BE AN AUTO, TRACTOR, AND ELECTRICAL EXPERT!

If you are earning less than $40 a week—read every word. Why stay in the old job, with no future—no chance of ever earning much more than you are now? The Auto, Tractor and Electrical business assures thousands of BIG-PAY JOBS—jobs where you are the BOSS. Get out of the rut—be independent—be an Auto Expert.

The Largest Operator of Auto Training Shops in the U. S. Will Train You

I am the largest operator of Auto, Tractor and Electrical training shops in the U. S.! Think a moment what it means to be trained by McSweeny—the biggest in the industry—Think of the prestige—The ease of getting a big job, when you can say, "McSweeny trained me"! That is the magic phrase that has opened the doors of big-pay jobs to the thousands of experts I have trained.

Eight Short Weeks, and Then—SUCCESS

Think of it—eight short weeks in any of my shops, then a big-pay job—success! You don't have to know anything about cars—you don't have to have any education—all you need is the determination to get ahead. In eight weeks you can be, not merely a garage mechanic, but an Auto, Tractor and Electrical Expert—a big-pay man.

Railroad Fare and Board

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I enjoy reading the Forum letters but I never saw one from the Erie County grape belt, so I am going to write for the first time.

We live on a farm of forty acres, near the Buffalo and Cleveland Highway, ten miles from Erie. For our main product we grow Concord grapes. On clear days we have a beautiful view of Lake Erie and can see the trees of Long Point, Canada.

I have a sister seven years old and in the second grade, her name is Velma. She is very fond of dollies of which she has seven, and she made pets of the most of the little chickens which mamma raised last summer. We have a yellow cat which we call Gold Brick.

We have one and three-quarters mile to go to school. We have forty-seven pupils in our school. Just now we are busy getting ready for our Christmas program at school..—Edith Randolph, Erie County, Pa.

Dear Cousin Ruth and Forum Friends:—Once upon a time there was an old grandpa bear. There was a little bear named Wrinkles and he never obeyed. So one day the old bear was taken ill. The little bear was lazy. He thought he didn't have to wash the dishes. When the old bear got better he thought it was a disgrace so he called the Gray Lady. She came to him and took Wrinkles away. She took him to a room and gave him his breakfast. She told him to wash his dishes as soon as he was finished and he could have his dinner. Then she went away.

Wrinkles didn't wash his dishes and went hungry for a week. Then he finally washed them. The Gray Lady came bringing some food. They sat down and had a fine meal. Then the Gray Lady told him he could go home on the magic carpet but he must sweep it to keep it up in the air. He swept it very hard and soon he got home. Then he always obeyed.—Marian Helen Ward, Bucks County, Pa.

ALICE HESSER Mifflin County, Pa. **VIOLA SMITH** Huntingdon Co., Pa.

Dear Cousin Ruth and Forum Friends:—You said you wanted riddles so here they are:

1. Why is D like a cross baby?
2. Why is the nose in the middle of your face?
3. A riddle, a riddle as I suppose. A hundred eyes and never a nose. What is it?

My cousin, Marie, is staying here this winter to go to school. I am the oldest of all of them. I am ten years old.

How many have written to Santa Claus yet? I have. We had to sell Christmas stamps. We had to sell ten. If we sell them we get a pin.—Donald Wilcox Molyneux, Sullivan County, Pa.

Dear Cousin Ruth and Forum Friends:—May I tell of the trip I took to Washington? I enjoyed it very much. I went to see my brother who is in the navy (hospital). I walked up the Washington Monument, which is over 500 feet high. I saw the unknown soldier's grave at Arlington, Virginia, also the Capitol and White House and I crossed three rivers on my trip.—Marian Buch, Berks County, Pa.

Dear Cousin Ruth:—We live on a farm of eighty-two acres. My father is the foreman here. There are four workmen besides father.

I have two pets, a cat and a dog. He is a very nice dog and he will not let any one hurt us children.

What do you think Santa Claus will put in your stocking this Christmas? I do want a wrist watch more than anything else.—Edith Keough, Westchester County, N. Y.

Dear Cousin Ruth and Forum Friends:—I live in the country. I do not like it in the country for the houses are so far apart and in a city you have lots of children to play with.

I am eleven years old and am ready for high school this year.

Well, I see that Cousin Ruth put a note in P. F. that she wants more riddles so here are some:

1. What game is played on a ship in a storm?
2. If a girl died eating green cucumbers what was her telephone number?
3. How is a dog like a tree?
4. What goes up and down and never touches the sky or ground?
5. What goes up the chimney down and won't go down the chimney up?—Alice Hesser, Mifflin County, Pa.

Dear Cousin Ruth and Forum Friends:—I would like to join your fun. I am eight years old and in the fourth grade. I have no brothers or sisters. I had a white Kitty, but a car ran over it and now I have only one pet. Her name is Peggy, my pony. She is not broken in yet. Last Sunday she threw me off.—Katherine Sheppard, Cumberland County, N. J.

Dear Cousin Ruth and Forum Friends:—I have been wanting to write to this page for a long time. I live along a state road about a mile from Knobsville and about five miles from McConnellsburg. I will be eight years of age on February 13th. Came very near being a valentine, didn't I? I am learning to sing some new songs. Last week was institute week. I got the institute song book and am learning some in it, too. I am very fond of music.

How many have been to Buchanan's birthplace? I was there this fall. The scenery is very pretty. I like to look at the large reservoir of water above the marker.—Pauline Larue Wible, Fulton County, Pa.

The answers to the riddles James O. Seitz gave us last week are:

1. The downfall of Turkey, the overflow of Greece, the destruction of China and the consternation of Africa.
2. A sponge.
3. A fence.

Did everybody get the right answers?

COUSIN RUTH.

Dear Forum Friends.—My father has taken P. F. for three years. I am eleven years old. I have four puppies and a nice rabbit. My father got a race horse. I like to ride him. I am trapping for foxes, they catch our chickens.

We are going to have an entertainment in our school. I got a dandy piece. I must go about four miles to school. I like to go horseback riding. The kids on the goat farm across from us are bleating all day long. Good-bye!—Elmer Siegfried, Schuylkill County, Pa.

Dear Cousin Ruth:—I am twelve years old and live on a small farm of eighteen acres. For my pets I have thirty-five bunnies and a little dog named Sporty. I am going to the Kirbyville School where we have nineteen pupils.

I have quite a way to go to school, about one and one-half mile. In the evening when I come home from school I have all the work I can do. I have a brother and a sister. My brother and father are carpenters so my sister and I do all the barn work till they come home.—Katie L. Tegely, Berks County, Pa.

You and sister certainly must have your hands full. It's fine you can help out so much.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I have a rabbit for my pet and we have a big collie dog. Once I saw a hole and told the dog to dig in the hole and he did. I reached in the back of the stone and there were eight little rabbits, all white, and I put them in a little house and now their mother has young ones again. Last Saturday I found three others. I have another mother rabbit. Two died but the black and white one is still living.

I hope you have as much fun as we do at school. We go sliding every dinner hour at school and the boys go skating. I have a brother thirteen years old.—Elizabeth Anna Wagner, Bucks County, Pa.

MOTHER AND FATHER
Sarah E. Scheetcompf, Washington Co., Md.

Dear Cousin Ruth and Forum Friends:—I am eleven years old and go to Wolffs School. I am in the sixth grade. We are going to have a Christmas entertainment, also a Santa Claus.

For pets I have two cats and a dog. The dog's name is Shep and the cats' names are Bobby and Spotie. I am sending some riddles along.

1. What is it that has three feet and no legs?
2. What has eyes and skin and cannot see?
3. What is it a man has that he doesn't want, but when he gets it he wouldn't take a thousand dollars for it?
4. Why is a leaf of tree like the human body?
5. How many sides are there to a tree?—Helen A. Craig, Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading the Y. P. F. for nearly four years and I enjoy it. I have five sisters and two brothers. I am going to send in a recipe for orange salad. Yum, yum; it's good.

ORANGE SALAD

3 large oranges
¼ cup finely chopped nuts
¼ cup chopped dates
Tiny pinch of salt
Lettuce
French dressing

Peel oranges and separate into sections. Remove skin from each section. Allow one-half orange for each serving. Arrange sections on lettuce, sprinkle with dates and nuts and a very little salt. Pour over French dressing and serve. Chill the lettuce and oranges before mixing the salad.—Erma A. Whiting, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—Christmas has already passed by, and I am almost sure everybody was waiting for a brimful Christmas stocking, and I also hope everybody did get a stocking that was helpful. I surely did.—Lillian Lang, Bucks County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—A word of twelve letters is made up of the letters forming the words you see in this puzzle. It is a word you all know, and you probably think it describes the folks who do not agree with you—I hope you won't think it describes me when I ask you to solve the puzzle. If you look carefully at the words in the picture, you will see that certain ones contain the same letter twice; that shows that the word you are hunting contains that letter twice. A good way to go about solving this would be, after you have found out what the twelve letters are, to write each of them on a separate slip of paper and keep arranging them until you find the word which uses them all. It ought not to be unreasonably difficult. When you have found the answer send it to me on a POSTAL CARD not later than January 17. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 259-263 SOUTH THIRD STREET, PHILADELPHIA.

Mole Beans As Ornamentals

If You Like Them Now's the Time to Start Them

THRU the mellow sunset of a late September day a big motor crunched up our driveway and stopped. A gay party tumbled out, their pleased eyes riveted upon the quaint beauty of oddly attractive "trees" beyond the veranda.

"Whatever are they?" they asked, crossing to the broad, richly colored plants that cast fantastic shadows upon the grass.

"Mole beans," we replied.

"Mole beans! Never even heard of them. Tell us about them—how do they grow?" The man advance guard was still in advance, enthusiastically, with questions now.

How They Grow

"From seeds. Look, there at your feet—their matured pods pop out, spilling seed thus. They're sure to grow, too."

While he was on his knees searching out every seed possible we continued.

"We plant them very early—January or February—indoors; transplanting wherever we want them—

along the porch, driveway, anywhere—after frosts are out of the way. They're fine for disguising objectionable fences, dilapidated buildings, ugly views.

"Have the soil well prepared, setting them rather deep, firming the earth compactly about them. Protect the young plants a few days, and if the season be dry, give frequent generous waterings, cultivating occasionally if possible. They're sure to grow tall, symmetrical and clean in any garden soil. Ours never had a pest enemy—frost alone kills them, at one fell stroke."

A Bit of Tropic Beauty

"They certainly are attractive all right." He stood up, showing his wife a handful of smooth, motley, gray-brown bean-like seeds.

"Next year our place shall glow with them, too. I like them, they are so tropical like. These big palm-like leaves are really majestic."

"Yes. Some of our particularly choice plants grew ten feet high with leaves that measured three feet across. They enjoyed most favorable conditions, however, all season long," we told him as he still stood admiring them—as if to him, too, they were a blessed contrast from the too often garish, flaming colored flowers he had passed along the way.—G. S.

Pin Feathers

JUST one year ago when I was helping friend husband prepare several dozen fowls for the holiday market, two of my neighbors, both poultry enthusiasts, caught me at the kitchen table, plucking pin feathers and putting on the finishing touches. One of them said, "Well, I learn a little every day!" She referred to the large pan of water within reach of my arm, into which I was dropping all the feathers and down.

It is so much easier than picking up feathers all over the house. They have such a way of getting into the corners everywhere when doors are opened and the wintry breezes get after them. Perhaps this may be a new hint to someone besides my neighbor!—G. S. S.

Thanks to Buttermilk

CHOCOLATE SPICE CAKE

½ cup butter
1 cup sugar
1 egg
2½ cups flour
3 tablespoons melted chocolate
1 cup buttermilk
1 teaspoon soda
1 teaspoon, each, of cinnamon and cloves

Mix together the butter, sugar and egg. Add the melted chocolate, then the buttermilk in which the soda has been dissolved. Add the spices and flour. Bake in a moderate oven.

* * *

GINGER COOKIES

2 cups sugar
2 cups molasses
2 cups lard
Flour to make soft dough
2 cups buttermilk
3 level teaspoons soda
1 tablespoon ginger
1 teaspoon salt

Roll out rather thin and bake quickly.—C. M. M.

Cooking Adventures

ADVENTURES in cooking. Why not? To the woman whose task it is to feed the family there are many such adventures lying in wait. I am sure one of the first requisites of a good cook is a vivid imagination. Don't laugh—for it is true.

Imagination runs on ahead and tells us just how the finished product will taste—just how the meal which we have sketched in our brain will look—why we even see the color arrangement in imagination before we begin the meal proper at all. We would not think of serving potatoes, turnips and rice at the same meal even if they did balance, because it would be such a colorless meal.

The family does notice these things even if they never mention them. One day last fall I had just made some plum preserves and they were good. We were having some with toast for our supper. Just as we finished our meal a couple of business men dropped in to see my husband and I asked them to wait just a moment and let me get them a lunch quickly, as they had a long drive ahead of them.

To Please the Eye

My small daughter began at once to help with the lunch. As she was getting the table ready, she said: "Mother, do you care if I put away this plum stuff and get some of that pretty red apple and cherry jelly? This tastes all right, but it looks so pale it isn't a bit good to look at."

What fun it is to go visiting and learn the making of new dishes. Isn't it a very real adventure to see if our product tastes as good as the dish served by the friend whose guest we are?

A sister-in-law of mine has a delicious macaroni combination that she served a year ago when I was her guest. I tried several times to duplicate it, but could not quite get the flavor. A few weeks ago I was her guest and said: "I would like some more of that macaroni combination and I would like to watch you make it." Accordingly I went with her to the kitchen and watched it in the making.

Finding Out the Mistake

I saw that I had not used enough onion in proportion to my macaroni and I had not thickened mine with flour. Macaroni, tomatoes, onions and crumbs were used in the mixture.

Isn't it an adventure to see if we can get a whole meal without a thing used from the store, everything grown on the farm? Just try it some day when you are a bit discouraged with life! I have done it and the meal was good, too. I think we enjoyed it more because every product was home grown. I will make one concession, the only non-farm product used was salt. I could not very well get around that.

How about an all vegetable meal occasionally? Of course, the men who work hard need some meat, but judging by the amount of kidney trouble found among farmers they could get along on less meat. If you use enough imagination you can serve an excellent meal mostly from your own garden.—M. H. M.

Baby Chicks

I DO indeed think that E. O. Jean ran a tremendous risk in buying chicks at the ten-cent store. Our motto with baby chicks is, "The best are none too good."

One of our very near neighbors came home in March, 1923, with 500 fluffy little chicks from the ten-cent store. They were given the best of care in splendid brooders and brooder houses, and did the owner credit all summer. But they were, no doubt, "seconds," for with the first chill winds of fall, colds, misery and death attacked the flock and in February the owner had only memories and was buying table eggs from us.—G. S. S.

WINTER SUCCOTASH

Soak a cup of dried lima beans for an hour in warm water. Cook slowly for two hours with a small piece of lean bacon, salt and pepper. Add one diced onion and cook half an hour. Just before serving add a can of whole corn. This is almost as good as that made with the fresh vegetables.

How to Be Worth While

Five Rules That Have Made a Life of Happiness

ON THE eve of my graduation from grade school (in a little red schoolhouse by the cross roads, twenty-four years ago) I heard a talk I have never forgotten.

The message was "How to Be Useful." The speaker said we must be radiantly happy to be really worth while, and he gave five helps along the way.

First, use your eyes and look at something beautiful every day—a glorious sunset, the dawn, some stretch of country. But no one needs to enumerate these for country folk, for beauty abounds if we but see it. When days are dreary, seek some master picture on your walls or among your books.

Bird Songs and Rush of Brooks

Second, let the love of the Creator reach your soul thru your ears, and listen—really listen—to something beautiful each day of your life. Here again rural folk have the advantage, for they alone are within sound of bird songs and the rush of brooks. Or perhaps some choice phonograph record, or a radio, brings beauty to your ears; or perhaps it is the cheery voice of a little child.

Third, and this requires a bit more daily effort, but it is so worth while: Memorize a gem each day; a choice little poem, a fine phrase on your calendar, a Bible verse.

Fourth, make something beautiful each day. That's a fine habit. How it thrills us to have created with our own hands a very delicious cake, an unusually fine pudding, an artistic work apron, or a new flower bed. After all, every useful thing can be beautiful, too.

And Never Forget Others

Lastly, do something for somebody every day of your life. What it is will depend upon you and your environment. It may be making a scrap book for a sick child, a glass of jelly for that old man living alone, some magazines for the hospital, a letter to some broken-hearted friend, taking flowers to a sick neighbor, making gifts for friendless children, brightening up someone in your very own home. Or perhaps seeing some way to enrich your school or Sunday school.

There really is no limit to this "lastly." Endless possibilities will arise when once you have started.

These five rules have made my life rich and happy, and I hope someone else may benefit as much as I.—G. S. S.

SAWMILLS-POWER

Farquhar Sawmills cut accurate lumber, have large capacity and are easily operated. Built in sizes to suit the power.

Farquhar Locomotive, Deep Fire Box and "Slab Burner" Rigs deliver strong, steady power. Dependable and economical. All easy steamers.

Grain Threshers, Hay Balers, Dairy Boilers, Hydraulic Cider Presses and Farm Implements.

Tremendous Value for 15c

The Pathfinder, Leading Weekly Magazine of Nation's Capital, Makes Remarkably Attractive Offer.

Washington, D. C., (Special) — People everywhere are hurrying to take advantage of the Pathfinder's wonderful offer to send that splendid illustrated review of the whole world 13 weeks on trial for 15 cents. It costs the editor a lot of money to do this, but he says it pays to invest in new friends, and in spite of the high cost of his greatly improved paper he makes this rare offer to bring his circulation up to a million a week. You will like this paper; it is 31 years old and now better than ever; no other publication like it anywhere. Try it. Only 15 cents in stamps or coin mailed at once to Pathfinder, 118 Pathfinder Bldg., Washington, D. C., will keep your whole family informed, entertained, helped and inspired.—Adv.

BUYING IN DABS

It Isn't the Right Way You'll Have to Admit

I AM fully aware that the majority of people today buy in small quantities at a loss, but so long as they continue to do so, I can see no way to cut costs for them. They themselves voluntarily boost the price. But it does seem to me entirely unnecessary for any one to buy that way. Certainly the modern home is smaller than the average home in years past, but supposing it is small and there is no ice chest or cellar, nearly everyone has a pantry or could very easily arrange one.

In my pantry, which measures a little less than 10x12 feet, there is a 9½-foot cupboard 2 feet high and 15 inches deep with three doors. Above the cupboard are seven shelves 9½ feet by 15 inches. Before the window is a broad shelf about 30 inches high, 4 feet long and 20 inches wide. On the opposite side is a built-in cabinet with a working surface about 6 feet long by 14 inches wide and 30 inches high.

Lots of Room

Below this, and extending a foot farther back, is a storage space at each end, 26 by 26 inches, supposed to have a capacity of 1 barrel each—one for flour and one for meal and other articles. Between the two are four roomy drawers, the top one divided into six compartments for silverware and other things, and the three others just right for table linen, towels, etc.

Above and back of the working surface is a china closet 6 feet long, containing 3 shelves 12 inches deep. In the remaining corner is a canned fruit cupboard with a capacity of upwards of 400 quarts.

Very Little Can't Be Canned

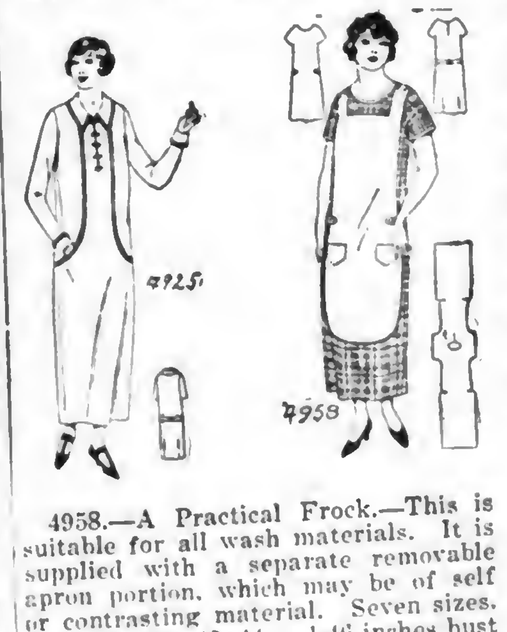
Thus it will be seen that within a comparatively small space I could store more supplies than most of us can afford to buy. There is hardly a perishable farm product except milk and butter that cannot be easily and successfully canned, so why buy by the nickel's worth? I can't can eggs, but everyone who cares to do so, preserves them in some way.

A friend of mine has in her cellar rows and rows of canned chicken, beef, pork, veal, etc. Another friend cans a year's supply of wild chicken and woodchuck every season. All these are delicious and the price is a far cry from that of stuff bought by the slice.—Mrs. E. M. Anderson.

Styles That Please the Owners

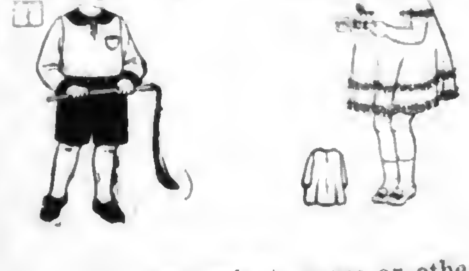
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

4925.—A Stylish Dress.—Crepe, alpaca or linen and other wash fabrics may be used for this design. The front has inserted pocket sections. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 yards of 40-inch material if made with long sleeves. If with short sleeves 3⅝ yards will be required. Pattern, 10 cents.



4958.—A Practical Frock.—This is suitable for all wash materials. It is supplied with a separate removable apron portion, which may be of self or contrasting material. Seven sizes, 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3¼ yards of 36-inch check or plaid material, with 1¼ yard of plain material for the apron if made as illustrated. If frock and apron are made of one material 4½ yards will be required. Pattern, 10 cents.

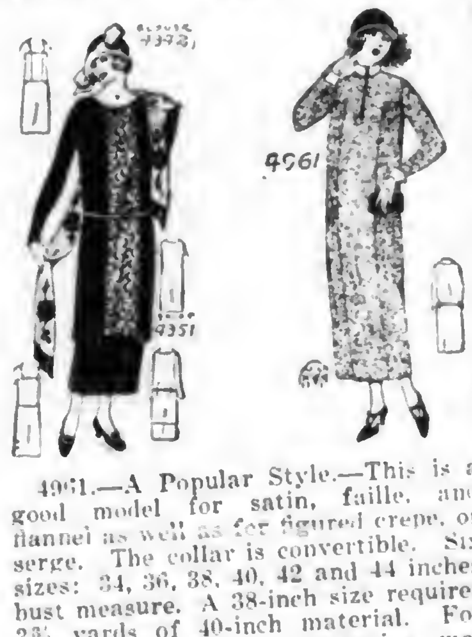
4946.—For the Small Boy.—Linen, cambric, or flannel may be used for



the blouse, and velvet, serge or other woolen for the trousers; or the entire suit may be of one material. Four sizes: 3, 4, 5 and 6 years. A 4-year size will require 1¼ yard of 36-inch material for the blouse and one yard for the trousers. If made of one material with long sleeves 2¼ yards are required; with short sleeves 2⅛ yards are required. Collar and cuffs of contrasting material require three-eighths yard. Pattern, 10 cents.

4945.—A Dainty Dress.—Crepe de chine, or chiffon voile would be very pretty for this style. It could be in white or in the pastel shades. Frills of the material or lace may serve as trimming. Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 1⅝ yard of 36-inch material. Pattern, 10 cents.

4942-4951.—An Afternoon Gown.—Velvet or satin, with contrasting material, or embroidery for the vest, would be very suitable for this model. Pattern 4951 is in 4 sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. Blouse 4942 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. To make as illustrated will require 5½ yards of 40-inch satin and a strip of 40-inch embroidery or contrasting material for the panel 10 inches wide. With short sleeves 5¼ yards will be required. Two separate patterns, 10 cents each.



4961.—A Popular Style.—This is a good model for satin, faille, and flannel as well as for figured crepe, or serge. The collar is convertible. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3¾ yards of 40-inch material. For collar and cuffs of contrasting material one-fourth yard is required. The width at the foot is 1½ yards. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1924-1925 Book of Fashions.

This Year SOW SALZER SEEDS

This 138 Page CATALOG Saves You Money

The Wonder Seed Book - a book you should have, whether you buy only 10c, or $100 worth of seeds. Packed with information on buying, planting and growing. Full of pictures, many in colors. QUALITY PAINTS

Save the surface and you save all

write for color chart showing combinations for house and barn painting

AND then after you get the chart and decide on the combination you are going to have, be *sure* you, or your painter, use Felton-Sibley Paints and not some just "as good as" brand.

Remember that Felton-Sibley reputation has been built entirely on quality—in other words, thousands of satisfied users year after year. Felton-Sibley Ready Mixed Paints are economical to use because they will give you unusual coverage and unusual long life.

You'll find that the dealer who carries Felton-Sibley Products is a good man to know.

An Evening Full of Fun

Novel Games in a Novel Spot for a Farm Party

THIS party was given on the upper floor of a large dairy barn. The guests were all the farm families with children of assorted ages and the single help and their "girls."

The main plan of the party was this: Each person was given a tally card on which a cow's head was pasted to add a decorative and "farmy" touch. The card was divided into five spaces with the numbers five, ten, fifteen, twenty and twenty-five respectively at the top of each space. Each game counted so many points and at the end of a game the tally cards were punched. At the end of the evening all points were counted and two prizes given.

The Fun Begins

As the guests arrived a slip of paper bearing the name of some animal was pinned on each one's back. Farm animal names were used as long as they held out. Other people made remarks about the animal and when its name was guessed the person was allowed to pin the name in front.

The next game was throwing jar rubbers over a short pole. Each rubber that went over counted five. If a person succeeded in ringing the pole three times a hole was punched in the fifteen space on his card.

Next came the old familiar Donkey Party game. For the five persons getting the tail nearest the right place ten points each were allowed.

Beans were carried on a knife after that. Each one was allowed to get a knife full of beans and had to run with them to a given goal. For each bean on the knife when he arrived, five points were given.

Ten small bags full of cloves, tea, ginger, nutmeg, etc., were hung around the room. People were allowed to smell of these but not to feel them. Each person guessing all ten was given twenty-five points, next twenty and last fifteen. It sounds easier than it is.

Large advertisements were cut out of farm papers to be guessed. Some phonograph records were started, the titles of which were to be guessed.

Home made ice cream, candies and cookies with painted faces scored a great success. Large, round, white frosted cookies were purchased. A paint brush was boiled and some bitter chocolate melted in a double boiler. Funny faces were painted in chocolate on the white cookies.

A party of this kind may be held anywhere, incurs a minimum of expense and a maximum of fun.—Mrs. E. M. Clark.

Putting Toys to Work

MANY of the children's playthings are real helps to mother. There is the small egg beater, so useful for beating one egg in a cup. A small washboard comes in handy for washing small articles that must be done separately. The children's cart draws the clothes-basket and pins when clothes are being hung up or taken down. It also carries earth for flowers or vegetables from the garden.

Toy tea sets and other dishes are a real convenience for the invalid's tray. Toy baking dishes may be used for "saucer pies" from left-over crusts, or for remnants of brown bread mixture. Children especially enjoy things baked in their dishes.

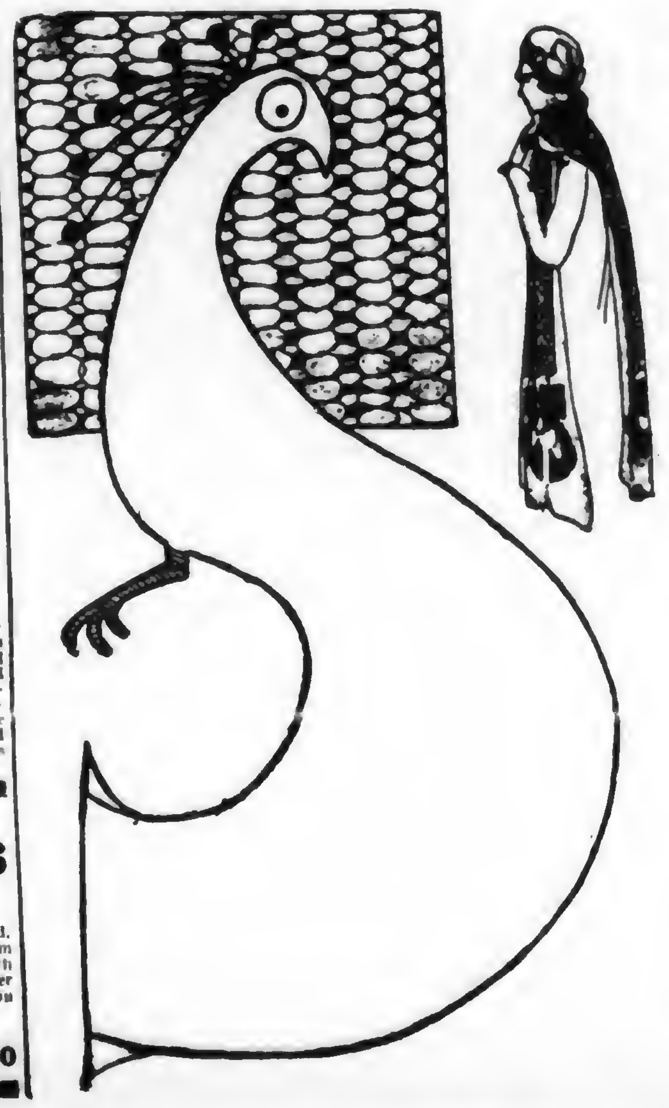
Just a Loan, of Course

The tiny pancake turner is sometimes much more convenient than the regulation one. The toy flatiron is fine for places hard to reach with a large one, such as the sleeves of baby dresses.

A slate and pencil is a help in the kitchen, for the lists of groceries and other household needs. It is also useful to hang outside the door, so that chance callers may write a message if they find you gone away.

And children are so proud to lend you any of their cherished possessions, if only it is well understood that it is a loan, and that the property will be returned to its owners.—Mrs. E. M. C.

A Colorful Scarf Lends Charm



THE scarf here shown is hand made. Any brilliant printed crepe may be used for the center and four-inch applique squares back of the birds. Match some light color that is in the print for the plain border and wide, plain ends.

The birds are cut from another darker, plain color, twice as large as the pattern given here. Black is perhaps the smartest thing for the bird silhouettes.

Their feet and topknots are embroidered, while the birds proper are applique. The eyes are tiny applique circles of the border color with a black French knot.

Use two birds on the end as shown in the sketch, only see that the birds face each other. If your scarf is extra wide, a group of four would be better.

Grandmother's Teakettle

"IN MY young day," says Grandmother, "the embryo housekeeper heard more about the teakettle than she does today.

"The teakettle was considered a very important utensil. She was taught to give it painstaking care, well knowing that the neglected "ears" of her teakettle would testify against her as a good housekeeper!

"There was less hot water in our homes in those days, but, I believe, more boiling water. Fuel was cheaper and more plentiful.

"Today, a desire to keep down gas, electric or oil bills results in our compromising, too often, with hot water when boiling water is required to obtain the oldtime delicious results.

"For a perfect cup of tea we were taught to first scald the pot with plenty of boiling water. Pour this out, measure the tea into the steaming pot and pour over it the required amount of boiling water.

"For the perfect boiling of vegetables, use a small quantity of boiling water. Vegetables that have soaked out their goodness in a large quantity of cold or tepid water before reaching the boiling point are neither nourishing nor palatable.

Used in Cooking

"The old-fashioned spice cakes and cookies were not the coarse, sandy concoctions we too often meet now, but were moist, fine and delicious. The secret lies in the fact that the spices were measured into a tin cup, enough boiling water poured over to thoroly moisten, and the cup set back on the stove over gentle heat until the spices were thoroly steeped and blended.

"If water is used in cooking meat it should be boiling so as to retard the flow of the meat juices.

"Corn bread used to be a common item of diet. Oldtime cooks used to measure the meal into a bowl and pour over it enough boiling water to moisten thoroly. Cool and use in making the usual corn bread or Johnnycake. It will be light, moist and exceedingly good."—Alice Margaret Ashton.

A Household Pest

INSECTS which damage silk upholstering about the household can be easily gassed, according to T. L. Guyton, chief entomologist, State Bureau of Plant Industry.

Among the worst of these pests are the larvae of the cigarette beetle, so named because the worm feeds for the most part on dry tobacco. Entomologists have found that under conditions of artificial heat, this beetle multiplies quite rapidly and may do considerable damage to upholstering before it is discovered.

The entomologists have the following to recommend as control measures; probably the best method of control, especially when the creature is found in the upholstering of furniture, is to fumigate the pieces of furniture with fumes of sulphur. A small tight room should be chosen as a chamber in which to do the fumigating. The sulphur should be burned at the rate of one pound to each one thousand cubic feet of space. The pieces to be fumigated should be quite dry since the fumes of sulphur in the presence of moisture will bleach fabric. Sulphur fumes will also tarnish metal and care must be taken to guard against damage in this way by coating metals with vaselene if they cannot be removed.

The sulphur treatment is also effective in eradicating other household pests such as bed bugs, moths and fleas.

Long Life means lowest cost

"Good equipment makes a good farmer better"

Buried in a Cloud of Dust for Days

Yet the cut steel, case hardened transmission gears of the Light-Weight OilPull are in no danger

Dust—dirt—sand—grit—those vipers that gnaw at gears—that steal away power—that wear out bearings—that hasten depreciation and add many dollars to upkeep—are powerless to hurt the *Light-Weight* OilPull Tractor. You can operate it in a cloud of dust day after day without fear of damage. For in this OilPull all operating parts are enclosed—all transmission gears are machine cut, case hardened steel, and operate in *dust-tight cases*, in baths of clean oil. By such construction *friction* is robbed of its teeth—*power* is increased—*life* of service is lengthened—and *cost* is reduced.

All Gears Enclosed

The Light-Weight OilPull

In the *Light-Weight* OilPulls all the basic OilPull principles—Triple Heat Control—Oil Cooling—Dual Lubrication—long-life construction—fuel economy—low upkeep—are retained.

The design is light—low—compact. Yet, because of such important features as *Ball Bearing Transmission*—a patented *Drivewheel Interlock*—complete enclosure of all operating parts—enclosed gears running in oil baths—unusual carburetor design, and many others, this *Light-Weight* OilPull actually delivers *more power* at drawbar and belt.

Mail Coupon for Free Catalog

Every man interested in modern farm power equipment should know about this *Light-Weight* OilPull—one of the outstanding successes in the quality field.

Our new catalog shows all the features—explains everything—contains many illustrations. *Just mail the coupon. Get all the facts.* Know what your tractor investment should secure for you. Address Dept. A.Y.

NEW LAMP BURNS 94% AIR
Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, J. O. Johnson, 642 N. Broad St., Philadelphia, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Chillblains

You will be surprised how quickly Corona healing ointment soothes and heals chillblains, chapped hands, cuts, sores, burns, scalds, any flesh wound on man or beast. Takes out the soreness and heals without blistering or smarting. A time-tested remedy for household and farm. Send today for a big Corona Sample only 10c. Regular size at drug stores or by mail 65c post paid.
Corona Manufacturing Co.
Box 40 Kenton, Ohio (5)

HOW TO START HENS LAYING

Here's a New Way to Get Eggs in Winter, Costs Nothing to Try.

A letter from Miss Dama Wright, Veronica, Ore., has a real idea for chicken raisers who are not getting plenty of eggs. She says:

"Late in October, our fifteen hens were not laying at all. I started giving them Don Sung and for ten days they still didn't lay. But on the eleventh day, they laid thirteen eggs, and it is wonderful what Don Sung has done for our egg basket."

Don Sung, the Chinese egg laying tablets which Miss Wright used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the Burrell-Dugger Co., 838 Allen Street, Indianapolis, Ind. Poultry raisers whose hens are not laying well, should send 50 cents for a trial package (or $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded, so it costs nothing to try. Right now is the time to start giving Don Sung to your hens, so you will have a good supply of fresh eggs all winter.

Own a Flour Mill

and make money milling the highest grade roller flour in your community on the wonderful, one-man, self-contained "Midget Marvel" Roller Flour Mill. No milling experience necessary. Oats—No 2 white, 68@69c; No 3 white, 66@67c.

PHILADELPHIA MARKETS

January 5, 1925.

LIVESTOCK

Receipts for week ending January 3:

	Beef cattle.	Sheep and lambs.	Hogs.
Totals for week.....	1780	5223	9750
Previous week	1893	2911	10130

Calves, 2131; previous week, 1000.

Beef Cattle—Receipts lighter and market firm with some choice steers commanding a premium. Steers, fair to good, $8@9.75; some choice stock higher; common to fair, $6@8; cows, good to choice, $5@6; fair to good, $4@5; ordinary to fair, $3@4; cows, bologna, $1.50@3; bulls, fair to choice, $5@6.25; common to fair, $4@5; calves, choice, $18@18.50; fair to good, $16@17; common, $12@13.50; Tennessee, choice, $14@15; fair to good, $10@12; common, $7@8.

Sheep and Lambs—The better grades well cleaned up and firm. Sheep, wethers, extra, $10@10.50; fair to good, $7.50@8.50; common, $3@5; ewes, heavy, fat, $7@8; lambs, handy weight, choice, $18.75@19; fair to good, $16.50@18; common, $13.50@15.50; heavy lambs, $13@15.

Hogs in fair demand and firm. Western, best, $11.75@12; nearby, handy weights $11@11.50.

City Dressed Stock in fair request and values well sustained under moderate offerings. Steers, $16@18; heifers, $13@17; cows, $9@12; yearlings, top, $22@24; yearlings, good, $18@20; calves, city dressed, $25; country dressed, $20@22; sheep, $15@18; spring lambs, $30@32; winter lambs, $25@27; hogs, $16.75.

HAY AND GRAIN

Baled Hay and Straw—Hay, timothy, No 1, nominal; No 2, $19@20; No 3, $18@19; light clover mixed, No 1, $19@20; No 2, $17@18; straw, No 1 straight rye, $15.75@16; No 2, $14@15; wheat straw, $15@16; oat straw, $15@16.

Bran—Car lots, including sacks, ton: Western spring bran, $39.50@40.

Wheat—Car lots in export elevator: No 2 red winter, $1.87@1.88; No 3, $1.84@1.85; No 4, $1.82@1.83; No 5, $1.79@1.80; No 2 red winter, garlicky, $1.84@1.85; No 3, $1.81@1.82; No 4, $1.79@1.80; No 5, $1.76@1.77. Mixed wheat 3c under red winter.

Corn—Car lots for local trade: No 2 yellow, $1.44@1.45; No 3, $1.39@1.40.

Oats—Car lots, as to location: No 2 white, 72@72½c; No 3 white, 69½@70½c.

DAIRY MARKET

Butter—Receipts, 903 tubs. Solid-packed creamery, in tubs, extras, 92 score, 45½c; higher-scoring goods, 46½@49½c, the latter for small lots; 91 score, 45c; 90 score, 42½c; 89 score, 40c; 88 score, 38c; 87 score, 37c; 86 score, 36c; ladle packed, 26@28c; packing stock, 25@27c; best prints, 92@94 score, 48@50c; cartons, 49@51c; good prints, 89@91 score, 43@47c; cartons, 44@48c; ordinary farmers' prints, 37@42c.

According to the U. S. Bureau of Agricultural Economics, the market was easier with an unsettled undertone. A little trading was reported in extras and 90-score butter at listed prices. In most houses dealers were free sellers, but demand was limited and buyers were critical of quality.

Cheese firmly held. New York, whole milk, flats, fresh, 22½@23c; held, 23½@24½c; longhorns, 23½@24c; daisies, 23½@24c.

LANCASTER MARKETS

January 5, 1925.

PRODUCE

The snow storm of last Friday so blocked all rural highways and roads leading into this city that the regular weekly market was very poorly attended. The scarcity of produce because of the inability of the majority of farmers to reach town with their wares, however, did not have the expected tendency to add a premium to available supplies.

Butter and Eggs—Country butter, 55@65c lb; creamery butter, 53@60c lb; fresh eggs, 75c doz.

Dressed Poultry—Chickens, 75c@$2.25 ea; ducks, $1.50@2.50 ea; squabs, 35@50c ea.

Vegetables—Beans, 15@20c qt; Brussels sprouts, 20c qt; carrots, 5c bch; beets, 5c qt; cauliflower, 20@45c ea; celery, 10@20c stalk; eggplants, 15@50c ea; onions, 10c qt; lettuce, 15@25c hd; parsley, 2@5c bch; parsnips, 10c qt; peppers, 5c ea; potatoes, 20c ¼ pk; pumpkins, 15@25c ea; peas, 25@30c qt; spinach, 13@20c ¼ pk; sweet potatoes, 25@30c ¼ pk; dried corn, 40c qt.

Fruits—Apples, 15@20c ¼ pk.

Grains (prices paid to farmers—Wheat, $1.75; corn, old, $1.25; hay, baled, timothy, $16@18 ton; straw, $14 ton.

Feeds (selling prices)—Bran, $44@45 ton; shorts, $45@46 ton; hominy, $60@61 ton; middlings, $52@53 ton; linseed, $56.50@57.50 ton; gluten, $52@53 ton; ground oats, $52@53 ton; cottonseed, 41 per cent protein, $53@54 ton; dairy feeds, 16 per cent, $41.50@42.50; 18 per cent, $45@46 ton; 20 per cent, $47.50@48.50 ton; 24 per cent, $54@55 ton; 25 per cent, $55@56 ton; horse feed, 85 per cent, $56.50@57.50 ton.

LIVESTOCK

Review at local yards for week ending January 3: Market inactive compared with a week ago; beef steers steady; top, $9.40; average weight, 1340 lbs. Bulk of sales, $8@8.75. Cows showing slightly weaker tendency. Other killing stock steady. Stockers and feeders practically off the market. Calves, steady; top, $15. Hogs showing steady tendency. No early sales. Receipts, 24 cars: 12 Chicago, 5 Penna, 3 St Louis, 1 Indiana, 2 Tennessee, 1 Virginia, 591 cattle, 94 hogs, 2 calves.

Toledo, Ohio, January 3, 1925.

Cloverseed, cash, old, $19.50; new and January, $19.75; February and March, $19.90. Alsike, cash, old, $13.10; new and January, $13.25; March, $13.50. Timothy-seed, cash and January, $3.35; March, $3.45.

Market Summary

THE egg market in Philadelphia on Friday was firm with supplies cleaning up well. Nearby extra firsts sold at 62@63c, firsts 59c, and seconds at 43@49c. Live poultry was firm with buyers operating cautiously on account of the poultry epidemic. Prices on most grades were unchanged with ducks selling at 40@50c per pound. The egg market in New York Friday was firm. Extra fancy hennery whites were quoted at 69@70c per dozen, with brown extras 66@68c. The poultry market was firm with the demand active. Leghorn fowl of average run sold at 18@24c with broilers bringing 45@50c.

Fruits and Vegetables

Fresh receipts of nearby produce were light on the Philadelphia market Friday morning. The demand and trading were somewhat limited on account of the weather. Sweet potatoes were in moderate supply and slightly weaker. Apples held firm, while most root crops showed a stronger tone. Offerings of most lines were moderate on the carlot market. Apples were about steady for fancy stock. There was one car of Pennsylvania apples from Adams County that sold at $6.50 per barrel.

Cold Weather Affects Potato Market

The potato markets in the East, with the exception of Philadelphia, were very dull on Friday on account of the stormy weather. The price for Pennsylvania round whites in these markets ranged from $2.25 to $2.30 per sack. The carlot shipments for Tuesday, Wednesday and Thursday totaled 1494 cars, of which number Maine rolled 448 cars, Minnesota 125 and Pennsylvania 26.—W. R. W.

Tobacco Production

PRODUCTION of all types of tobacco grown in the United States was smaller this year than in 1923, reports the United States Department of Agriculture. The total crop was 1,243,000,000 pounds as compared with 1,515,000,000 pounds in 1923. The cigar types show a cut of 24,000,000 pounds, and the types used for chewing, smoking, snuff, and export show a reduction of 248,000,000 pounds.

The reduced production is attributed to decreased plantings in practically all the important tobacco growing sections, and by decreased yields in many areas. The biggest decrease was in the Bright or flue-cured tobacco portions of Virginia and the Carolinas, where production of what are known as the Old Belt and New Belt types was 441,000,000 pounds or 152,000,000 pounds less than last year.

Of these two flue-cured types, the New Belt type showed the heaviest decline, production being placed at about 220,000,000 pounds as compared with 320,000,000 pounds last year. The department points out, however, that sales data in South Carolina are as yet incomplete and the production figures in that state may be raised several million pounds.

Production of Burley, which is the most important single type of tobacco, was 311,000,000 pounds or 15,778,000 pounds less than last year.

Total production of types used for cigars was 169,641,000 pounds as compared with 194,124,000 pounds in 1923. Production in the Connecticut Valley was 4,332,000 pounds less than last year. Pennsylvania shows an increase of approximately 1,000,000 pounds, and Wisconsin a decrease of 11,432,000 pounds.

County News and Comment

BLAIR COUNTY, PA.—We are having exceptionally cold weather. The temperature has reached zero twice in the last month and the ground is frozen to a considerable depth. There is no snow to amount to anything yet, at present the ground is bare. There has been very little rain this fall and the streams are low and the smaller ones are frozen nearly solid. Quite a lot of fall plowing was done and at present the farmers are hauling manure, getting in wood and doing odd jobs about their homes. Schools of all kinds have been interrupted by an epidemic of mumps among the children. On December 24 we had a light rain that froze on the ground as it fell, coating everything with ice and causing many automobile wrecks. In some sections there was snow instead of rain. Wheat is selling for $1.55@1.65; eggs are scarce and bring 55@65c. Prices of most produce have not changed much since early fall.—H. E. H., Dec. 31.

MONTGOMERY COUNTY, PA.—We are having excellent winter weather, no snow at present altho there was a few inches in the middle of the month. The frequent rains have replenished the water supply but they came too late to help the wheat much and make ground fit to plow. There is not much plowing done but most farmers have the manure hauled out. Many farmers who are not so busy have gone to work in the shops of the neighboring towns. The Montgomery County Farm Products Show, held in Norristown the first week of the month was very successful. The exhibits numbered about the same and the quality was just as good in spite of the complaints of poor crops. A milk exhibit created much interest and competition. An added attraction was entertainments provided on two of the evening sessions. The annual meeting of the Farm Bureau will be held in the Court House in Norristown January 6. Prices: wheat, $1.60; oats, 75c; bran, $2.10; gluten, $2.45; oil meal, $3; dressed hogs, 12@14c; calves, 12c; chickens, 25@28c; eggs, 70c; butter, 55c.—C. N. D., Dec. 30.

SUSQUEHANNA COUNTY, PA.—The past month has been unusually cold so that some farmers lost heavily on apples, potatoes and cabbage that was not carefully housed. One man lost $1500 worth of apples alone, while some whole crops of cabbage were ruined. The Evans milk plant, at Lynn, has just been taken over by the Dairymen's League, who purchased the entire business of the W. M. Evans Dairy Company, January 1, which includes twelve fluid shipping stations, and 226 routes in Brooklyn and Queens. The water supply is low. Creamery men are filling ice houses. Farmers are working at ice jobs, baling hay, getting feed ground at grist mills, cutting wood and hauling mine props. They are getting 55c for eggs; selling some potatoes for 50c bu.; apples, 75c. Some dairymen's meetings have already been held, more are listed for this month. Dairymen not satisfied with the milk situation. Community affairs are numerous. Schools thriving. Many county debates are being enjoyed. Two parent-teacher associations holding worth while and instructive meetings. No poultry plague, as yet, in this county. E. M. L. B., Jan. 1.

WARREN COUNTY, PA.—Winter is set in with the coldest weather in December that has been known in years, the thermometer registering from zero to twenty below and continuing to do so for a period of [illegible] days. Many fires reported. Cellars freezing. Meadows have been covered with snow, so no serious damage to next year's hay crop. Hunting season closed. Ideal hunting weather entire period. More bear and deer taken than any previous year. Rabbits and pheasants not as plentiful as usual. Farmers not able to do much, but get wood, due to extreme cold. Grange meetings, conventions and revival meetings are about the only events of interest during the next two months. Poultry doing well, selling for 25c lb.; eggs, 65c doz.; butter, 50c lb.; veal, 16c lb.; beef, 12c; potatoes, 75@90c bu.; apples, $1.50 bu., but moving slowly.—H. C. J., Jan 2.

Feed Prices

THE quotations are for transit and nearby shipments, Friday, January 2, 1925, according to the Pennsylvania Bureau of Markets, the United States Bureau of Agricultural Economics and the New Jersey Bureau of Markets, co-operating. The following quotations show the approximate cost of feed per ton (all in 100-lb. sacks) and grain per bushel in carlots, sight draft basis, delivered on track at Philadelphia and Scranton rate points.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York-Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury-Bridgeton rate points, add $1.00 per ton; for Freehold-Toms River-Cape May points add $1.40 per ton.

National Co-op Meeting

FARMERS' co-operative marketing associations doing an annual business of nearly a billion dollars, will hold their third annual convention in Washington, January 5 to 8. About 500 accredited delegates and observers will represent agricultural selling groups scattered from Maine to California, according to officers of the National Council of Farmers Co-operative Marketing Associations.

Chief among the subjects to be considered is federal legislation. The executive committee, which includes such public figures as ex-Governor Frank O. Lowden, of Illinois, and Judge R. W. Bingham, of Louisville, has already gone on record as vigorously opposed to further federal aid to co-operatives. It is freely predicted that the convention will go one step further by condemning every one of the bills now in Congress which aim to establish a federal system of co-operative marketing.

The Year's Truck Crops

NINETEEN truck crops produced in the United States this year for table use, canning, and manufacture had a gross value to the growers of $313,000,000, according to estimates by the United States Department of Agriculture. This is $12,000,000 less than in 1923, but $22,000,000 more than in 1922, and $78,000,000 more than in 1921.

There has been a rapid expansion in truck crop production, transportation, and marketing in recent years, as indicated in acreage figures. The acreage devoted to the nineteen crops this year was 2,302,000 acres, which is a sixty per cent increase over the acreage in 1921.

Canning Acreage Doubled

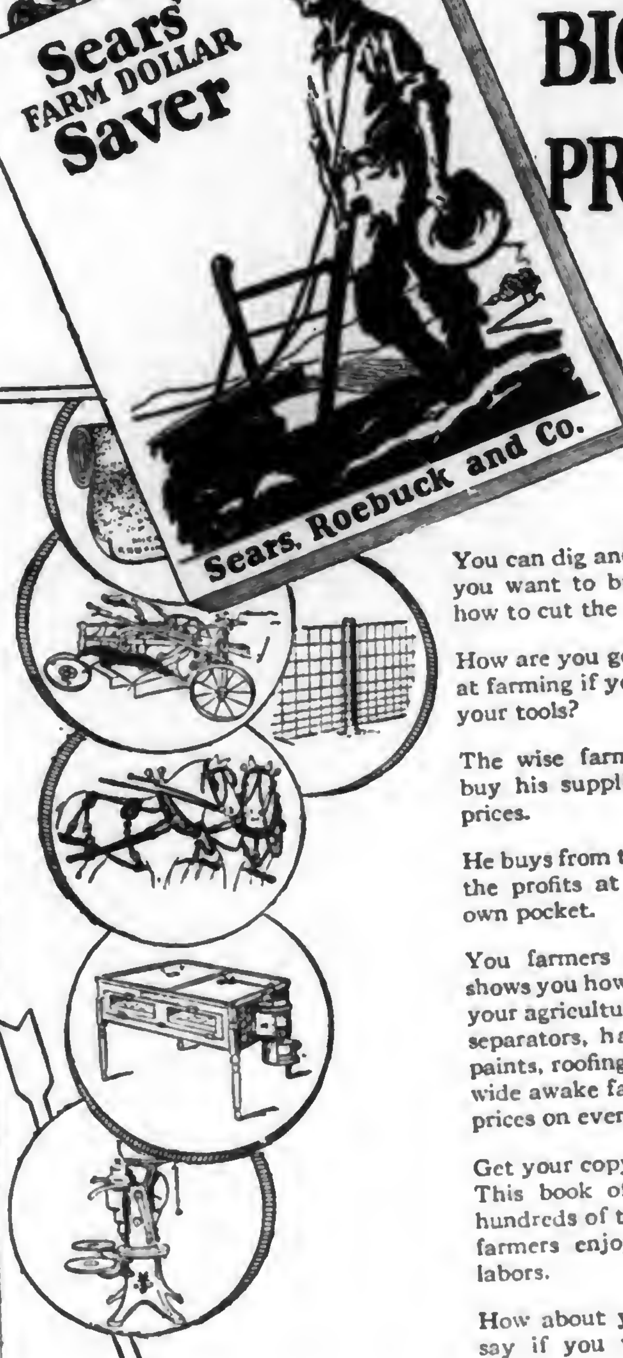
Production of eighteen crops grown wholly or partly for table use direct was on 1,309,000 acres and had a value of $262,000,000. The quantity produced wholly or partly for canning or manufacture was grown on 993,000 acres and had a value of $51,000,000. The canning acreage has been more than doubled since 1921, and the table acreage has been increased one-third.

Tomatoes were first in gross value, showing a total of $55,000,000; early Irish potatoes are valued at $44,000,000; strawberries, $35,000,000 and cantaloupes $20,000,000. Green peas, onions, lettuce, celery, cabbage, and asparagus each come in the $15,000,000 to $17,000,000 range; cucumbers, snap beans and watermelons ranged from $8,500,000 to $12,000,000 each, and sweet corn for canning, spinach, peppers, cauliflower, and carrots from $3,600,000 to $7,100,000 each. The value of eggplants was $1,030,000.

Tomato Led All Truck Crops

Tomatoes had the largest acreage at 470,000 acres; early Irish potatoes 308,000 acres; sweet corn for canning 299,000 acres; green peas 242,000 acres; watermelons 168,000 acres; strawberries 147,000 acres; cucumbers 130,000 acres. These figures do not include market gardens. Ninety-one per cent of the acreage of green peas was for canning; canning and manufacture of cucumbers took 72 per cent of the acreage; tomatoes 67 per cent; asparagus 47 per cent; spinach 29 per cent; string beans 27 per cent, and cabbage for kraut 14 per cent.

Better Equipment means BIGGER PROFITS for You



You can dig and slave and work all you want to but — Do you know how to cut the corners on expense?

How are you going to make money at farming if you pay too much for your tools?

The wise farmer knows where to buy his supplies at money saving prices.

He buys from the Factory and keeps the profits at home — right in his own pocket.

You farmers need this book. It shows you how to save money on all your agricultural implements, cream separators, harness, hardware, paints, roofing, etc., in fact, it's the wide awake farmer's guide to lower prices on everything he needs.

Get your copy today. Don't delay. This book of 92 pages is helping hundreds of thousands of American farmers enjoy the fruits of their labors.

How about you? It is for you to say if you want to save money.

Corn Silage, Hay and—?

For Dairymen who have silage and hay to feed there is no grain ration that will form as well balanced a ration for dairy cows as

Red Brand Ti-o-ga Dairy Feed

It is made exactly for this combination of roughage to produce milk at lowest cost and keep cows in perfect flesh. This feed is always produced and offered at lowest cost per unit of nutrition. Contains the most nutrition, perfectly proportioned to balance with this roughage.

Record cows have been fed this ration alone with wonderful results. Successful dairymen have found by experience that it is cheapest for what it produces and always dependable and uniform.

How much to feed and what roughage to feed with it is told on the tag on every bag of Ti-o-ga Dairy Feed.

Insist on getting:

Red Brand Ti-o-ga Dairy Feed to be fed with low protein succulent roughage; Silage, Pasturage, Green Fodder, etc., and small quantities of hay.

White Brand Ti-o-ga Dairy Feed to be fed with medium protein dry roughage; Timothy Hay, Mixed Hay, Corn Fodder, etc.

Blue Brand Ti-o-ga Dairy Feed to be fed with high protein dry roughage; Clover Hay, Alfalfa Hay, etc.

Write us if your dealer can't supply you.

TIOGA MILL & ELEVATOR CO., Waverly, N.Y.

RED BRAND WHITE BRAND BLUE BRAND

Use the TI-O-GA Dairy Feed which forms a balanced ration with your own roughage.

TI-O-GA FEED SERVICE

More Important than the Finest Dairy Equipment ~is the health of the Udder

DON'T overlook the udder and teats—the profit zone of your cows. Often a very slight injury will mean the loss of several dollars worth of milk. By looking carefully after the comfort of these key organs you can add many quarts of milk to the average daily yield.

Bag Balm Insures an Unobstructed Milk Flow

This famous healing ointment, clean and sanitary, has wonderful power of penetration and healing. Quickly clears up any congestion of the udder tissues, Bunches, Caked Bag, chapped teats, cuts, bruises, etc.

This big 10-ounce package costs only 60c and a little goes a long way. Sold by feed dealers, general stores and druggists. Order direct if dealer is not supplied.

Dairy Association Co., Inc., Lyndonville, Vt.

The Light in the Clearing

(Continued from page 20)

"Where did you hear all that swearing?"

How could I answer his question truthfully? I was old enough to know that the truth would disgrace my Uncle Peabody. I could not tell the truth, therefore, and I didn't. I put it all on Dug Draper, altho his swearing had long been a dim, indefinite and useless memory.

As a penalty I had to copy two maxims of Washington five times in my writing-book. In doing so I put them on the wall of my memory where I have seen them every day of my life and from which I read as I write.

"Speak no evil of the absent for it is unjust."

"Labor to keep alive in your breast that little spark of celestial fire called consience."

THE boys in the school were a big-boned lot with arms and legs like the springing bow. Full-lunged, great-throated fellows, they grew to be, calling the sheep and cattle in the land of far-reaching pastures. There was an undersized boy three years older who often picked on me and with whom I would have no peaceful commerce.

I copy from an old memorandum book a statement of my daily routine just as I put it down one of those days:

"My hardest choar is to get up after uncle calls me. I scramble down stairs and pick up my boots and socks and put them on. Then I go into the setting room and put on my jacket. I get some brand for the sheep. Then I put on my cap and mittens and go out and feed the sheep. Then I get my breakfast. Then I put on my frock, cap, mittens and fetch in my wood. Then I feed the horses their oats. Then I lay away my old clothes until night. I put on my best coat and mittens and tippet and start for school. By the time I get to Joe's my toes are cold and I stop and warm them. When I get to school I warm me at the stove. Then I go to my seat and study my reader, then I take out my arithmetic, then my spelling book, then comes the hardest study that ever landed on Plymouth Rock. It is called geography. After the spelling lesson comes noon. The teacher plays with me cos the other boys are so big. I am glad when I go home. Then I do my choars again, and hear my aunt read until bedtime."

There were girls in the school, but none like Sally. They whispered together with shy glances in our direction, as if they knew funny secrets about us, and would then break into noisy jeers. They did not interest me, and probably because I had seen the lightness and grace and beauty of Sally Dunkelberg.

There were the singing and spelling schools and the lyceums, but those nights were few and far between. Not more than four or five in the whole winter were we out of the joyful candle-light of our own home. Even then our hands were busy making lighters or splint brooms, or paring and quartering and stringing the apples or cracking butternuts while Aunt Deel read.

After the sheep came we kept only two cows. The absence of cattle was a help to the general problem of cleanliness. The sheep were out in the fields and I kept away from them for fear the rams would butt me.

I was twelve years old when I began to be the reader for our little family. Aunt Deel had long complained that she couldn't keep up with her knitting and read so much. We had not seen Mr. Wright for nearly two years, but he had sent us the novels of Sir Walter Scott and I had led them heart deep into the creed battles of Old Mortality.

Then came the evil days of 1837, when the story of our lives began to quicken its pace and excite our interest in its coming chapters. It gave us enough to think of, God knows.

Wild speculations in land and the American paper-money system had brought us into rough going. The banks of the city of New York had suspended payment of their notes. They could no longer meet their engagements. As usual, the burden fell heaviest on the poor. It was hard to get money even for black salts.

Uncle Peabody had been silent and depressed for a month or more. He had signed a note for Rodney Barnes, a cousin, long before and was afraid that he would have to pay it. I didn't know what a note was and I remember that one night, when I lay thinking about it, I decided that it must be something in the nature of horse colic. My uncle told me that a note was a trouble which attacked the brain instead of the stomach. He told me that notes had an effect on the brain like that of green apples on the stomach.

One autumn day in Canton Uncle Peabody traded three sheep and twenty bushels of wheat for a cook stove and brought it home in the big wagon. Rodney Barnes came with him to help set up the stove. He was a big giant of a man with the longest nose in the township.

I remember that I regarded it with a kind of awe because I had been forbidden to speak of it. The command invested Mr. Barnes' nose with a kind of sanctity. Indeed it became one of the treasures of my imagination.

That evening I was chiefly interested in the stove. What a joy it was to me with its damper and griddles and high oven and the shiny edge on its hearth! It rivaled, in its novelty and charm, any tin peddler's cart that ever came to our door. John Axtell and his wife, who had seen it pass their house, hurried over for a look at it. Every hand was on the stove as we tenderly carried it into the house, piece by piece, and set it up. Then they cut a hole in the upper floor and the stone chimney and fitted the pipe. How keenly we watched the building of the fire! How quickly it roared and began to heat the room!

WHEN the Axtells had gone away Aunt Deel said:

"It's grand! It is sartin—but I'm 'fraid we can't afford it—ayes I be!"

"We can't afford to freeze any longer. I made up my mind that we couldn't go thru another winter as we have," was my uncle's answer.

"How much did it cost?" she asked.

"Not much differ'nt from thirty-[illegible] dollars in sheep and grain," he answered.

Rodney Barnes stayed to supper and spent a part of the evening with us.

Like other settlers there, Mr. Barnes was a cheerful optimist. Everything looked good to him until it turned out badly. He stood over the stove with a stick of wood and made gestures with it as he told how he had come from Vermont with a team and a pair of oxen and some bedding and furniture and seven hundred dollars in money. He flung the stick of wood into the box with a loud thump as he told how he had bought his farm of Benjamin Grimshaw at a price which doubled its value.

Now and then Grimshaw (and others like him) loaned money to people, but he always had some worthless hay or a broken-down horse which you had to buy before you could get the money.

Crooked Spines Made Straight

OVER 50,000 REMARKABLE CASES

An old lady, 72 years of age, who suffered for many years and was absolutely helpless, found relief. A man who was helpless, unable to rise from his chair, was riding horseback and playing tennis within a year. A little child, paralyzed, was playing about the house after wearing a Philo Burt Appliance 3 weeks. We have successfully treated over 50,000 cases in 23 years.

30 Days' Free Trial

We will prove its value in your case. There is no reason why you should not accept our offer. The photograph shows how light, cool, elastic and easily adjusted the Philo Burt Appliance is—how different from the old torturous plaster, leather or steel jackets. Every sufferer with a weakened or deformed spine should write at once. Send for our free booklet. If you describe case it will aid us in giving you definite information at once. PHILO BURT CO., 271-1 Odd Fellows Temple, Jamestown, N.Y.

New Scales Saved Me $87.00 On One Deal Alone

That's what Mr. O. Nadeau says the RENFREW did for him; Mr. H. Van de Slunt says it saved him $5.00 a month on butter products alone; Mr. Bunde says he made $6.00 extra on 2 hogs by using the RENFREW. It will save money for you, too.

It Wheels Around. It Weighs. It Lifts.

$7.50 Down. After 30 Days FREE Trial on the RENFREW Portable Truck Scales

Don't send us a cent. Give the RENFREW a 30-Day Free Trial. See how easy it is to wheel it to the things you want to weigh. Then keep it or send it back. Only $7.50 at the end of 30 days if you keep it. Easy monthly payments for balance.

McCORMICK-DEERING 15-30 H.P.
McCORMICK-DEERING 15-30 H.P.

Bird's-eye View of the McCormick-Deering Tractor

—Just about the view the operator has as he steps up on the platform and takes the seat. One day he may be sighting along the belt to the belt machine and the next day steering across his fields.

NOTICE the clear view ahead, the handy controls. Make note of the roomy platform, the wide protective fenders, the comfortable seat, the auto-type steering, the tool box, the brakes, the removable lugs, the drawbar with its range of adjustment, the wide belt pulley and its sensible location.

Then there are the many McCormick-Deering features you cannot see here—such as the crankshaft and main ball bearings guaranteed for life, the removable cylinders, the unit main frame, the ball and roller bearings at 28 points, the throttle governor, the perfected lubrication, etc. Everything is there, on top or inside. Remember this tractor reaches the farm complete with *all* the features named above.

Note the little round plate in the center of the platform. That is where the Power Take-Off attaches—the great new feature through which you can run the mechanism of grain binders, corn pickers, etc., by power conveyed from the tractor through a revolving shaft. One of the greatest of recent tractor improvements.

Write us for full illustrated catalog about the McCormick-Deering Tractor. Use your tractor for winter belt work and be well acquainted with it by spring's work.

INTERNATIONAL HARVESTER COMPANY of America (Incorporated)

NEW RADIO FEATURE

Housewives to Learn of Market Conditions

MARKETING hints for housewives is a new feature to be presented weekly by the Pennsylvania Bureau of Markets co-operating with the United States Bureau of Agricultural Economics thru radio station WIP in Philadelphia. Talks will be given every Tuesday afternoon from 4:20 to 4.30 P. M., beginning January sixth.

The object is to acquaint housewives, particularly those living in the city, with market conditions that are of interest and importance to them. There are many times when the wholesale market is overstocked with certain commodities, and a knowledge of this should help women to buy economically, thus aiding in the general distribution of agricultural products.

Recipes Will Also Be Given

These marketing talks will be followed later in the week with talks by Mrs. Anna B. Scott thru the various broadcasting stations in Philadelphia. Mrs. Scott will give recipes for the use of the fruits or vegetables which have been advised.

As new or unusual commodities appear on the market an effort will be made to introduce them. With this service and Mrs. Scott's recipes, the housewife will be able to add a greater variety to her menu. These "hints" will also cover meats, eggs, poultry and dairy products.—W.R.W.

The native trees of Pennsylvania make two-thirds of their height growth at night and only one-third during the day. In the latitude of Pennsylvania ninety per cent of the normal height growth of trees is laid on in less than forty days in springtime.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

NERVOUSNESS — INDIGESTION.—I have a large draft horse which seems well and all right. He is fed six quarts of oats at feed when working, only three quarts when idle, he also has plenty mixed hay. I have no work for him this winter. He does not gain flesh when resting, the muscles of shoulder tremble and he perspires too freely; part of time he trembles all over. What had I better give him?—O. W., Luthersburg, Pa. Give him one dram of fluid extract of nux vomica, one dram of fluid extract of cinchona and one-half ounce of Fowler's solution at dose in either soft feed or in drinking water twice a day. Feed him some roots and exercise him daily. His stable should be well supplied with fresh air. Hand rub shoulder muscles.

INCURABLE SPAVIN.—I have, a Percheron mare twenty years old, she weighs about1150 pounds. She is sound in every way but she has spavin from hard hauling and the last couple of weeks has gotten awfully stiff. She has not been working much since it froze up. Has had this for three or four years. Is there any relief for it? I thought possibly it would be the best to take her to the woods and put her to rest, but she is so good in every other way that a person hates to do that.—V. B., Clearfield County, Pa. Doubtless you have a case of incurable spavin lameness. An animal twenty years old seldom recovers from chronic spavin lameness. If you do not care to have the mare humanely destroyed, as a last resource, have your veterinarian perform either (or both) anterior or posterior tibial neurectomies. This removal of a section of the nerve will relieve her of both pain and lameness.

IMPURE BLOOD.—We have a pair of kittens seven or eight months old, one male, the other female, the female has had two small abscesses on its back which opened and discharged pus. What can be done for this cat?—W. D. B., Embreeville, Pa. Occasionally paint bunch, if any more form, and give two drops of Donevan's solution at dose three times a day. Feed the cat some raw lean beef twice daily, also some carrots.

COW FAILS TO COME IN HEAT.—I have a young cow that has had two calves. The last one came about twelve months ago; since then she has failed to come in heat. For some time before she had her last calf she was off her feed: also was low in flesh, but she is now in fairly good condition.—A. H. C., Glen Roy, Pa. If well fed and kept warm, she will perhaps come in heat next spring. Giving her drugs will do very little good; however, you might try giving her one dram of fluid extract of nux vomica at dose in drinking water or in soft feed three times a day. Yohimbine hydrochloride is the best drug for this kind of case, but it is too expensive for cattle practice.

STRANGLES — DISTEMPER.—We have a two-year-old colt that has been coughing for the past two weeks, some mucus comes from nostrils and the glands between lower jaw is tender and swollen. What ails him? What can be done to cure him? I have three other colts and would like to know more about this sickness.—A. J. M., Glencoe, Pa. Strangles is an acute contagious febrile disease peculiar to the horse, characterized usually by the formation of an abscess in the submaxillary space. It is most common in young animals, generally attacking from two to six years of age; yet it may occur in a sucking colt, or in a horse twenty years old. After occurring once in a well marked form, it rarely attacks the same animal. Strangles, so far as the writer knows, is peculiar to the equine race, and does not attack any other species of animals. The treatment of strangles, as it ordinarily occurs, is by no means a difficult matter. Give your colt thirty grains of nitrate of potash in drinking water twice a day, clip off hair and apply camphorated oil to swelling in throat twice a day. When bunch softens, open it, then swab out abscess, using tincture of iodine. The colt should be fed soft feed, be kept in warm stable until well. Your other colts will perhaps take it, if so keep in mind that few horses escape, therefore your colts might as well have the disease now as later.

CANINE DISTEMPER.—Have collie female that has litter of pups which she is now nursing. She has corruption coming from eyes and nose and I would like to know what can be done for her.—A. F. W., Doylestown, Pa.- Dissolve a teaspoonful of boric acid in one-fourth pint of water, flush sore eyes three times a day, use dropper or small syringe. Give her one-tenth grain calomel and five grains of bicarbonate of soda at dose twice a day. Keep her in warm place and give her good care.

WONDERFUL POULTRY BOOK The Nation's Great Poultry Manual. 144 Pages. Beautiful Pictures. All about Mrs. Berry's success with Pure-Bred Poultry and Hatchery; also short cuts to profits. AGENTS WANTED

WE HAVE an attractive proposition for some experienced silo or implement salesmen, either on salary or commission. Also, for farmers with spare time this Winter to work in their home neighborhoods with our block men. International Silo Co., Meadville, Pa.

WE PAY $200 monthly salary, furnish car and expenses to introduce our guaranteed poultry and stock powders. Bigler Company X718, Springfield, Ill.

Buy State Show Prize Swine at AUCTION

150 Head of the Best 150

One hundred fifty head of hogs, the finest specimens of the Keystone State's Swine Industry, will be sold at auction at the State Farm Products Show, January 19-23, 1925. The assembling of this number of swine constitutes an array of brood sows seldom if ever equaled in the East. Each animal entered in the show and sale a prize winner or its equal in county or district shows of the state. Pennsylvania hogs are very properly gaining the reputation of supplying the answer in the pork barrel. Pennsylvania stood second among all states in the union in total number of Ton Litters in 1924. Start with the right kind in 1925. Every animal entered in the show sells. An opportunity to invest in the country's finest hogs at your own price.

POLAND CHINA SALE—
Tuesday, January 20, 1925—2:00 P. M.

The New 1925 Walsh NO-BUCKLE HARNESS

NO BUCKLES TO TEAR · NO RINGS TO WEAR

30 DAYS FREE TRIAL

Send No Money I send you a set of my No-Buckle Harness to try on your own team, on your own farm, for 30 days without cost or obligation to you. Glad to send it—that's my liberal offer. Examine it, use it, test it in every possible way you can think of.

Then if you don't think that the Walsh is the best looking, strongest and handiest harness you ever laid eyes on, slip it into the box and return it to me. You don't even have to pay the return charges. I urge you not to wait a day before you get my new, free book that tells all about my special free trial offer. My harness book describes in detail this double-wear harness that has no buckles to tear straps, no rings to wear straps, no buckle holes to weaken straps. In a few years this wonderful harness has swept the country, making it necessary to enlarge my factory four times to take care of orders. A proven success on thousands of farms in every state. Post yourself on this latest, most up-to-date way of making harness. Write for my new, big, free book now.

See How Buckles Weaken and Tear Straps
The WALSH Has No Buckles—No Rings
See How Rings Wear End of Straps in Two

Here is the cause of all your harness trouble, repair expense, breakdowns. Why put up with this when you can get a Walsh, which has no buckles—no rings.

AS USED IN Walsh HARNESS
AS USED IN BUCKLE HARNESS
From photo of a test that shows how buckles weaken straps
WALSH HARNESS has no buckles, no buckle holes
Every strap has its full strength
STRAP WITHOUT BUCKLE HELD UP TO 1170 POUNDS PULL
SAME STRAP BROKE AT BUCKLE 360 LBS PULL

Three Times Stronger than Buckle Harness

Buckles Weaken and Tear Straps. As an example, a Walsh 1⅛ inch breeching strap holds over 1100 lbs. The same strap with the buckle will break at the buckle at about 360 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles—easy to see why Walsh is three times stronger than ordinary harness.

Walsh "Special Test" Leather

Users say that the leather used in Walsh Harness is the best they ever saw in Harness. I use only the choicest Packers' Northern Steer Hide Leather—tanned by the old-fashioned six months bark tan process. I want you to send today for my free book and read about actual test in steel testing machine—it proves that Walsh Leather holds twice as much as ordinary harness leather. Ask me to send you at once my free book, full of interesting and valuable information—explains fully how my leather is tanned and tested.

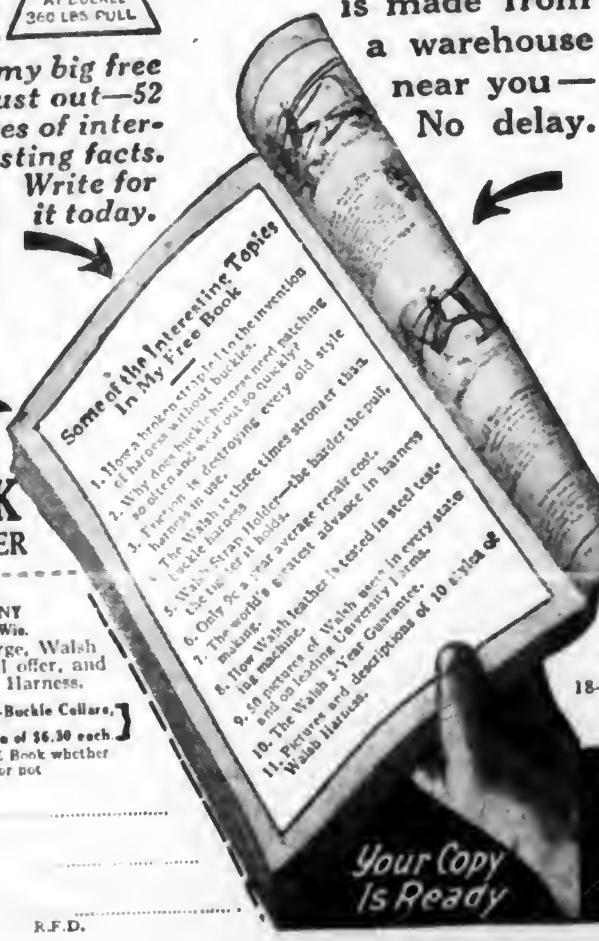
Over 30,000 Users Praise it.—Endorsed by Agricultural Colleges Government Experiment Stations and leading horsemen. Team with Walsh harness took first prize at Wisconsin State Fair.

Mr. G. G. Anderson, Aitken, Minn., who bought his 1st Walsh 5 years ago and bought 3 new sets since for his other teams, says, "Walsh has buckle harness beat a mile"

No matter where you live—prompt shipment is made from a warehouse near you—No delay.

New edition of my big free Harness Book just out—52 pages of interesting facts. Write for it today.

JAMES M. WALSH
President



Some of the Interesting Topics In My Free Book
1. How a broken strap led to the invention of harness without buckles.
2. Why does buckle harness need patching so often and wear out so quickly?
3. Friction is destroying every old style harness in use.
4. The Walsh is three times stronger than buckle harness.
5. Walsh Strap Holder—the harder the pull, the tighter it holds.
6. Only 9c a year average repair cost.
7. The world's greatest advance in harness making.
8. How Walsh leather is tested in steel testing machine.
9. 50 pictures of Walsh users in every state and on leading University farms.
10. The Walsh 3-Year Guarantee.
11. Pictures and descriptions of 10 styles of Walsh Harness.

Easily Adjusted to Fit Any Horse

In ten minutes a Walsh Harness can be adjusted to fit any horse perfectly, and it's a comfortable harness because it fits. It is much easier to put on and take off. No stubborn buckles to bother with when winter cold bites your fingers and straps are stiff. The adjustable strap holder, used exclusively on Walsh Harness, does away with all buckles and rings, and the harder the pull the tighter they hold: the world's greatest advance in harness making. No other harness ever made can equal it. Made in all styles, Breechingless, Side Backer, Back Pad, Express, etc., all shown in my big free book.

Be Prepared for the Spring Rush

Send for your copy of the big, free harness book today. Post yourself on this wonderful harness, so you can make your decision and get your trial order in quickly as possible. Have your harness ready for spring work when it comes. A delay at that time because of old broken-down harness will cost you dearly.

$5 after 30 days free trial Balance easy payments. Selling direct by mail to you enables me to give highest quality harness at lowest prices. There's a copy of my book waiting for you. Write today for book, prices, terms and how to make money showing Walsh Harness to your friends and neighbors.

BUDDY BOOT

THE boot illustrated is the Top Notch Buddy, made red or black, the famous "boot with the muscles."

The tests—
that guarantee mileage

TOP NOTCH Buddy Boots have been thoroughly tested where they will be worn. In plowed fields—in stumps and snags and muck—in ditches, slush and ice—the famous boots with the muscles have always made good.

Every other kind of Top Notch Rubber Footwear—boots, rubbers or arctics—must prove itself before it can join the Top Notch Family. After they have proved their long-wearing qualities, even under the hardest conditions, every single pair of that particular style or kind we ever make is built up, by hand, with the same painstaking care and of the same kind of materials as the test pairs.

It is not likely that you will ever put your Top Notch Rubber Footwear through such severe punishment, but if you do, you can be sure that it will prove satisfactory.

Top Notch Rubber Footwear costs no more than ordinary rubber boots or shoes. They will often give twice the service. They all have the Top Notch standard of mileage. They are made in all styles and all sizes—for men, women and children—boots, arctics, heavy and light rubbers.

The best stores carry Top Notch Rubber Footwear or will be glad to get it at your request.

They'll Place the Blue Ribbons
Judges of State Farm Products Show Exhibits

THE judges who will place the ribbons on the various exhibits at the Pennsylvania Farm Products Show, at Harrisburg, January 19-23, are:

CORN.—Nickolas Schmitz, Department of Agricultural Extension, Pennsylvania State College; Stanley Cobb, Department of Agronomy, State College.

POTATOES.—C. V. Hardenburg, Cornell University; C. F. Noll, Pennsylvania State College.

SMALL GRAINS.—H. B. Musser, Department of Agricultural Extension, State College.

APPLES.—A. Freeman Mason, Extension Pomologist, New Jersey Agricultural College, New Brunswick, New Jersey.

EGGS.—R. W. Hawley, Carlisle, Pennsylvania; E. J. Lawless, Jr., Pennsylvania Department of Agriculture, and M. H. Brightman, State College.

WOOL.—W. B. Connell, Department of Agricultural Extension, State College.

DAIRY PRODUCTS.—A. A. Borland, in charge, Department of Dairy Husbandry, State College, and Dairy Editor of Pennsylvania Farmer.

POLAND CHINAS.—Prof. M. F. Grimes, Department of Animal Husbandry, State College.

DUROC JERSEYS.—William Skelly, New Jersey Experiment Station, New Brunswick.

HAMPSHIRES.—E. Z. Russell, United States Department of Agriculture, Washington, D. C.

CHESTER WHITES.—E. Z. Russell.

BERKSHIRES.—Prof. W. H. Tomhave, in charge, Department of Animal Husbandry, State College, and Livestock Editor of Pennsylvania Farmer.

Low Fare to Harrisburg

THOSE who plan to attend the Farm Products Show in Harrisburg, January 19 to 23, should secure from their county agent a reduced fare certificate. This entitles the holder to a rate one-fourth less than the regular round trip fare to Harrisburg. The certificate is surrendered to the railroad ticket agent when the round trip ticket is bought. The return portion of the ticket must be stamped by the ticket agent in Harrisburg to be valid for the return trip.

Plans for the Show

THE directors of the Pennsylvania Federation of Holstein-Friesian Clubs met at Harrisburg on December 29 and considered plans for the Farm Products Show and annual meeting. Dr. L. M. Thompson, president of the Federation, presided at the meeting. It was voted to put on a representative Holstein exhibit at the show. The directors decided to hold the annual Holstein breeders' banquet on the evening of Wednesday, January 21 and, if possible, to arrange so that the annual meeting could be held at 4:00 P. M. the same afternoon instead of 10:00 A. M. the following morning as scheduled.

On motion of Director Paxton it was voted to give a cup to the team from the vocational schools of the state winning the dairy cattle judging contest. Federation ribbons will be presented on the evening of Tuesday, January 20, by Dr. Thompson. —G. H. T.

May Enter Penn State

ADMISSION will be granted to one hundred young people at the Pennsylvania State College at the beginning of the second semester in February. These new men may enter every course except those offered by the School of Liberal Arts.

This opportunity to enter college in February is expected to be especially welcome to those who had hoped to take an agricultural course last fall, but who could not leave home on account of farm work. Application blanks for new men may be secured from the registrar's office upon request.—B.

A Jerseyman's Weed Troubles
He Is Holding His Own against Thistle and Dock

LAST fall I made a 1600-mile automobile trip, going first to Niagara Falls, then across country to Rochester, Thousand Islands, down thru the Adirondacks, over into Vermont and New Hampshire, down the Connecticut River Valley, and back home.

I made, of course, a hasty observation of farming conditions on this trip, and I am extremely sorry to see how little interest the average farmer seems to take in the weed question.

The worst pest in northern New York today seems to be the Canada thistle. I saw beautiful fields of ripening oats and wheat (the latter for harvest—most of it cut) with a tremendous amount of this terrible pest.

A Stubborn Fight with Thistle

Now, a lot of our seed oats,—and I imagine wheat, also,—comes from this section. I know I have a patch or two of Canada thistle on my place that I have been strenuously trying for five years to eliminate. I have not permitted it to spread, but the old patch seems to come to life every year. I got this by buying a carload of alfalfa hay, six or seven years ago, from Syracuse. It was sold to me with the assurance that there was no noxious weeds in it.

I have wondered how far we can go, or what we can do, to enlighten the farmers on this subject, because, with the growing dairy industry in the state, cattle men will buy hay and they will get weed seeds.

Pestered by Docks and Milkweed

We are pestered here with the dockweed, and there is a growing amount of milkweed in my neighborhood, altho I think I have none of it on my place. I have a lot of dock weed,—I imagine it came in my clover and timothy seed,—which I am fighting pretty hard now, but it is an uphill job when labor is so high and so untrustworthy.—C. H Z., Monmouth County, N. J.

I found much of interest in your letter. Your observations agree well with those received from others concerning the more rapid spread of Canada thistle.

There are a number of other weeds which have become more serious of late, partly because of the less careful methods of cultivation employed on farms where the labor problem is becoming more serious from year to year. Now we are told of the appearance of a new pest. Austrian field cress, reported from Orange County, New York.—J. G. Lipman.

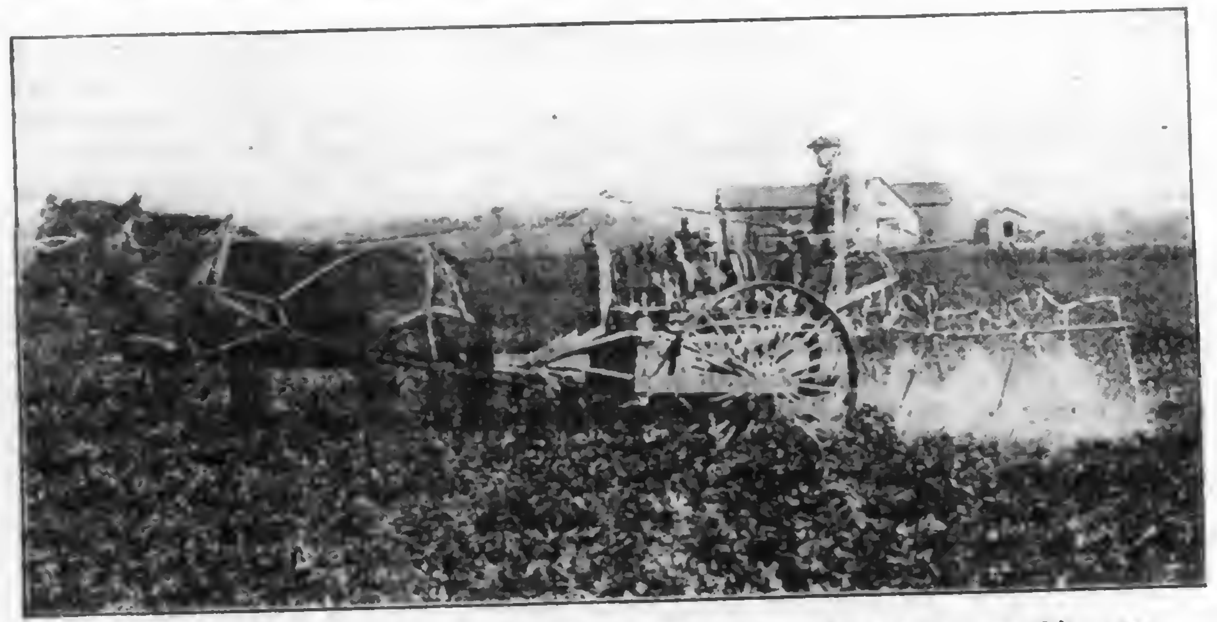
Those 1924 Potato Prices—Why?
Growers Suffered Losses because They Had the Truth but Not the Whole Truth

By DANIEL DEAN
Tioga County, New York

THE 1924 potato crop is being sold by its producers at what is, by comparison, the lowest price received for any American farm crop since the war. Not for ten years have potato prices been so low to New York State growers. To get much lower prices it is necessary to look back to the hard times of the nineties of the last century. At the same time, wheat is fast climbing towards $2.00 per bushel. While some staple farm products, as market milk and hay, are low in price, other products such as corn, cotton, wool and poultry products are higher than for several years back. Potato prices are the lowest for ten years. Why?

Must Have Whole Truth

The obvious answer is the one instantly heard on every side since the publication of the government crop estimate of November 1. "Big crop." "Biggest crop on record." "Four hundred and fifty-four million bushels of potatoes this year." Each of these statements is the truth. Each contains nothing but the truth. But the witness on the stand in court is sworn to tell not only the truth, and nothing but the truth, but the whole truth as well.



High-pressure power sprayer used by Daniel Dean, author of the article on this page.

The whole truth is that the population of the United States, which consumes the potato crop, breaks its record every year, and that when the number of bushels grown this year is divided by the number of consumers, the result, which we call the per capita production, is very far from being the largest on record.

In the last thirty years no less than seven other potato crops have had a larger per capita production than this year's. The seasons were those of 1895, 1904, 1909, 1912, 1914, 1917 and 1922. From 1910 to 1920 the census reports a population increase from 91,972,666 to 105,710,620.

Since 1920 the Bureau of Economic Research has estimated the population every six months, studying the figures of deaths and births reported by doctors and the net change in population resulting from the difference between immigration into and emigration from the United States. The Bureau, whose estimates have been closely verified in the past by the federal census, now estimates our population for July 1, 1924, at about 114,000,000. The steady increase in the number of consumers means that our potato production must now be increased by 6,000,000 bushels each year to meet the increased demand.

Most people think a lot about the record breaking potato crop estimate for 1924 when they think of potatoes. Very few ever think at all about the record breaking increase in the number of consumers. Why not? What every one, producer, dealer or consumer should think about is the combination of the two estimates of production and population to get the per capita production, which is far from breaking any record at all.

It's Quality That Tells

It is the quantity of potatoes produced for every consumer which tells whether there will be too few or too many potatoes left to eat and to plant before the last carload rolls to the city some time next June or July. When the number of bushels, 454,784,000, is divided by the number of people, it will be seen that there are less than four bushels for each person to provide for eating, for seed to plant, and for the natural loss by shrinkage in storage.

How differently that sounds! Every time a potato grower has heard of the "record breaking potato crop" he has felt a burning desire to rush to town to sell off his own crop before any other farmer. With several million other potato growers in the same frame of mind, there was a surplus of potatoes offered for sale every day this fall.

All Thought Alike!

On the other hand, every dealer, grocer or consumer had heard all about the "record breaking potato crop" too. Each felt sure that there could be no shortage, and that no matter how low potatoes were, the price might and probably would go still lower. With most growers anxious to sell, and every buyer taking potatoes only as fast as he or she could use them, it is no wonder that potatoes have sold at starvation prices to the growers all over the United States.

The first cause of the low potato prices this fall was the low price at which the early crop from the South sold last spring and summer. The South usually gets its first cars up from Florida in March, only a few a day at first compared with the heavy shipments from northern states which at that time still supply most of the city demand. Each week from March thru to July the southern shipments of early crop increase gradually, and the northern shipments steadily decline. By June first there are more cars of early crop than of late, and by July first there are left only a few cars of old crop to ship from the far north of Maine, Michigan or Minnesota.

Vol. 91, No. 3. Phila., Pa., Jan. 17, 1925 Whole No. 1444

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

No one is useless in this world who lightens the burden for some one else.—Charles Dickens

Safe Investments

FARMERS or others who have money to invest and who prefer safety and reasonable returns to uncertainty and promises will do well to buy Federal Land Bank Bonds. They are tax-free and may be had in amounts as small as forty-dollar bonds. From this they are issued as high as ten thousand dollars. No safer investment can be made since the United States government stands back of them. We offer this suggestion at this time because some questionable concerns, inspired by the news items telling of the prosperity of the farmer, are already scouring rural neighborhoods to gather in some of it by selling stock in unknown enterprises and offering big returns. It is all too true that many farmers show greater faith in the promises of strangers representing unsound ventures than they do in their own business. The first and best place for a farmer to invest money he has made is in his own farm. The next is in bonds on agricultural land in general.

Solving Farm Problems

THE farmer has two classes of problems to study.—individual and collective. Under the former head may be placed the problems of production, and under the latter the questions relating to marketing and other activities needing co-operative action. The successful solving of the questions in both classes requires instant and intelligent attention on the part of every farmer in the land. In neither class has there been the serious and persistent study given the subjects which is necessary to take the business of farming out of the shell-game class. Even the agricultural teaching agencies have not kept pace with the rapidly developing needs in the business of agricultural production and marketing. Education should enable us to avoid certain catastrophes, not merely to analyze them after they have happened.

In the other, the collective or co-operative class of subjects, there is an equally great need for deeper study, wiser action and more intelligent leadership. Altogether too much of the effort towards co-operation has been based upon theories evolved too far away from the realities of the farm. No great structure was ever erected from the roof down.

Most of the trouble in both cases is due to the fact that the farmer follows the principle of, "Let George do it." If farming is to be a reasonably safe and profitable business in any given case the farmer himself must tackle the problems of his individual farm as a successful scientist takes hold of a question and gives it the best thought that is in him. The collective problems of farmers must be tackled in the same way. Co-operation is ineffective so long as it remains a theory. It is only a reality when individuals lay aside their pet prejudices and honestly try to work intelligently and in harmony with others in the effort to reach a desired end. Co-operation is not a commodity that may be shop-made and sold to a community. It must grow and develop from the seed right on the farm.

Four Grave Menaces

The Men Who Are Fighting Destructive Insects and Diseases Must Not Be Hampered By Lack of Funds.

PENNSYLVANIA farmers have more than their full share of things to worry about this year.

In the southeastern corner of the state the Japanese beetle has gotten a foothold and is preparing to sweep northward and westward toward the shores of Lake Erie. In a still larger section in southeastern Pennsylvania the Oriental moth is intrenched for an attack on tree fruits. Up in the northwest corner of the state the European corn borer has established itself and has started a destructive march toward the south and east. And over the whole country that treacherous plague, tuberculosis, is taking its toll of human lives and cutting into the very heart of some of our finest dairy cattle herds.

These four great evils constitute a menace, not only to the people of Pennsylvania, but to the whole nation. The federal government has recognized this and is doing its part toward their control. But a great part of the work has been left to Pennsylvania. How she is to meet the emergency depends upon the action of the Legislature now in session.

If economy is to be the watchword of members of this Legislature here is an opportunity for them to use it.

For, if it is economy to fight small fires rather than wait until they become big ones, then it will be economy to fight the beetle, the moth and the borer now, while they are still confined to a comparatively small area.

If it is economy to keep people well rather than to let them get so sick they need expensive hospital treatment, then it will be economy to rid Pennsylvania of bovine tuberculosis as soon as possible.

However much we may wish to conserve the public funds and save expense, this fact remains: insidious disease and destructive insects are here, now. Indifference, political expediency or false ideas of economy must not be allowed to prevent the appropriation of funds adequate to meet this grave emergency.

A Good Slogan

THE farm implement trade has adopted the slogan, "Good equipment makes a good farmer better," for use in the promotion of their business. The trade association offered a prize for the best slogan and a Missouri woman won it with the one quoted above. Out of forty thousand submitted the judges felt that "Good equipment makes a good farmer better" expressed a self-evident fact so patly that everybody would recognize its truth at once.

We heartily approve of its being adopted by farmers as well as the implement trade. We know from experience as well as from observation that nothing is more disheartening than poor tools and equipment, and on the other hand nothing adds so much to the pleasure of working as having good, serviceable, effective tools and machinery. We do not wonder that a woman should be the prize-winner, as the farm woman of the land know better even than the men the discouraging influence of poor and inadequate equipment. Let us repeat these words until they are as familiar as the alphabet.

Food Values

IT IS probable that most people choose what they eat because they like it, or avoid certain foods because they don't like them, but there is no question that more people now make selections intelligently with a regard for food values than was the case a generation ago. The science and art of combining foods for best results, applied first to farm animals, has now, a generation later, become a matter of recognized importance in feeding the human body, thanks to the influence of domestic science courses in educational institutions and food producing organizations.

A farm girl came home from her vocational school class one evening and said to her mother: "Mother, it's no wonder this family has colds all winter since about all we have to eat is buckwheat cakes, sausage, potatoes and bread."

"What's the matter with them," asked the mother. "We have plenty of them and your father and I were raised on them."

The daughter then went on to explain what she had learned about the value of milk, green food and fruit, and proposed taking over the job of planning and helping prepare the meals for a while. The mother, altho known as a good cook, was big enough to "encourage" her daughter by agreeing. She was also big enough, in telling about it, to acknowledge that the family health and spirit was greatly improved after a few weeks of the change.

For Poultry Buyers

MODIFICATIONS in the embargo placed upon the shipping of poultry into Pennsylvania have been made by the authorities so that poultry raisers and breeders may receive stock from outside the state. The ruling provides that the sellers of poultry shall submit to the Pennsylvania Bureau of Animal Industry a certificate from an officially approved veterinarian stating that the birds covered by the certificate are in a healthy condition and have not been exposed to the fowl plague or other transmissable poultry diseases.

Potato Prices

WE PUBLISH this week the first installment of an article by Daniel Dean on the 1924 potato prices. We know of no grower who makes a more careful study of all phases of potato growing and marketing than does Mr. Dean, and his contention that publishing only part of the truth in relation to the potato crop creates an impression in the public mind which materially affects the price of potatoes is worthy of serious consideration. We are sure Mr. Dean will welcome comments and criticism of his views after the whole article has been read.

Washington Letter

CO-OPERATIVES MAKING PROGRESS.—Co-operative commodity marketing has made definite progress during the past year. More farmers are tied up in commodity co-operative associations than ever before. There has been an increase in the volume of business. Progress has been made in efficiency. Some associations are operating at from thirty-five to forty-one per cent less per unit of product handled than two years ago. This was the news that Carl Williams, of Oklahoma, brought to the third annual conference of the National Association of Co-operative Marketing Associations at the New Willard Hotel, Washington, January 5-8.

The real test in co-operative marketing, according to Mr. Williams, is not the getting of an increased price above that of the non-member, for this isn't often done. The function of co-operative marketing is to raise the price level of the product.

ADDRESSED BY PRESIDENT.—The conference was attended by a large number of delegates representing thirty-two farmers' co-operative marketing associations, with more than 1,100,000 members and doing a business of upwards of $600,000,000. The program was constructive, devoid of radical propositions and indicating a marked advance in leadership as well as in rank and file.

By invitation of President Coolidge the delegates visited the White House. In welcoming them, the President said that there had been too much tendency to surround co-operative organizations and processes with mystery. "It has been announced solemnly and sepulchrally from the hollow depths of self-constituted oracles, that Americans are not the sort of people who possess the genius for co-operation. We have been assured that they are too individualistic, too loath to yield any part of their independence and initiative. People who indulge this kind of nonsense invariably assume that co-operation is a new and comparatively untried formula. They have overlooked the fact that all human society is a vast system of co-operations. From its simplest to its most complex manifestations, there is nothing to it but co-operation. It began with the discovery that two people could together roll a heavier stone or move a bigger log than could be done alone."—E. E. R.

Harrisburg Letter

POLITICS AND A SHORT SESSION.—Once in a while politics works out to a good advantage in the organization of a Pennsylvania legislature and it would appear that the the fight over the speakership between Governor Pinchot and a group of big state leaders is going to bring about that much hoped for of lawmaking occasions—a short session. The men directing the opposition to the Governor not only put thru a resolution for adjournment on April 16, but laid down the policy that there was to be no needless squabbling over legislation.

VEHICLE INSURANCE ROW.—A first class row will start as soon as a bill for compulsory insurance of liability of motor vehicle owners shows up and it will probably lead to sidetracking of any new compensation legislation, including the scheme to extend the compensation system to domestic and agricultural service.

SHOOT DEER WHEN RAIDING.—The conference in charge of ways and means to meet the damage by deer has reached agreements whereby the Legislature is asked to provide that the Game Commission be given authority to declare open seasons on doe as well as bucks; that farmers be permitted to shoot animals when raiding fields or orchards and keep the carcass after giving notice and that the state take steps to pay for damage. Bills with these objects will be presented early in the session.

LOCAL TAXATION.—Bills for improvement of conditions in local taxation and for economy in collection have been made ready for introduction into the Legislature late this month and have apparently more support than last year, but if they get tangled up in any new taxation legislation they are headed for the junkpile. Owing to the short session program the agricultural program will likely appear early and action asked without the extended hearings which have held up things in years gone by. The temper of the Legislature will not encourage protracted hearings.—Hamilton, Harrisburg.

New Jersey Letter

CHILD LABOR RATIFICATION.—Within the past few weeks, farm opinion has taken definite shape against ratification by New Jersey of the Child Labor Amendment to the federal Constitution. The amendment would restrict the working of boys and girls on farms in New Jersey, even under the supervision of a relative, and the unnecessary hardship involved would work to the detriment of agricultural production, so various farm leaders claim. In order for the federal amendment to be ratified, three-fourths of the states must pass the measure.

LEAGUE SUGGESTS FARM CONFERENCE.—The State Fish and Game Conservation League, which met last year with the state farm bureau for a discussion of current problems, proposes another conference this season for a discussion of agricultural and game needs. The invitation of the sportsmen's association has been accepted; the date for such a conference is yet to be decided upon. The League has no official relation with the State Fish and Game Commission at Trenton. The membership comprises sportsmen and others, chiefly in the northern part of the state.

INCUBATORS NOW STARTED.—Commercial poultrymen in central and southern New Jersey have already started their incubators for the season. Several of the large baby chick producers started their machines at the first of the year, while poultrymen who cater to the broiler trade and to the early fall demand for market poultry were scheduled to start their machines in mid-January.—B.

Now that we have him corralled let's look to our fences.

New York Letter

FOWL PLAGUE.—Congress has authorized an appropriation of $100,000 to combat the European fowl plague, which largely centers in New York. A campaign to eradicate the trouble has already been inaugurated by the United States Department of Agriculture and the State Department of Agriculture and a strict quarantine has gone into effect. Farm agents are urging local shippers who are not restrained [illegible] to hold all shipments for a time and to burn any coops they have which have been returned recently from New York. Many carloads of birds remain unsold in New York as buyers will not take them, so great have been losses.

STATE-WIDE CHURCH PROGRAM ADOPTED.—In line with successful activity in other states a New York State Council of Churches has been organized and has held its first meeting. All Protestant denominations will unite on a co-operative program, employing an executive secretary with headquarters in Syracuse. Competition between demominations is recognized as detrimental and out of date, and a stronger, more vital system of management will be adopted.—M. G. F.

County Notes

BERKS COUNTY, PA.—The first blizzard of the season appeared today. A lot of fall plowing has been done. Corn is all husked and corn stover all placed on stacks. Some of the corn in cribs proves to be of an inferior quality. Butchering season at its height and some heavy hogs were slaughtered for home use. Grange meetings are well attended during the winter. This county still has some farms to rent.—W. N. M., Jan. 2.

BRADFORD COUNTY, PA.—The county is now covered with about four to six inches of snow. Dirt roads are very rough and little hauling is being done. Rural mail carriers traveling mostly by horse now thru the hills. Winter grains have a poor showing for a good crop. The large hay crop of the season is nearly all pressed and ready for market. Quality in general not so good as usual; price rather low, $14@17. Butchering all over and much work being done in the woods at present. Poultry in general in average condition and production. A new disease has appeared dring the last season in flocks purchased as baby chicks from an Ohio hatchery. This shows itself as some form of paralysis, usually in the wings or legs. No actual cases of Poultry Plague have developed.—G. E. E., Jan. 5.

CENTRE COUNTY, PA.—Along with the new year we got about six inches of snow and are now having nice winter weather. Some fine ice has been harvested. Part of the men hauling props and ties to the railroad are using sleds. Butchering is about all done. Fat hogs were scarce this year as the soft corn lacked the power to fatten. Little pigs are not in demand and many chickens have been disposed of because feed is so high. Prices: wheat, $1.75; rye, $1.20; corn, $1.20; barley, $1; buckwheat, $1.10; oats, 55c; butter, 50c; eggs, 60c; lard, 20c.—A. I. A., Jan 6.

CLEARFIELD COUNTY, PA.—Have had unusually cold weather for December, snowfall has been light and traffic is divided between sleds and motor vehicles. Some of the farmers are storing ice which is of good quality. The harvesting of ice for summer use is not as common as formerly, due largely to shortage of help for hand cutting. During the recent cold snap local coal mines were pushed to supply house trade at 10c per bushel at the mines. This is bituminous coal and weighs about seventy-eight pounds to the bushel. Cabbage, turnips, potatoes, apples are slow sale. Prices: cabbage, 2c; potatoes, 75c@$1; apples, $1@1.50. Farm killed beef is hard to sell at 9@10c delivered. Eggs were 75c but have now declined at local stores to 60c; butter, 50@60c. Dressed pork, light weights 13@15c. Hay and straw moving in small quantity at moderate price.—D. H. W., Jan. 3.

CRAWFORD COUNTY, PA.—Weather has been very cold for the last two weeks but warmer now. Farmers busy doing chores and getting fuel for heating. Dairy products are low in price and feed high. Farmers do not get much for their labor. Milk dealers have sent out letters to all milk producers requesting them to build milk houses and clean up their barns, thereby producing a higher quality of milk. Milk, $2.26 cwt. Not many farmers selling potatoes at prices shippers are offering, 45c but few sold locally at 75c delivered to consumers. Farm census enumerators report they find many vacant farms, also many farmers who do not keep account of their business. Quite a number of radio sets have been purchased this fall [illegible].—O. W. G., [illegible]

FREDERICK COUNTY, MD.—The new year was ushered in with about an eight-inch fall of snow. There is still quite a lot of corn remaining in the field. Some fall plowing was done [illegible] early fall but ground has been too wet [illegible] month in most places. Grain rather scarce [illegible] section this season. Hogs show some improvement the past week. Hay remains steady, ranging from $12 to $15 per ton. Eggs are around 55c; butter, 40c.—R. J. W., Jan. 5.

GOLD SEAL

Look for the Gold Seal

FOR more than half a century—ever since the beginning of "Gold Seal" and "Snag-Proof" Rubber Footwear—we have been guided in our manufacturing policy by old-fashioned ideals of *honesty* and *value*. We are still old-fashioned in this one respect — and are proud of it.

Our reward has been worth-while, proving that even in these hurly-burly times, "honesty is the best policy". "Rubber-wise" people—those who have worn all kinds of rubber footwear, looking for the best — invariably make "Gold Seal" or "Snag-Proof" their final permanent choice. They have been doing this in always increasing numbers since 1872.

The Goodyear "Gold Seal" trademark identifies rubber footwear of *super-quality*, while the Lambertville "Snag-Proof" trademark is a guarantee of finest *standard quality*. Both of these popular brands of rubber footwear are made by the Goodyear Rubber Company and are sold by most good shoe merchants.

This trademark, in green, identifies highest grade *standard quality* rubber footwear.

OUR FARM

Where an Editor Works and Thinks

TO ONE who was born and bred in the mountain district of central Pennsylvania it is amusing to hear Easterners refer to a fair-sized snow storm as "a blizzard." A snowfall of six or eight inches is "a heavy snow," and two week's sledding makes a long winter. This will make the twelfth winter we have lived in eastern Pennsylvania and we have yet to see or feel anything of blizzard proportions, or snow deep enough to seriously impede the work of a mountaineer. There is one slight exception to be made, however.

I started one night from my present home to join the institute force in Lycoming County. It had snowed all day but the temperature was barely below the freezing point. A high wind sprung up from the west about dark and rapidly drifted the roads full. My train left at nine o'clock and I had difficulty in getting to the station, and in finding it after I got there. We left on time and had proceeded less than two miles when the train stalled in a deep cut. The engineer vainly tried to go ahead, but after several unsuccessful attempts decided to back back to the starting point. So fast did the snow pile up that he found it equally impossible to go back. There we were, stalled in a cut twelve to twenty feet deep with snow piling in faster than a hundred men could have shoveled it out. Fortunately, it was not cold and there was plenty of steam. There was nothing to do but stay in the train, and so hard did it drift that it was not until after ten o'clock the next day that we could leave the train, thirteen hours after it stopped.

While that was an inconvenience it was not a hardship, since it was not cold and the snow did not last long. In our old home we have had one hundred continuous days of sledding. I have known the thermometer to stay at zero, and below, for a week at a time with a piercing blue snow driving from the northwest. The coldest morning I ever experienced sent the thermometer to thirty-six below zero. We were retailing our milk in a nearby town and that was my week to drive the milk sled. I did not leave on scheduled time that morning. I waited until it moderated and it was only twenty below when I pulled out at nine o'clock.

An Adventurous Trip to Mill

Of course, in no section of the East do we have blizzards of the size and temper of those which occur in the Northwest, but the little sample blizzards sometimes visiting the mountain districts of Pennsylvania enable one to imagine something of their character. I remember very vividly an experience which occurred about twenty-five years ago about this time. It had snowed for two or three days and the snow was about two feet deep on the level. The weather had not been cold, nor was it windy. Travel had kept the roads open and fairly well broken, and it seemed favorable for taking a load of wheat to mill. We loaded up the twin sleds with forty bushels and left early on a beautiful, still morning planning on making the trip of sixteen miles and back by dark. My brother, who was in his teens, accompanied me for company and for the pleasure of the trip.

How the countryside looked after the late snow storm.

The Storm's Approach

We had proceeded a couple of miles when we noticed a breeze spring up from the northwest. Snow began to drift lightly across the track. The air suddenly developed a chill feeling not felt earlier. A hazy appearance showed along the horizon and this gradually but steadily spread until it covered the sky and soon the air was filled with a driving snow. This was a good time to turn around and abandon the journey, but we kept on. The wind increased and the temperature was going down every minute. The road was filling up and the team, facing the storm, had difficulty in wading thru it. We had to stop frequently to "wind" them. Altho we had blankets with us, our position on top of the load exposed us so that we took turns in driving and walking behind to keep warm. At one time we turned out on meeting another sled and the runners went down so deep that the horses could not pull us out. It required a good part of an hour to shovel out, but it warmed us up. We kept crawling steadily onward, reaching our destination about two o'clock in the afternoon, — seven hours after we left home. The thermometer had dropped from twenty-five above to five below.

Home a Welcome Sight

We decided to return with an empty sled, and after rubbing down the horses and giving them a good feed and eating a hot dinner ourselves we started back. There was little or no travel and the road was full and running over; still it kept on blowing and snowing, and it kept getting colder every minute. Even tho we were not loaded we made but slow progress. It grew dark when we were about half way home. In some places the road was piled full from fence to fence. Once the horses missed the road and we found ourselves in a field on the other side of the fence. The sled tipped up and overturned the lighted lantern which we held under the blankets to keep us warm. Fortunately it went out before it fired the oil soaked straw in the sled. Because of the darkness and the snow-filled air we could not see and from this on we had to trust to better heads and keener eyes than our own—the horses'.

We arrived home at nine-thirty, P. M., and that was one time we endorsed without reservation the sentiment in John Howard Payne's immortal song, and also one time the home folks were genuinely glad to see us. It was twenty degrees below zero.

This is a good bit about weather but that is about all there is to talk about now, as Our Farm is completely and comfortably covered with a beautiful blanket of snow.—R.P.K.

THE CHEERFUL PLOWMAN

∴ *The Early Day Horse Doctor* ∴

FOR many years Alonzo Meers was doctor for our steeds, and treated kine and ailing swine, and sheep of varied breeds. In early days his herbs and ways were welcomed fast enough, altho a few declared they knew the man was "mostly bluff." He made egg-oil that wouldn't spoil, used sassafras, I'm sure, made liniment with pungent scent, a hot and piercing cure. With turpentine of any line, ammonia, and eggs, he mixed a dope that brought new hope to colts with sprained legs. An ailing horse, he bled, of course, and [illegible] heated oats, and washed the hay to take away the dust and lurking motes.

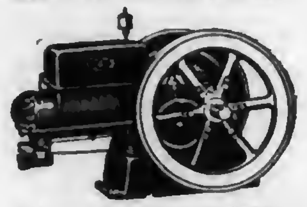
We sent for Meers when we had fears that Dobbin had the heaves, or Patsy's goat had itching throat from eating flannel sleeves. We sent for "Doc" when Slim or Rock showed colic, cramp, or kink, and shine or rain, "Doc" decrepit rig, by hill and plain, he always came, I think! His jingling gig, decrepit rig, by river, dale, and hill, was on the go, as to and fro he carried fleam and pill.

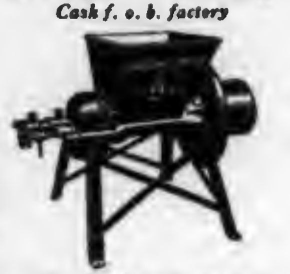
Some horses died, I'm satisfied, that might have lived for years if they had not when sick and hot encountered "Doctor" Meers, but spite of that I raise my hat to servants such as he who have the nerve and try to serve as far as they can see. He met the test and did his best, he tried to do his part, and he has got a mighty spot pre-empted in my heart!—J. Edw. Tufft.

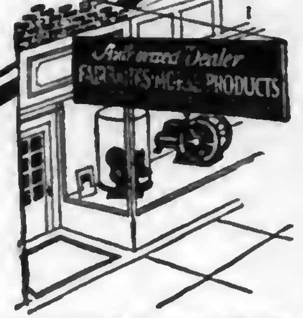
The Last Hearing

THE Agricultural Commission which has been holding meetings with farmers in various parts of the state, will have its final hearing in the Senate Chamber, State Capitol, Harrisburg, January 21 and 22. Individuals and representatives of farm organizations are invited to testify on agricultural problems and make suggestions for remedies.

Individuals will be heard the first day and representatives of farm organizations the second day. This hearing will be held during the week of the State Farm Products Show when some twenty-five farm organizations convene in Harrisburg. Senator Horace W. Schantz is chairman of the Commission, and Representative W. A. Haines is secretary.







5 WAYS to Improve Your Farm

Home Light and Power Plants

Both electric light and engine power from one plant at one cost. Engine power is available at belt pulley while battery is being charged. Engine power alone or electric light alone at any time. Double utility at one low cost.

Prices
No. 1½ Plant $325.00
No. 3 Plant 525.00
Cash f. o. b. factory

"B" Feed Grinders

Grind grain mixtures as well as any single grain. When grinding plates are worn on one side they can be turned and used again. Non-bridging hopper, safety flywheel, cutting knife adjustable from outside—extreme simplicity assures long life.

Prices
No. 4 ....$11.00
No. 8 .... 40.00
No. 10 .... 55.00
Cash f. o. b. factory

"Z" Engines

Over 400,000 farmers use this engine because it is low in first cost, low in operating cost, and is absolutely dependable.

It is simple, sturdy and powerful. Has high tension battery or magneto ignition; suction fuel feed; positive lubrication; renewable die-cast bearings; parts subject to wear are hardened and ground; crankshaft, connecting rod and camshaft are drop forgings. More drop forgings and specially heat treated parts are used than in any other engine of this type. Highest quality obtainable—at the lowest price possible!

Prices
1½ h. p. bat. equipt $48.50
1½ h. p. mag. equipt 58.50
3 h. p. bat. equipt 83.50
3 h. p. mag. equipt ... 98.50
6 h. p. mag. equipt . 153.50
Prices quoted are cash f. o. b. factory; add freight to your town

Steel Eclipse Windmills

All parts are completely enclosed and run in oil. Cut pinion and worm gear eliminate many parts. Crankshaft is drop forged. All working parts machined to close limits. Simple, all-metal construction—built for a lifetime of service. Self-regulating. Quick down stroke, slow lift—actual pumping two-thirds of the time. Wheel is tilted to take advantage of slightest wind. Sizes: 8 ft. and larger.

Home Water Plants

At an extremely low cost you can have water under pressure —hot or cold—in bathroom, kitchen, laundry, barn, watering trough—wherever you want it. The Fairbanks-Morse Home Water Plant operates automatically. There is an outfit to draw water from cistern, spring, shallow well or deep well.

120 gallons per hour capacity pump, 60-cycle motor, 8 gal. galv'd tank, complete, $84.75

200 gallons per hour capacity pump, 60-cycle motor, 35-gal. galv'd tank, complete $115.00.

Also larger sizes, for engine or electric drive, correspondingly low priced.

Prices quoted are cash f. o. b. factory

Running Water makes the farm home a happier, more healthful living place. A Fairbanks-Morse Home Water Plant can be installed in any farm home.

Electric Light is a real comfort. It saves labor and greatly increases efficiency in home and barn. The Fairbanks-Morse *Home Light and Power Plant* furnishes both light and engine power.

An Engine is a worker that saves its cost many times each year—a positive need on every farm. The "Z" Engine is known everywhere as the finest of its kind.

Ground Feed makes every bushel pay —brings quicker results, is more economical, and cattle relish it more than whole grain. The "B" Feed Grinder is one of the best values ever offered.

A Windmill is a helping hand that gets its power free. Steel Eclipse Windmills are built for a lifetime of service.

These five products are made in the great Fairbanks-Morse factories, where "quality" alone is the ruling standard. Read the brief descriptions above. Compare the prices. Realize why over a million American farmers use Fairbanks-Morse equipment.

See your local Fairbanks-Morse *authorized* dealer, or mail the coupon.

The local Fairbanks-Morse *authorized* dealer will be glad to give you complete information on any of these items. Mail the coupon, properly checked, and we will send you complete literature.

Other Fairbanks-Morse Products are washing machines, electric motors, a complete line of general service pumping equipment, pump jacks, power heads, etc.

I Learned this Priceless HARNESS SECRET From a Pail Handle

John C. Nichols President

$5 Down after 30 Days' Trial; Balance Easy Monthly Payments

To prove my claim that Wear-More is the strongest harness made, let me send you any style you select for 30 days' free service on your own team. Test it in every way. I take your word for it if not then convinced. Simply return it at my expense. Write today for big, free book, with new reduced prices. See how I've done away with rubbing and see-sawing between leather and metal. Doubled wear right here! Learn how short-snubbing of leather under buckle edge or around narrow metal units costs you money in breakdowns and repairs. See how I overcome this—how I learned this priceless harness secret from a pail handle. I believe you owe it to your pocketbook to investigate, at once, this marvelous advance in harness-making and harness value.

JOHN C. NICHOLS, *Pres.*
1896 Erie Ave., Sheboygan, Wis.
John C. Nichols Co., Also Originators and Makers of FitZall Collars
Est. 1909

See strap above—how oil was squeezed out, fibers packed and strap cracked till ready to break in two. Like carrying pail with wire handle. None of this in Wear-More Harness! Patented protecting buckles let leather pull against big, broad surface, just as well protected as your hand around the large, comfortable wooden handle on a pail bail.

Free Book On Bigger Value Harness

The New GIANT Crankshaft in Hayes Triplex Sprayers

Made 50% over-size like the crankshaft of an automobile. Has wide margin of safety.

Hayes Power Sprayers are Built Like an Automobile

The universal satisfaction which fruit growers have with Hayes FRUIT FOG Sprayers is largely due to the perfection of design, simplification of parts, and the margin of safety in every point of construction. Nothing could illustrate the character of manufacture better than this GIANT crankshaft.

As a result, Hayes Power Sprayers develop 300 lbs. pressure year after year, and the amount of service required is exceptionally small. Every part is as accessible as in automobile design.

Let us tell you how Hayes FRUIT FOG kills diseases and pests which go untouched by drenching with low pressure sprayers. Our prices are low.

SEND FOR CATALOG before you buy. Nearly 50 different models, varying in capacity and design.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser
Manager Pomona Gardens, Newark, Delaware

Just Making a Start in the Truck Business

I am a young man just starting into the poultry and truck business. I have seventy acres of land. I intend to raise pumpkins, squash, cucumbers, beans, peas, and sweet corn, also potatoes and tomatoes. My land is black slate or gravel loam, fairly good land. I have lots of poultry manure, kept dry but not ground, also well rotted stable manure. I would like to know what fertilizer I should use, if any, with the crops. I have tamed the cucumbers and pumpkins. I intend to dig hills and fill in with rotted manure but could I use any fertilizer that would help? Also on the tomatoes and other crops should I use only poultry manure or mixed fertilizer?—H. M. McV., Blair County, Pa.

The crops you mention are all those that can be grown successfully with manure alone. The only two that you might wish to get especially early, sweet corn and cucumbers, you could topdress with some of the poultry manure and doubtless get the same results as if you used nitrate of soda for this purpose, altho the latter would be a little easier to apply. Still, most of us would gladly sacrifice a little in convenience to save the cost of nitrate.

Your first problem is to decide whether you have sufficient manure to cover all your land. The sweet corn and tomatoes should have at least ten tons per acre of the stable manure, and if the land is not very rich, the same amount for the peas and beans. Regarding the potatoes, there may be danger of scab if you depend upon manure alone. On perfectly clean soil and with seed wholly free from scab, you will not get any of this disease on the potatoes even under heavy manuring. On the older farms, however, it is not safe to depend upon having scab-free land.

Use Mixed Commercial Fertilizer

In the case of potatoes, therefore, you may do well to use a mixed commercial fertilizer with at least four per cent of ammonia, eight or ten per cent of phosphoric acid, and five or seven per cent of potash, not less than a half ton to the acre.

If you have to shave down your yard manure applications for any of the other crops, except those you intend to grow in hills, you can use 500 to 1000 pounds of this same fertilizer in addition to the manure. You could grow peas or beans on 500 pounds of it, early sweet corn on 1000 pounds, late sweet corn on a little less, especially if there were a sod to plow under; 500 pounds of this fertilizer with ten tons of manure should give you good tomatoes.

On nearly all Pennsylvania soils the use of acid phosphate with yard manure is usually well worth while. From fifty to a hundred pounds of acid phosphate to the ton of yard manure will often improve the yields wonderfully, and without excessive cost. Truckers frequently use nitrate of soda as a top dressing, even when manure has been applied generously, but you have the poultry manure to use for this purpose.

Mix Two Together

Considering the character of the crops you plan to grow, I think that all the manure you use could be safely plowed under, in spite of the fact that it is usually said that chicken manure should be worked into the top soil. If you were growing cabbage, celery, cauliflower, and other leafy crops, then the chicken manure might have to be put on top.

As you are situated, I would recommend that you mix the poultry manure with your yard manure and apply them at one time. I have known good crops of potatoes to be grown with poultry manure mixed in the row like fertilizer. Since you would need to mix some acid phosphate with it first, to be sure of a good crop, the trouble would be considerable if you adopt this plan.

When you are making your pumpkin hills, if you have not previously mixed acid phosphate with the manure, it may be worth while to use half a handful to each large hill. You can expect a good crop without the phosphate, but the chances of getting a better one with the phosphate are too good to miss, since the cost is little.

I have been over some of the farms in the valleys near your town, and if your land is as level as some I have seen, you are to be congratulated.—W. C. Pelton.

They're Discussing a Lettuce Crop

Mr. James Ryder, of Milford, Del., at the right, is the owner of this fine crop. His neighbor came across to "talk it over."

Bob was sitting on the sofa with his friend Dot. On her knee was her little niece. The door of the next room was wide open, and the family, as usual, were listening. This is what they heard:

"Kiss me, too, Aunt Dottie."

"Certainly, dear, but don't say two, say twice; too is not good grammar."

Burpee's Seeds Grow

Burpee's Annual for 1925 "SEEDS THAT GROW" W. Atlee Burpee Co.

Burpee's Annual
The Leading American Seed Catalog

This is the catalog that tells the plain truth about the Best Seeds That Grow. It describes the **Burpee Quality Seeds.**

Market growers and florists use Burpee's Annual as a reference book, and still it is so interesting and easy to read that a million amateurs use it as their garden guide. Burpee's Annual is the most popular seed catalog in the world.

Burpee's Annual is FREE

Every variety of seed offered in Burpee's Annual is grown on the Burpee Seed Farms, or by our experienced growers in other parts of the world. Each variety of seed is grown where it matures most nearly to perfection. And all seed sold by Burpee is tested twice in our famous Fordhook Trial Grounds. Burpee's Seeds are Tested and Guaranteed.

If you are interested in gardening Burpee's Annual will be mailed to you free. We want you to sow Burpee's Seeds.

FREE SAMPLE
First write for a copy of Burpee's Annual; then look through the book and select a regular 10c packet of any vegetable or flower seed entirely free, and we will mail it to you postpaid. *This free offer is made to get new customers for Burpee's Seeds and is good only until May 1, 1925*

Those Potato Prices

(Continued from page 3)

The size of the southern crop each year, and the time at which it is shipped to compete with the last third or quarter of the northern crop depends mainly upon the weather of winter. Planting begins in December in Florida, in January in Georgia and South Carolina. By February the great production section of Virginia and North Carolina around Norfolk is putting in the crop which in some fortunate seasons has grown close to 20,000,000 bushels. Should a mild winter follow, the potato vines will grow fast, with no setbacks, and a heavy yield will be shipped early, some cars even in February.

But this early crop is peculiarly at the mercy of cold waves, such as we had this fall about November 15 and December 20. Freezing temperatures in the South cut the tender vines down to the ground. If they manage to come on again and grow, the date of shipping the crop is set back for weeks. The 1920 crop only furnished a few cars until after May first, and this was a great factor in sending the price of the latter end of the 1919 crop to $4.00 per bushel to many growers. The southern grower can never feel safe till after Easter is well past.

It is a familiar fact to every city potato dealer that cold weather makes people there eat more potatoes, and warm weather cuts down the consumption. So a cold winter raises potato prices in three ways: By holding back the early crop, by the losses and delays in transit by rail from distant shipping sections, and by making consumers feel like eating more.

Starvation Prices in the South

Last winter was mild in the South. The cold wave never quite reached important potato growing regions. This resulted in the biggest crop on record. No less than 49,743 cars were reported shipped by the railroads from the early-crop states, compared with 33,315 cars one year before. The crop of the southern states is estimated at no less than 77,707,000 bushels, breaking the previous southern record of 1920 by over 9,000,000 bushels; it is over 11,000,000 bushels more than the big crop of two years ago.

Prices in the South fell very low, and it was even reported that some were never dug, as no one would pay enough to cover the cost of digging and shipping. As is well known, the climate of the South is too hot to allow potatoes to be dug and stored for later shipment. They must go at once, no matter how low the price. All the way up to Long Island each potato section found potato prices very low when it was ready to dig. Early potatoes sold in the cities at the lowest price for years. Dealers and consumers alike became used to the idea that potatoes must keep right on being low, even thru the fall, winter and spring.

(To be continued next week)

Tomato Test Results

AS THE result of a tomato variety test which was conducted on Will Abel's farm near Willock, Allegheny County, Penn State Earliana and Matchum tomatoes were again shown to be valuable early and second early varieties, according to W. B. Nissley, vegetable gardening extension specialist of Pennsylvania State College.

The Matchum variety ranked highest in yield, followed closely by one strain of Bonny Best, while Penn State Earliana was tied with Ponderosa, a late variety, for fourth place.

KILL ROSY APHIS!

Safeguard next year's crop *with one spray*

You can protect your trees and fruit from injury later on with one thorough spray before the foliage appears—and for less money by using Sunoco Spray Oil.

Sunoco Spray Oil emulsifies perfectly with ordinary water; no heating necessary; just a good, vigorous stirring. It stays mixed—will not separate; non-poisonous and non-irritating.

An emulsion of Sunoco is cheaper than lime-sulphur and nicotine.

SUNOCO
SELF-EMULSIFYING
SPRAY OIL

In addition to killing aphis and their eggs, you can kill Scale, Red Mite and Apple Red Bug with only one thorough application of Sunoco, as a late dormant spray.

Don't wait until these pests have multiplied and foliage and fruit are injured. Control them before any foliage appears and insure a clean, profitable yield of fruit next year.

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

The Keystone Fruit Growers' Round Table

(Continued from last week)

LEHIGH COUNTY fruit growers are finding roadside markets a profitable method of selling fruit, it was brought out during Horticulture Week at State College. J. E. Linde, of Orefield, sold $30,000 worth of fruit and other farm products in 1923 at the roadside and $25,000 worth in 1924. He uses only two sizes of baskets, four-quart and sixteen-quart. Peaches are packed in the four-quart basket, and sold at forty to seventy-five cents a basket, the latter price being received for J. H. Hale peaches, six or seven to the basket. The four-quart basket fits the automobile trade best, both for apples and peaches.

Erie County fruit growers, on the other hand, have developed a distinctive package, the twelve-quart splint basket with square end. It is use for all fruits.

G. F. Reiter, of Allegheny County, uses four, eight, sixteen and 32-quart baskets, but most of the eight-quart size. The principal point seems to be to use the largest package that the local trade will take.

J. A. Runk, of Huntingdon, emphasized the saving that may be effected by local market growers if they buy back all good used baskets. He pays ten cents for the bushels and five cents for the half bushels.

The Weight of Apples

Considerable discussion was aroused over the Pennsylvania legal weight of a bushel of apples, which was raised from forty-five to forty-eight pounds by the last legislature. Porter R. Taylor, Director of the State Bureau of Markets, reported the actual weights of 1079 bushels of different varieties taken in December, 1923, when they may have shrunk a little. The range was from forty-five to fifty-one pounds, most of them being between forty-five and forty-seven pounds.

The average weight of the 1079 bushels was 46.47 pounds. The lightest varieties were Ben Davis and Stark. The Bureau of Markets will advocate in the next legislature that the legal weight be reduced to forty-five pounds. It can readily be seen, however, that no figure for all varieties is fair or practicable; the best way is to fill the package, regardless of the variety, and base the price on what it weighs.

Storage Problems

The discussions of bank cellar storage were particularly interesting. L. M. Marble, of Canton, prefers tile or masonry construction to concrete, because concrete is drying; if the floor is dirt, this is not a serious disadvantage, and concrete construction is likely to be most practicable on many farms.

If converting the cellar of a bank barn into a storage, a cement floor above, or two inches of compressed cork, may be used to insulate the ceiling. Some have been successful in the use of straw stuffed between the ceiling joists. If rats are troublesome in a dirt floor cellar, cover the entire floor with one-half-inch mesh wire, and screen doors, windows and ventilators.

Mr. Marble believes that Pennsylvania growers can practically disregard the problem of humidity in a bank cellar of any type, provided the apples are mature and well blushed, so that the protective waxy covering of the skin is well developed and preserved. Apples in storage should always be kept dry—hence the necessity for frequent ventilation, even when not needed to control temperature.

New Factors Have Appeared

Mr. Marble showed that the cost of wholesale marketing has increased beyond all reason in recent years, with an increasing number of middlemen and distributors, so that the carlot grower often finds that after all the deductions have been made there is little left for him. This method of marketing is built around railroad transportation. Two new factors have entered into the situation in recent years—good roads and motor trucks.

Truck hauls of fifty to ninety miles are now not at all uncommon. It is even coming to the point that prices in some of the larger cities, Pittsburgh for example, are being determined as much by truck shippers as by carlot shippers. Storage on the farm is as necessary a factor in this new method of marketing as good roads and motor trucks and we may expect a marked increase of interest in this subject thruout the state during the next few years.

Storage Ventilation Experiments

The storage management discussion, led by R. D. Anthony, brought out the point that the more ventilation in a bank cellar storage the better; a constant change of air is desirable, not to change the temperature, but to keep the fruit dry and remove the products of decay or ripening. This constant ventilation will not cause the fruit to shrivel if it is mature and well colored, so that the waxy covering is well developed. A humidity of sixty-five to eighty-five degrees is desirable.

In a bank cellar the ground temperature controls the storage temperature. On August 24, 1924, at the Marble Laboratory, the outside air temperature was eighty-four degrees at 8:00 A. M., while the ground temperature was fifty-four degrees and the cellar temperature fifty-nine degrees. The cellar was ventilated with this hot air, which changed from eighty-four to sixty degrees within three feet after it entered the cellar. Even when this hot air was pushed into the cellar with a fifteen-inch fan, in a steady draft, the cellar temperature remained fifty-nine to sixty degrees.

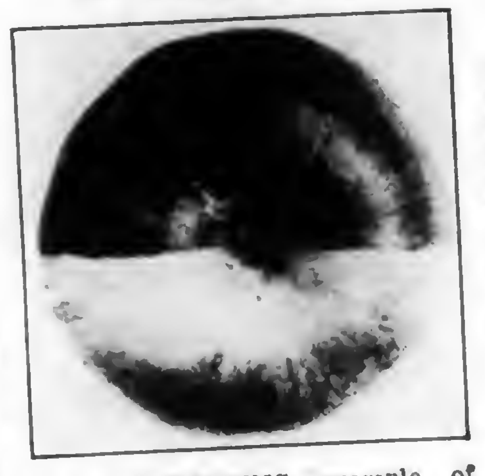
A reverse experiment was conducted on November 15, 1924, when outside air at a temperature of nineteen was pushed into the cellar with an electric driven fan, making six complete air changes an hour. The air entered the cellar thru ducts thirty feet in length under the floor of the cellar, and eight feet from the surface of the ground. It entered these ducts at nineteen degrees; it came out into the cellar at thirty-eight degrees. This shows that nothing we can do in the way of ventilation can change the temperature of an ordinary bank cellar from that determined by the temperature of the surrounding soil.

The New Way Better

The old method was to ventilate bank cellars only on cold nights and close them on warm days. This is not the right way. Ventilation should be given at least two hours every day, whether warm or cold, but it will be necessary to temper the outside air entering the cellar on very cold days.

According to N. S. Grubbs, who supervised the building of the State College storage cellars, the present cost of erecting a concrete storage is from thirty cents to one dollar a bushel capacity, according to the cheapness of labor and the amount of building material to be obtained on the farm. The average is around forty-five cents a bushel.—S. W. Fletcher.

A Strange Apple



AN INTERESTING example of "chimera" in the apple. One-half of the apple is solid red, the remainder is striped. This is due to bud variation, not to the influence of pollen from another variety.

Training Grape Vines

THE method of training grapes has a marked effect on the bearing habits of the vines. The newly recruited army of amateur grape-growers will need to use special discretion in their pruning practices if their efforts are to be rewarded with bountiful crops.

For the average eastern commercial vineyard growing vigorous varieties like the Concord and Niagara, the four-arm system of pruning has proved best.

Under this system a two-wire trellis, with the top wire five and one-half to six and one-half feet high and the bottom wire two to three feet below is erected. A single trunk is run up to the top wire, and a single new cane run along each wire in each direction from the trunk, making four new canes in all. The canes on the top wire are cut back to ten to fifteen buds each, while those on the bottom wire each carry two or three fewer buds, or nodes, than the top canes.

Selection of Canes Important

A vigorous, mature vine on good soil may carry a total of thirty-two to fifty buds.

The selection of the canes is important. Bright, strong canes about as big as a lead pencil and carrying twenty or more buds are preferred. It has been determined by experiment in Maryland that only the first fifty or sixty per cent of the buds on each cane are fruitful, regardless of the length of the cane. In other words, the buds nearer the tip of the cane are not fruitful. Therefore, the canes chosen should be of sufficient length so that forty to fifty per cent of the buds can be removed, still leaving the number of buds desired for the vine. Bull canes,—large, rank-growing canes one-half inch or more in diameter,—should always be removed.—N. J. Extension Circular.

Propose Marketing Board

AMONG the measures recently introduced into Congress is Senate Bill Number 3719 which provides for the creation of a federal marketing board. It was introduced by Senator Capper. The duties of the proposed federal marketing board, as set forth in the bill, are to encourage and aid in the formation of co-operative marketing, clearing-house and terminal marketing associations handling agricultural products; to correlate the activities of such associations and to develop efficient and economical methods of distributing and marketing such products.—W.

Bigger Yield Bigger Profits with EMLONG'S Strawberry Plants

$1500 per Acre Yield

Mrs. F. Maitland received $1500 from an acre of Emlong's Blue Ribbon Strawberries last year. *100* Emlong Plants brought E. W. Moele, of Minn., $65. $1000 per acre is usual for growers who keep to our plants. *You can do as well!* Plants we send you will be *of same strain as those above.*

New Tomato, the "Cortland"
Liberal Sized Packet Mailed
FREE
MAIL COUPON BELOW

"Cortland" Tomato plant had 22 big tomatoes all ripe at one time.

"CORTLAND" TOMATO: The earliest, biggest yielding, largest, rich red, smoothest, early tomato so far introduced. Bears longer than any other early tomato. The best early tomato for market gardeners or the home garden.

We have such abounding faith in our new tomato, the "CORTLAND" that, in order to quickly introduce it, we will send a liberal sized packet FREE to every one who will mail the coupon below.

Our new 28th Annual Catalog illustrates and describes all the new and old standard varieties of garden, field and flower seeds, sold at honest prices. It is chock full of varieties that will germinate and yield big crops for you. Sent free with packet to all filling out coupon below. Here are a few:

"Wonder" Golden Bantam Sweet Corn. Earlier, bigger ears and bigger yielder. Delicious quality.

Ebenezer or Japanese Onion Sets. Actually doubles yield of any onion sets on market. Does not run to seed when quite large sets are planted. Flesh is white, firm and of delicate flavor. The best keeping onion we know of.

"King of of Denmark" Spinach. The new miracle spinach; simply will not run to seed.

Saving by Spending

You can actually save money this year by ordering an "Acme" Coulter Harrow. First of all, you save time and labor in preparing your fields for the spring planting.

More important still, you save the waste of seed and fertilizer by giving every seed a fine, moist, mellow soil in which to sprout and grow. You save the difference between fair crops and full crops. At the end of the season, you will have saved far more than the price of an "Acme" Coulter Harrow, and your Harrow is still good for many years.

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

The Poultryman's Sunday—How Much Shall He Do?

POULTRYMEN do not face as great a temptation to do Sunday business with private customers as the truck or fruit grower. I find that my leading products consisting of fresh eggs and poultry meat are not quickly perishable. They have a cash value on Monday or Tuesday so there is no hurry to sell them on Sunday.

However, poultry management requires a lot of detail work and I find that enjoyment of Sunday requires planning during the last of the week, especially on Friday or Saturday. It pays to fill the dry mash hoppers the last of the week and to be sure that they will last over Sunday. The same is true of the oyster shell and grit hoppers.

I have even stopped scraping the dropping boards Sunday. Monday morning they are given a thoro scraping and sweeping and are ready for another week of regular scraping. I have not found that neglect on one day of the week greatly increases our problems of poultry house sanitation.

Plan Hatching Dates

There is so much Sunday work that must be done, especially in the spring during hatching and brooding season, that it never pays to neglect a single job until Sunday if that work can be done on another day. I always start my incubators on Tuesday morning. Three weeks later the hatch is beginning on Monday. During the first of the week the chicks are removed and placed in our brooders or sold.

Some poultrymen put up a sign, "No Visitors to the Poultry Plant on Sunday." It saves them a lot of useless work and talking. If this is not done some poultry plants will be pestered by the Sunday visitor who thinks a poultry farm is a zoo for the delight of the public. Some of them like to go thru all the houses and ask questions. It compels the poultryman to give free illustrated lectures on a day when rest, church and pleasant visits with friends should be in order.

Not Worth the Extra Effort

I cannot think of a farmer or poultryman who has made any great gain thru unnecessary Sunday work. I know of several who have become thoroly sick of farming after wearing themselves out on the seven-day-a-week schedule until they hated the business.

On the few Sundays that various complications and unexpected work with brooder fires have kept me busy all day I have always made up for it the next week. On Monday I feel stale and lacking in the pep that makes the business move along at its best. By the time I get back in the regular swing I have lost everything that has been gained.

Sunday Work a Devitalizer

My future schedule for Sunday is going to be based on the necessary jobs of milking, feeding hens and cows and providing fresh water, plus the gathering of eggs. That is about a half day's job or more. I am going to try and enjoy myself the remainder of the day. Monday morning will be soon enough to dig into all the jobs that were not finished on Saturday. My private egg customers usually come from Thursday to Saturday and Sunday business by the roadside will never be necessary to clean out any surplus.—R. G. Kirby.

May Join Poultry Council

PLANS for affiliation with the newly organized National Poultry Council, formed in Chicago, this month, are being discussed by two important groups of poultrymen in New Jersey,—the New Jersey Poultry Association and the New Jersey Baby Chick Association. Special interest for Jerseymen attaches to the fact that Professor H. R. Lewis, formerly of the State Agricultural College at New Brunswick, has been selected to head up the new association, as president and general manager.

The council includes in its membership the American Farm Bureau Federation, the national and state poultry and chick associations, the national associations of incubator manufacturers, feed manufacturers and poultry, butter and egg dealers. The aims of the council are to further the interests of the poultry industry in a nation-wide program, from production to consumption of the products.

Capons of the type that usually top the market.

English Hen's Record

ENGLAND has a world record layer in a Rhode Island Red hen from Witshire County, which produced 312 eggs in 308 days. The hen laid an egg every day for forty-four weeks and on four days doubled up.

The hen was entered in egg laying trials of the county councils show, and its performance is given by the secretary as a world's record. The hen, he said, laid every day for a fortnight before the trials opened and every day after they closed until her owner took her away. This is the second contest in which the hen has been entered. In the first she laid 262 eggs in as many days.—National Republican.

10 Hens Lay 10 Eggs

Winter doesn't stop Mr. Henry's hens

Readers whose hens are not laying well during these days of high egg prices, will find much of interest in the following letter from C. D. Henry, Alverton, Pa. He says:

"I placed 10 pullets by themselves, and fed them Don Sung. The third day, my eggs increased from 3 to 9 a day. They have had Don Sung ever since and have laid continuously. Yesterday I got 10 eggs from them and am willing to make affidavit to it. Don Sung certainly gets the eggs. It has paid for itself many times over."

Don Sung, the Chinese egg laying tablets which Mr. Henry used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the Burrell-Dugger Co., 866 Allen Street, Indianapolis, Ind. Poultry raisers whose hens are not laying well, should send 50 cents for a trial package (or $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded, so it costs nothing to try. Right now is the time to start giving Don Sung to your hens, so you will have a good supply of fresh eggs all winter.

THE FOWL PLAGUE

Symptoms Which Characterize the European Pest

THE European Fowl Plague is characterized by its extremely infectious nature, rapidly progressing course, and high mortality. Conspicuous symptoms are depression and loss of appetite followed by prostration. The comb and wattles usually become purple, and sometimes swollen. Sticky exudate may paste the eyelids together, clog the nasal passages and even obstruct the wind pipe, causing labored breathing. A greenish yellow diarrhea may be present.

Autopsy Findings

The nasal passage, larynx and windpipe contain some mucous exudate. Blood-stained patches and sometimes blood clots are found in the windpipe. The lungs are usually more or less pneumonic. A hemmorrhagic or "blood shot" condition is found on the crop and under the skin in various other parts, sometimes accompanied by a gelatinous exudate. Hemorrhagic spots on the muscle or fat of the heart, on the gizzard fat, on the outer surface of the small intestines and especially on the inner lining of the glandular part of the stomach and gizzard are considered as diagnostic evidence of European fowl pest. Serous fluid is sometimes within the heart sac, or in other cases in the body cavity.

Treatment

Since treatment of affected birds is futile, the aim should be to prevent so far as possible the spread of infection. The first fowls showing symptoms should be destroyed by a method which would guard against the contamination of the premises. The carcasses should be burned or buried deep. The healthy fowls should be moved to new quarters if possible and carefully watched for signs of disease.

Houses and runs should be thoroly cleaned at frequent intervals and disinfected with carbolic acid in five per cent solution. The drinking water may be made antiseptic by adding one-third teaspoon of permanganate of potash to each gallon, a procedure which serves to prevent the spread of disease thru the water and also is a convenient means of administering an internal antiseptic.

Cornell Laying Mash

In a recent issue of Pennsylvania Farmer is mentioned "Cornell" mash for hens. Will you please advise me the materials of which this is composed and the proportions by weight in which they are used in mixing.—F. E. S., Bedford Co., Pa.

The dry mash commonly called the "Cornell" laying mash is composed of 100 pounds each of bran, corn meal, wheat middlings, ground oats and meat scrap and three pounds of salt. One hundred pounds of ground barley is sometimes substituted for the ground oats. The salt should be fine table salt so it will be easy to work thoroly into the mash.

This is a mash that is easy to make because of the small number of ingredients and home-grown corn and oats can often be included. If plenty of sour milk is available it is best to cut the amount of meat scrap in two. As the meat scrap is usually the most expensive item in the ration, the use of the sour milk cuts down the cost per 100 pounds of mash.

I am using this Cornell home made mash in all my poultry houses at present and it is giving fine results. The last bin I made up cost me $2.54 per 100 pounds, plus the labor. I would have had to pay close to $3.75 per 100 pounds for high grade commercial laying mash.—R. G. Kirby.

BROOKFIELD
Champion Laying
Business Breeds

Are World's Champion Layers. Imported direct from England. Brookfield baby chicks bred from 1200 of these specially culled, heavy laying hens—fully accredited, trapnested Tom Barron and Tancred S. C. Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

Double *your* Milk Profit—
by building Health and Vigor

Did you ever think how little added milk it would take to actually double your net milk profit?

Competent authorities agree that on the average, only 10% added yield would double the net return from dairying.

See what a chance you have, then, to realize real profits by giving more thought to safe ways of increasing the milk flow.

Make Cows Thrive on Winter Feeds

The *Kow-Kare* way is safe, reliable and sure. *Kow-Kare* is not a stock food. It is a medicine-tonic that invigorates the milk-making organs. It enables the cow to assimilate the rough, dry winter feeds with the same ease and milk-making effect as these same organs, unassisted can handle green pasturage in summer.

Kow-Kare is scientifically designed to act directly on the digestive and genital organs. It not only stimulates, but builds natural, permanent vigor into the organs that control the milk yield. A tablespoonful twice a day, one week out of each month is the usual feeding of *Kow-Kare*. Once tried, you are sure to become a regular user of this great invigorator.

Feed dealers, general stores and druggists sell *Kow-Kare*—in $1.25 and 65c sizes. Order direct if your dealer is not supplied.

Montgomery's Holstein Bull Association

By A. L. Beam

THE Montgomery Holstein Bull Association held a very successful meeting in December at which S. J. Brownell, State College extension specialist, gave an interesting report of the progress of the Association up to the present time. An unusual feature of the meeting was the showing of the film "Weighed in the Balance," which depicts the saving of a valuable dairy cow from the butcher's block. This was the first public showing of the film produced by the United States Bureau of Dairying.

The outstanding points in the annual report dealt with the improvement resulting from the use of purebred sires in herds which had been tested for tuberculosis.

When the Montgomery Bull Association was organized in 1919 by A. K. Rothenberger, of Center Point, who was then county agent, only two or three herds had been given the tuberculin test. In 1920 the Association passed a resolution requiring all members who used Association bulls to have their herds tested for tuberculosis. The progress made by the twenty-six active members of the Association since the resolutions went into effect has more than compensated for the losses caused by the reaction of animals to the tuberculin test.

The primary purpose for which a bull association is formed is to bring about an increase in the number of really productive milk cows of good conformation. This object is being attained rapidly in the Montgomery Association. One example is found in the performance of the first three daughters of one of the Association bulls to freshen. Each one of these three half-sisters, owned by Wm. H. Landis, of East Greenville, won blue ribbons on the show circuit last fall. One was given first place at the Doylestown Fair, another at Quakertown, and the third at the Allentown Fair. At each fair different judges awarded the ribbons.

In the get-of-sire class, one of the most coveted winnings of each show, this group sired by an Association bull won fourth at Trenton in an exceptionally strong class of ten entries, and first at Allentown. They have performed equally as well in production.

A second object which the members of the Montgomery Association are attaining is the adoption of a community breeding plan which opposes the admixture of the different breeds and the use of cross bred, grade, and scrub sires. To one who has watched the progress of the Association, the herds of typically marked animals is just another indication of successful co-operation when all members have a definite object in view.

An increase of 570 per cent in the number of purebred Holsteins in the herds of the twenty-six active members is largely due to the use of the jointly-owned purebred sires. This increase is very noticeable when comparison is made with the small increase in the number of purebreds among the non-active members. This increase is more than in numbers alone. Since the organization in 1919, 141 purebred and eighty-six grade heifer calves have been sired by Association bulls in six blocks.

These purebreds have been inventoried at a conservative increase of $30.00 per head and the grade heifers of $10.00 per head over similar animals in the county because of their well bred sires. This means an increase in valuation of $5090 which, coupled with the value of increased milk production of the daughters over their dams, amounts to a little over $22,000.00.

Realizing the many advantages to be gained in securing records on the daughters of the Association-owned bulls, fourteen of the twenty-six bull Association members were instrumental in organizing a cow testing association with the aid of County Agent R. G. Waltz. This gives them a check on the prepotency of their purebred sires and also a record of each animal as she freshens.

Champion judging team of Glassboro, New Jersey, public schools.

Glassboro's Team

THE picture on this page shows the team which won the Grand Championship award for best judging in all classes at the annual statewide interscholastic judging contests at New Brunswick, New Jersey, last fall. This team represented the Glassboro, Gloucester County, High School. It tied for first place in apple judging, was first in the judging of Holsteins and Jerseys, and placed third in the swine judging contests. This is the second year for the Glassboro team to win first honors in the annual contest.

The boys in the picture are: Lower row—Wallace Coates, Errol Adams and Louis Harmer.

Second row—Geo. Duffield, Geo. McCulloch, French Gaut, Sydney Seymour, Jno. Dougherty and Ray Ballinger.

Back row—R. E. Culbertson, Director of Agriculture and coach of the team, Curtis Sunniman, Edward Colson, Edwin Sherwin and Joseph Murphy.

Why There Is a Surplus

OF ALL the problems confronting the dairy industry, none presents greater obstacles and at the same time offers wider opportunities, than the elimination of the poor producing cow. The present surplus of dairy products now in storage, for the most part, can be laid at her door.

During the past eighteen months, dairying has occupied a unique position. According to figures published by the Bureau of Economics at Washington, dairy products, when compared with the pre-war period, commanded higher prices than many of the other farm products.

"Mushroom Dairying"

These prices induced farmers who had never previously engaged in the dairy business to any extent to purchase a few cows. In many instances the animals purchased were those weeded out of dairy herds. In other cases they were cows which had nursed one or two calves during the year and then stood dry until freshening again. The majority of this "mushroom" type of dairy cow freshens in the spring, milks five or six months, and then goes dry until the following spring. This increased production is thrown on the market during the summer season and helps produce a storage surplus.

The dairyman must also assume his share of responsibility in this matter. Many herds have not been culled as closely as they otherwise would, had prices been less attractive. Now, with corn higher than one year ago, and butterfat prices lower, the low producing cow must go.—G. A. Williams, Purdue University.

Lancaster Cow Leads

A GRADE Holstein in the Garden Spot Cow Testing Association, Lancaster County, owned by Abraham Herr, took first place among the 9347 cows tested in twenty-nine Pennsylvania associations in November, with a production of 95.7 pounds of butterfat, according to C. R. Gearhart, State College extension specialist.

A purebred Holstein in the Montour Valley Association, Allegheny County, owned by A. B. Craig, ranked second with 90.4 pounds of butterfat.

Two other purebred Holsteins tied for the third place with 86.7 pounds. These are owned by Charles Chaffee, a member of the Laurel Hill Association in Bradford County, and by T. L. McCarrell, of the Washington County Association. Another of McCarrell's Holsteins was highest in milk production for November with 2409 pounds, followed closely by a registered Holstein owned by I. V. Otto, Carlisle, with 2375 pounds of milk.—A. L. Beam.

Cut Milk Production Costs with a New Harder Silo

Twelve ordinary grade cows at the Illinois Experiment Station averaged 8,313 lbs. milk in one year, without grain. They were fed on silage and alfalfa. Prof. Savage advises Eastern dairymen to cut production costs by growing more silage and legumes and buying fewer concentrates.

In order to help carry out this money-saving, profit-making plan, we offer the improved Harder Silo with the patented Harder-Victor Front on very easy terms. After a small first payment, your cows will take care of the remaining payments through greater production and lower feed cost. You simply cannot afford to go without a silo when you can get a genuine Harder on such easy terms. Even if you have one silo, you probably need another.

Let Us Send You "Saving with Silos"

We haven't room here to explain all the good points of this strictly high-grade Silo, but we'll gladly send you "Saving with Silos", *free*. It explains the scientific principles of silage making and illustrates the details of Harder construction. Ask also for particulars of our easy-payment plan that makes a Harder pay for itself.

Grade Cows or Grand Champions

Whether you are developing Grand Champions, keeping pure bred or grade cows for milk, cream or butter production, the following letter from Atamannsit Farms will interest you. It brings out three important points in dairying all tending to greater profit for the man who keeps cows, i. e.

Developing better young stock—
Producing more milk—
Feeding test cows for higher records.

Atamannsit Farms, East Falmouth, Mass.
November 15, 1924

The Quaker Oats Co., Chicago, Ill.

Dear Sirs—In regard to the Sugared Schumacher I must say the results from its use are very gratifying. I admire its remarkable palatability. In a herd as large as Atamannsit there would usually be several animals that do not care for a feed but I have yet to see one that is not keen for Sugared Schumacher. We have 30 yearly heifers, which due to the very dry weather, came in from pasture quite thin this fall. We have fed them Sugared Schumacher alone with silage and clover hay and the way they have picked up is a splendid testimonial to your feed—much better than I could write.

We have used Sugared Schumacher according to your directions for our milking herd and it has proven to be more satisfactory than any other feed we have used. It is the last three months on a test cow's record that count. They are pretty well filled up then and they must relish their feed or they will not keep going. For that reason I think Sugared Schumacher is the ideal carbohydrate basis for the test ration as it keeps the cows at maximum production right to the end of the test period.

—Yours very truly, HORACE M. CLARK, Herdsman in charge.

There are Many Good Reasons Why Sugared Schumacher Feed Produces Such Gratifying Results. Mr. Clark Touches on Three of Them:

FIRST the way the 30 heifers "picked up" in flesh and vigor—a result of the right kind of carbohydrates which puts animals in tip top condition.

SECOND the way the "milking herd" proved it to be "more satisfactory than any other we have used"—showing that it meets the need of the milch cow ideally and helps her to produce MORE MILK.

THIRD its great PALATIBILITY as proved on their test cows by keeping them EATING with relish and up to maximum production right to the end of the test period.

Surely these ARE sufficient reasons for any owner of cows—grade or grand champions to decide to try Sugared Schumacher Feed. But these are not all. It keeps cows healthy—satisfied and in good flesh. It is an ideal maintenance ration and when fed with Boss Dairy Ration with its 24% protein content, or any other good protein concentrate, you have a ration which day in and year out is the most economical and profitable from every standpoint. Also fine for hogs, horses, sheep and cattle. A hint to the wise—try it. Your dealer can supply you, if not, write us.

You wouldn't stand for *this* One Minute

If some one scraped the butter left over from your table into the garbage can after each meal you certainly would put a stop to it immediately.

Left-over butter must be saved for another meal, but how about the "left-over" butter-fat which your present separator leaves in the skim-milk? It isn't at all unusual for a new De Laval to increase the yield of butter-fat from the milk of just a few cows by a quarter to a pound or more a day. Think what this would mean to you in the course of a year.

The new De Laval is the best cream separator ever made—skims cleaner, runs easier and lasts longer. Among other new features and refinements it has a self-centering bowl which eliminates vibration, causing it to run smoother and easier. It gives you a rich, smooth, high-testing cream, and skims cleaner under all conditions of use.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

The Story Thus Far

BART BAYNES was an orphan who lived on a farm in Lickitysplit with his Aunt Deel and Uncle Peabody Baynes. Aunt Deel was a little beyond forty, jealously devoted to her brother, Uncle Peabody.

In 1831, when the story opens, Bart was a small lad of seven who was always getting into trouble, worrying his maiden aunt and bachelor uncle unmercifully. One day during that year Bart had his first glimpse of the Silent Woman—Rovin' Kate—who told his fortune. Tho he must encounter four great perils he would be strong and the friend of many people.

Early in his career Bart found a friend in the Comptroller of Canton Village, Silas Wright. The great man became much interested in the child and sent him books—a treasure indeed in that unread household. Not long after this Mr. Wright was elected to the United States Senate.

With 1837 came evil days. Wild speculation in land and the American paper-money system brought rough going. New York banks suspended payment on notes. There was little money. Uncle Peabody had signed a note for his cousin, Rodney Barnes, sometime before, and was afraid he would have to pay it. One autumn day Uncle Peabody traded three sheep and twenty bushels of wheat for a cook stove. Barnes came out from Canton with him to set up the stove and stayed for supper.

Continued

MR. BARNES put down the iron, picked up the poker and tried its strength on his knee as he told how he heard that it was a growing country near the great water highway of the St. Lawrence. Prosperous towns were building up in it. There were going to be great cities in northern New York. What they called a railroad was coming. There were rich stores of lead and iron in the rocks. Mr. Barnes had bought two hundred acres at ten dollars an acre. He had to pay a fee of five per cent to Grimshaw's lawyer for the survey and the papers. This left him owing fourteen hundred dollars on his farm—much more than it was worth. One hundred acres of the land had been roughly cleared by Grimshaw and a former tenant. The latter had toiled and struggled and paid tribute and given up.

Our cousin twisted the poker in his great hands until it squeaked as he stood before my uncle and said:

"My wife and I have chopped and burnt and pried and hauled rocks an' shoveled dung an' milked an' churned until we are worn out. For almost twenty years we've been workin' days an' nights an' Sundays. My mortgage was over-due. I owed six hundred dollars on it. I thought it all over one day an' went up to Grimshaw's an' took him by the back of the neck and shook him. He said he would drive me out o' the country. He gave me six months to pay up. I had to pay or lose the land. I got the money on the note that you signed over in Potsdam. Nobody in Canton would 'a' dared to lend it to me."

The poker broke and he threw the pieces under the stove.

"Why?" my uncle asked.

Mr. Barnes got hold of another stick of wood and went on.

"'Fraid o' Grimshaw. He didn't want me to be able to pay it. The place is worth more than six hundred dollars now—that's the reason. I intended to cut some timber an' haul it to the village this winter so I could pay part o' the note an' git more time as I told ye, but the roads have been so bad I couldn't do any haulin'."

My uncle went and took a drink at the water pail. I saw by his face that he was unusually wrought up.

"My heavens an' earth!" he exclaimed as he sat down again.

"It's the brain colic," I said to myself as I looked at him.

Mr. Barnes seemed to have it also.

"Too much note," I whispered.

"I'm awful sorry, but I've done everything I could," said Mr. Barnes. "Ain't there somebody that'll take another mortgage?—it ought to be safe now," my uncle suggested.

"Money is so tight it can't be done. The bank has got all the money an' Grimshaw owns the bank. I've tried and tried, but I'll make you safe. I'll give you a mortgage until I can turn 'round."

So I saw how Rodney Barnes, like other settlers in Lickitysplit, had gone into bondage to the landlord.

"How much do you owe on this place?" Barnes asked.

"Seven hundred an' fifty dollars," said my uncle.

"Is it due?"

"It's been due a year an' if I have to pay that note I'll be short my interest."

"God o' Israel! I'm scairt," said Barnes.

Down crashed the stick of wood into the box.

"What about?"

Mr. Barnes tackled a nail that stuck out of the woodwork and tried to pull it between his thumb and finger while I watched the process with growing interest.

The home of Mr. and Mrs. William Wheaton and their four daughters in Cumberland County, New Jersey.

"It would be like him to put the screws on you now," he grunted, pulling at the nail. "You've got between him an' his prey. You've taken the mouse away from the cat."

I REMEMBER the little panic that fell on us then. I could see tears in the eyes of Aunt Deel as she sat with her head leaning wearily on her hand.

"If he does I'll do all I can," said Barnes, "whatever I've got will be yours."

The nail came out of the wall.

"I had enough saved to pay off the mortgage," my uncle answered. "I suppose it'll have to go for the note."

Mr. Barnes' head was up among the dried apples on the ceiling. A movement of his hand broke a string of them. Then he dropped his huge bulk into a chair which crashed to the floor beneath him. He rose blushing and said:

"I guess I better go or I'll break everything you've got here. I kind o' feel that way."

Rodney Barnes left us.

I remember how Uncle Peabody stood in the middle of the floor and whistled the merriest tune he knew.

"Stand right up here," he called in his most cheerful tone. "Stand right up here before me, both o' ye."

I got Aunt Deel by the hand and led her toward my uncle. We stood facing him. "Stand straighter," he demanded. "Now altogether. One, two, three, ready, sing."

He beat time with his hand in imitation of the singing master at the schoolhouse and we joined him in singing an old tune which began: "O keep my heart from sadness, God."

This irresistible spirit of the man bridged a bad hour and got us off to bed in fairly good condition.

A FEW days later the note came due and its owner insisted upon full payment. There was such a clamor for money those days! I remember that my aunt had sixty dollars which she had saved, little by little, by selling eggs and chickens. She had planned to use it to buy a tombstone for her mother and father—a long-cherished ambition. My uncle needed the most of it to help pay the note. We drove to Potsdam on that sad errand and what a time we had getting there and back in deep mud and sand and jolting over corduroys!

"Bart," my uncle said the next evening, as I took down the book to read. "I guess we'd better talk things over a little tonight. These are hard times. If we can find anybody with money enough to buy 'em I dunno but we better sell the sheep."

"If you hadn't been a fool," my aunt exclaimed with a look of great distress—"ayes! if you hadn't been a fool."

"I'm just what I be an' I ain't so big a fool that I need to be reminded of it," said my uncle.

"I'll stay at home an' work," I proposed bravely.

"You ain't old enough for that," sighed Aunt Deel.

"I want to keep you in school," said Uncle Peabody, who sat making a splint broom.

While we were talking in walked Benjamin Grimshaw—the rich man of the hills. He didn't stop to knock but walked right in as if the house were his own. It was common gossip that he held a mortgage on every acre of the countryside. I had never liked him, for he was a stern-eyed man who was always scolding somebody, and I had not forgotten what his son had said of him.

"Good night!" he exclaimed curtly, as he sat down and set his cane between his feet and rested his hands upon it. He spoke hoarsely and I remember the curious notion came to me that he looked like our old ram. The stern and rugged face of Mr. Grimshaw and the rusty gray of his homespun and the hoarseness of his tone had suggested this thought to me. The long silvered tufts above his keen, gray eyes moved a little as he looked at my uncle. There were deep lines upon his cheeks and chin and forehead. He wore a thin, gray beard under his chin. His mouth was shut tight in a long line curving downward a little at the ends. My uncle used to say that his mouth was made to keep his thoughts from leaking and going to waste. He had a big body, a big chin, a big mouth, a big nose and big ears and hands. His eyes lay small in this setting of bigness.

"Why, Mr. Grimshaw, it's years since you've been in our house—ayes!" said Aunt Deel.

"I suppose it is," he answered rather sharply. "I don't have much time to get around. I have to work. There's some people seem to be able to git along without it."

He drew in his breath quickly and with a hissing sound after every sentence.

"How are your folks?" my aunt asked.

"So's to eat their allowance—there's never any trouble about that," said Mr. Grimshaw. "I see you've got one o' these newfangled stoves," he added as he looked it over. "Huh! Rich folks can have anything they want."

Uncle Peabody had sat splintering the long stick of yellow birch. I observed that the jackknife trembled in his hand. His tone had a touch of unnaturalness, proceeding no doubt from his fear of the man before him, as he said:

"When I bought that stove I felt richer than I do now. I had almost enough to settle with you up to date, but I signed a note for a friend and had to pay it."

"Ayuh! I suppose so," Grimshaw answered in a tone of bitter irony which cut me like a knife-blade, young as I was. "What business have you signin' notes an' givin' away money which ain't yours to give—I'd like to know? What business have you actin' like a rich man when you can't pay yer honest debts? I'd like to know that, too?"

"If I've ever acted like a rich man it's been when I wa'n't lookin'," said Uncle Peabody.

"What business have you got enlargin' yer family—takin' another mouth to feed and another body to spin for? That costs money. I ain't no objection if a man can afford it, but the money it costs ain't yours to give. It looks as if it belonged to me. You spend yer nights readin' books when ye ought to be to work an' you've scattered that kind o' foolishness all over the neighborhood. I want to tell you one thing, Baynes, you've got to pay up or git out o' here."

He raised his cane and shook it in the air as he spoke.

"Oh, I ain't no doubt o' that," said Uncle Peabody. "You'll have to have yer money—that's sure; an' you will have it if I live, every cent of it. This boy is goin' to be a great help to me—you don't know what a good boy he is and what a comfort he's been to us!"

I had understood that reference to me in Mr. Grimshaw's complaint and these words of my beloved uncle uncovered my emotions so that I put my elbow on the wood-box and leaned my head upon it and sobbed.

"I tell ye I'd rather have that boy than all the money you've got, Mr. Grimshaw," Uncle Peabody added.

MY AUNT came and patted my shoulder and said: "Sh—sh! Don't you care, Bart! You're just the same as if you was our own boy—ayes!—you be."

"I ain't goin' to be hard on ye, Baynes," said Mr. Grimshaw as he rose from his chair; "I'll give ye three months to see what you can do. I wouldn't wonder if the boy would turn out all right. He's big an' cordy

TO SOLVE this puzzle fill the white squares with letters forming the words defined in the list below. For example: 25 (reading across) is D U A L, and 32 (reading down) is M I L K. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. To remain
2. The fine meal of ground wheat
3. To snatch
4. A fermented liquor made from malted barley and hops
5. A public carriage or automobile for carrying passengers
6. Precise
7. A pronoun
8. Passed thru the air on wings
9. A female servant
10. A note of the scale
11. Illuminated

Did you ever hear this one?—

The head of a coal firm, irritated beyond endurance at a driver's blunder, told the man to go to the office and get his pay and not to come back.

"You are so confounded thick-headed you can't learn anything!" he shouted.

"Begorra," answered the driver, "I learned wan thing since I've been with ye!"

"What's that?" snapped the other.

"That sivinteen hundred make a ton."

"I have been told," said the football player to his fiancee, "that you have been engaged before; that I am not the first."

The intensity of his passion made her shudder, but she quickly recovered herself. "And is it not proper," she demanded, "before playing a match game, to try a few practice games with scrub teams?"—Boston Transcript.

"Sandy Herd," a typically economical Scotchman and an ardent golfer, had not been seen on the golf links for a long time.

Said a friend, meeting him: "Have you given up golf?"

"Aye," was the reply. "I lost my ball."—American Mutual.

Send for this Valuable Farm Account Book FREE and a Catalog of SuperZinc-ed WIRE FENCES

BEFORE you buy fence be sure to get full information about our improved Super-Zinced Fences. They are armored against rust by the heaviest coating of zinc that can be successfully applied to wire. We use a special formula of steel, and by our improved process the zinc is so closely bonded to the wire that it will not crack or peel.

Columbia Fences are made in a wide range of styles and weights for farm, poultry and garden. Their sturdy hinge-joint construction and superior rust protection establish a new standard of fence service and durability.

Our complete line includes also stiff-stay fences in farm and poultry styles, and our superb Ornamental Lawn Fences. All of our fences are Super-Zinced, are guaranteed unexcelled in quality and durability, yet cost no more than others of ordinary galvanizing quality. Send today for Super-Zinced Fence catalogue and for your copy of the Farmers' Handy Manual, a useful vest pocket book containing farm account pages and helpful farm information. Both mailed free. Send the coupon or a postal card.

Pittsburgh Steel Co.
703 Union Trust Building
Pittsburgh, Pa.

Gentlemen:
Please send me, FREE, The Farmers Handy Manual, also Super-Zinced Fence Catalog.

My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. EDWARDS

EDWARDS FARM ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer, threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

Own a Flour Mill

and make money milling the highest grade roller flour in your community on the wonderful, one-man, self-contained "Midget Marvel" Roller Flour Mill. No milling experience necessary. Easy to operate with our simple directions. Seven sizes—from 15 to 100 barrels per day. Prices from $1675 up. Write for our free book, "The Story of a Wonderful Flour Mill."
Anglo American Mill Co., 54 Kennedy Av., Owensboro, Ky.

EMPIRE WAGONS STEEL WHEELS

Low steel wheels (plain or grooved wide tires) make loading and hauling easier. Steel Wheels to fit any axle; carry any load. Make any wagon good as new. Reduced prices Catalog Free
EMPIRE Mfg. Co., Box 323 Quincy, Ill.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth:—I am thirteen years of age and live on my grandfather's farm about two miles west of New Wilmington.

I do not have many pets but I have many outdoor sports both in winter and in summer. Last summer I went camping. I had a camera and we took some interesting pictures. Our sports were swimming, hiking and canoeing. We often went to see different cities and parks on foot. The creek is not frozen solid enough to skate on yet this winter but we go sled riding and have lots of fun. I want to be your friend.—Ruth Huff, Lawrence County, Pa.

Dear Cousin Ruth and Forum Friends:—Do not think because little Greene County is off in a corner by herself, and you seldom hear from her, that all her boys and girls are asleep. I have been enjoying the Forum friends' letters ever since I could read. I am nine years old and live on a farm. We also have a town home but I like to live in the country best. My father raises more sheep than any other stock. He is teaching me how to take care of stock and I help him all I can.

A FULL WAGON
Emma Bamell, Lancaster County, Pa.

My grandpa gave me a horse and sister and I have lots of fun horseback riding. We have a dog named Kazan. We had a pretty Christmas tree and we got lots of nice presents.

Wishing Cousin Ruth and all the Forum friends a Happy New Year.—Lloyd S. Taylor, Greene County, Pa.

Dear Cousin Ruth and Forum Friends:—Christmas is over and New Years is very near. I hope we all can start in with good hopes for a happy and prosperous year.

I am a boy sixteen years old and am in the eighth grade at school. I have caught two muskrats this season. I like winter some when there is snow so that I can go sleighing. I like summer best. When those warm June days come I can get my bicycle and go a-flying down the road to the good old swimming hole where I spend my spare time kicking and paddling the warm hours away.

I have thirty-two hogs and five horses that I must feed. I have a pet dog and a pet cat. Well, boys and girls, don't you think we have a very fine Cousin Ruth to share our page with us? I think we do.

Well, boys and girls of York County, get busy and write some more letters.—Lester M. Utz, York County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve and am in the seventh grade. Christmas is over and Santa didn't forget me.

We butchered three big hogs. I help my mother with the housework and feed chickens and gather eggs. The weather is very cold and it is icy. We live on top of a ridge and it is a beautiful place to live in summer. We have a fine view of the valley. We can see all the farms in the valley, and see the farmers working in their fields.—Lena Scott, Huntingdon County, Pa.

Dear Cousin Ruth and Friends:—I call you friends, tho I have never written before.

How many of you had a delightful Christmas? I did. I received many things too numerous to name.

I live on a large farm of 235 acres. We call the farm Stanmith Poultry Farm. We raise chickens. We have at present about 3000. At times we have four and five thousand. We sell chickens, too.—Angemae West, Mongomery County, Pa.

Dear Cousin Ruth and Friends:—I am sixteen and a sophomore in Bernards High School. I live eight miles from the school but go by train. I live on a very small farm of about twenty acres. I have three sisters and one brother.

How many of the Forum friends have debating clubs in their high schools? We have two debating teams which seem to be quite victorious. We also have football and baseball teams.

Cousin Ruth, I am very glad you had your picture in Pennsylvania Farmer.—Kathleen O'Keefe, Somerset County, Pa.

Dear Cousin Ruth:—Altho I do not belong to your club, I enjoy reading the page. Would you be kind enough to tell me how to join?

I have two pets, a cat and a dog. I am nine years old. I have no brothers or sisters. Sometimes I get very lonesome.

I go to Hopewell School. I live about two miles from it. If I join I will draw a picture for you.—Dorothy Hill, Mercer County, N. J.

You have already joined our Forum now that you've written a letter to us. All those who send in any contribution to the page become members.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I hope you will excuse me for not writing as long as we have taken Pennsylvania Farmer. I am sorry that I can't send any pictures but I will send a recipe.

FUDGE CAKE

Cream together one rounding tablespoonful of butter and three-quarters cup of sugar. Add two squares of melted chocolate and one beaten egg, three-quarters cup of milk, one-quarter teaspoonful salt, one-quarter teaspoonful vanilla, one cup of flour sifted with one rounding teaspoonful of baking powder. Bake in a shallow pan.

Best wishes from one of your Forum friends.—Romane Morris, York County, Pa.

Dear Cousin Ruth:—We have been getting Pennsylvania Farmer for about a year and a half and I often thought I would like to write but I never did.

I am twelve years old and live on a farm of sixty acres. We have electric lights, running water, an electric iron and an electric washer.

I wonder how many Forum boys and girls have cameras? I got one for Christmas but I haven't used it yet.—Belinda Shafer, Lycoming County, Pa.

GOLD CAKE

½ cup butter
1½ cups sugar
4 egg yolks
1 whole egg
2½ teaspoons baking powder
2½ cups flour
½ cup milk
½ teaspoon mace or other flavoring

Cream butter and sugar. Add well beaten eggs. Beat until light. Sift baking powder with flour and add alternately with milk. Flavor. Bake in loaf tin in a moderate oven or in layers in a quick oven. Make a good sized loaf or in three layers. White of eggs may be saved to make a cocoanut cake.—Elizabeth Bell, Jefferson County, Pa.

Dear Cousin Ruth and Forum Friends:—My brother and I would like to join your Forum page. I am nine years old and my brother is seven. We have a nice Christmas tree. We received a lot of presents, also candy and nuts. We enjoy reading your page so we thought we would write.—Evelyn and Robert Spade, Fulton County, Pa.

Dear Cousin Ruth and Forum Friends:—I like your Forum page very well. I am ten years old and am in the sixth grade. I go to the Smullin School. This is my fifth year and I never missed a day and was never tardy. I have about three-quarters of a mile to go to school. We have two weeks off for vacation.—Gladys Brocious, Clarion Co., Pa.

Dear Cousin Ruth and Forum Friends:—I was eight years old the twenty-fourth of December. Some people call me a Christmas bird. New Year is coming, isn't it, Cousin Ruth? I had a nice Christmas tree.

I go to school and am in the third grade. I ride five miles in a school wagon. I have a cat and his name is Tom.—Arlene Quay, Crawford County, Pa.

Dear Cousin Ruth:—I have been reading your letters and those of your little friends for a long time. I have enjoyed them very much so at last thought I would write.

My brother and I have a dog and a cat for pets. The dog's name is Jack and the cat's name is Ruffles. When I leave school I want to train to be a nurse. My father has been very sick with the "flu" for six weeks and I have had to help take care of him as one sister is teaching school, another training for a nurse, and the other is attending normal school.—Lillian M. Dotey, Pike County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

	■	G			D	■		X		M	P	L		■		S
■	T	H		■	B		S	T	■	S		R	M		N	■
B		N	J		M		N	■	F	R		N	K	L		N

DEAR LITTLE FOLKS:—All the vowels have been left out of the words in this puzzle. The vowels, you know, are A, E, I, O, U, and sometimes W and Y.

Fill in the correct letters and you will have a wise saying of a famous American together with his name. This man did wise things as well as say them, and today is his birthday. After you have solved the puzzle you might like to look at the Picture Page where you will find this American's picture. When you have found the answer to the puzzle, send it to me on a POSTAL CARD, not later than January 24. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 259-263 SOUTH THIRD STREET, PHILADELPHIA.

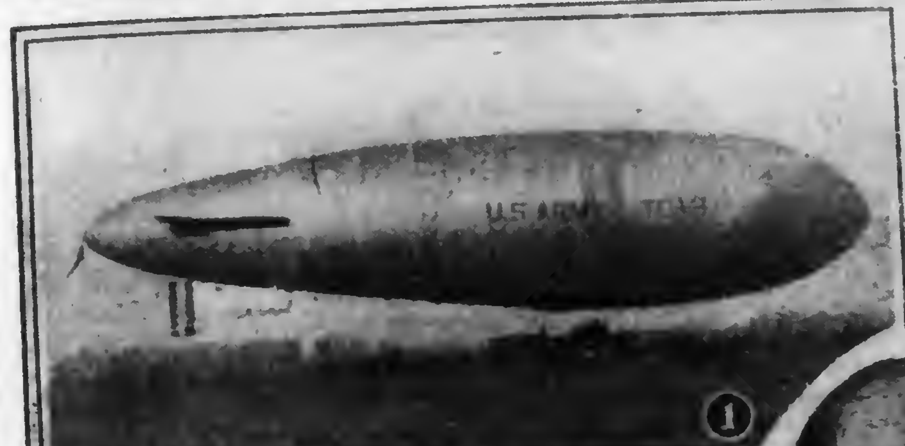
Puzzle Prize Winners

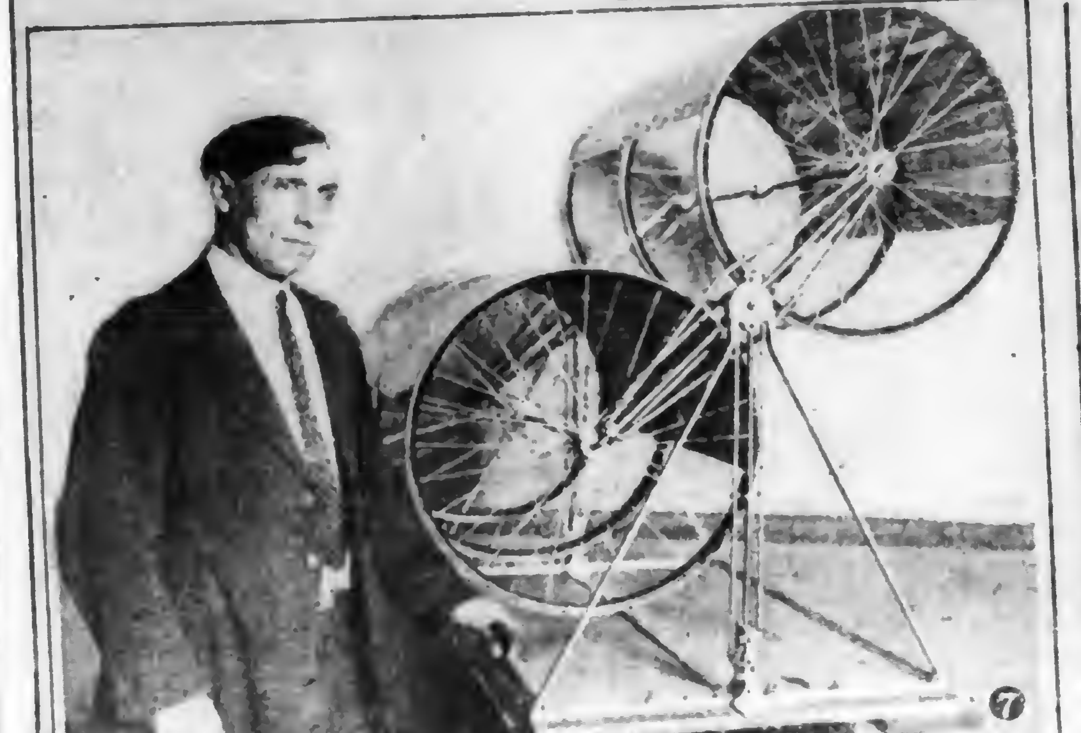
The answer to the puzzle published in the December 27 issue of Pennsylvania Farmer is: THE PUZZLE EDITOR WISHES YOU ALL A HAPPY NEW YEAR.

The prize winners are: Jerome Cavanaugh, age 9, Elmira, N. Y.; Helene C. Corra, age 10, Kingston, N. Y.; Robert V. Kelly, age 10, Buffalo Mills, Pa.; James Artman La[illegible], age [illegible], Lambertville, N. J.; Charles H. Lasher, age 9, Auburn, N. Y.; Elsie McClister, age 7, R[illegible]lofs, Pa.; Edna Sharp, age 10, Yo[illegible], Pa.; Margaret Shulle, age 10, N[illegible], Pa.; Dorothy Smouse, age [illegible], [illegible]town, Pa.; [illegible] Bedford, Pa.; Ralph Sweigart, [illegible] 10, New Holland, Pa.

The nice little messages many of you sent along with your answers were much enjoyed. I hope those of you who said this was your first attempt will keep right on solving the puzzles. Many of you answer each week, and I find it very pleasant to come across familiar names.

PASSING EVENTS IN PICTURES





1.—Dirigible picks up messenger plane while in mid-air. The success of this experiment proves that giant dirigibles will be able to pick up and drop passenger planes while in motion.
2.—Palace of the Governor of Khartum, Egypt.
3.—Benjamin Franklin, born January 17, 1706, who left behind him not only wise precepts but the example of a well filled life.
4.—Miss Natalie Hammond, when she danced a minuet of the period of the French Revolution at the costume ball given in her honor in Washington.
5.—The largest and the smallest dogs of 2000 shown at the recent exhibition in England.
6.—[illegible] head at the agricultural show in Birmingham, England.
7.—A model of a flying bicycle recently perfected, and its inventor. He studied aeronautics after finishing his day's work as a vest maker.
8.—Uncle Sam's Coast Patrol is [illegible] off the Jersey shore [illegible] which were recently captured.

That Flavor of Salt Pork

The Salting Process and Several Good Recipes

WE ENJOY an occasional dish of good salt or pickled pork as well as other meats. Nothing else seems to impart to boiled and baked beans, or the good old-fashioned boiled dinner, the flavor that comes from a generous piece of sweet salt pork.

Always use a perfectly sweet, clean jar or keg for salting pork, and have the pork entirely free from animal warmth. Rock salt is the purest and best salt to use. Put a two-inch layer of salt in the bottom of the jar, then, standing the strips of pork on edge allow inch spaces between them and also next to the jar, and pack these well with salt. Put an inch layer of salt on top and continue packing in the same way until all the pork is used.

Then make a brine strong enough to float an egg, scald it, and when cold pour over the pork. Put on a weight heavy enough to hold the meat beneath the brine. Have plenty of brine and never allow a bit of meat to project above the brine. Rightly prepared this will keep all summer. Plenty of salt must be used. There is no danger of having too much.

It's Not Too Late to Enter the Prize Contest

FOR the three best letters of not more than 300 words on the subject, WHO SHALL HOLD THE PURSE STRINGS, we shall make the following awards:

First prize $15.00
Second prize 10.00
Third prize 5.00

The letters must include suggestions about the division of the family's income between husband and wife and about the problem of children's earning and allowances.

Contest letters must reach the Pennsylvania Farmer office on or before Thursday, January 22. Address them to the CONTEST EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

ROAST SALT PORK

Put the pork in cold water and bring to a boil to freshen. Remove from water, place in a baking pan, make incisions in the skin, sprinkle with pepper and minced sage add one cup water and roast in a hot oven. Baste with the drippings. When half done, lay pared potatoes in the pan around the roast and let cook brown. When done, take up the roast, place the potatoes around it, and serve with tart apple sauce.

HEAD CHEESE

Boil a pig's head until the meat will strip from the bones. Take the lean part and as much of the fat as liked, chop or grind fine, season with salt, pepper and herbs or onions. Place it in a jar and put on a heavy weight. When well pressed, cut off in slices and serve cold with mustard or catsup.

SCRAPPLE

Boil a pig's head (or the legs may be used) until tender. Strip meat from bones and grind fine. Skim the fat from the broth, return meat, season well with salt and pepper. Add corn meal and flour until of the thickness of mush. Cook on top of the stove for one hour, watching it very carefully. Pour into pans and cool. Slice and fry.

SOUSE

This can be made of pig's head, legs, heart or tongue. Boil very tender in salted water, remove the bones, cut meat in pieces and place in vinegar spiced and salted and peppered to taste. Serve cold. If put into hot vinegar and sealed in jars this will keep till spring, and comes in handy when a busy time comes.—Mrs. C. B. W.

Wolf in Sheep's Clothing

THERE are forms of graft going on quietly in many communities which the victims hesitate to expose for various reasons. One such came to our knowledge some time ago, and it seems upon investigation that it is all too common. Unsophisticated widows seem to be the most frequent losers in this skin game.

A few days after the husband and father is buried a lawyer happens along on a slight business errand and is full of sympathy for the widow. He explains in the course of the conversation that altho he does not know the widow very well the dead man was a very good friend of his, and he is filled with grief over the loss of a good man from the community. Naturally the widow opens up her heart on business matters and he gains a good idea of the family finances before he leaves.

He Gets a Good Picking

If there is little prospect he draws his visit to a close and departs with sad countenance, but if there seems a chance for good picking he offers a few suggestions in a general way, and then tells the widow to be careful to handle her affairs in a business like way. "I shall be glad to help the wife of my good friend," he adroitly throws in as he takes his departure.

I have heard of three such cases lately and each time the inexperienced woman freely consulted the lawyer on matters great and small. Many of her problems might have been solved by a level headed neighbor or her own common sense, but she leaned upon the good friend confident that he wished to help her. And he did help her with many things and advised her correctly, but when the bill came she was staggered. There was nothing to do but pay it, and make good resolves for the future.

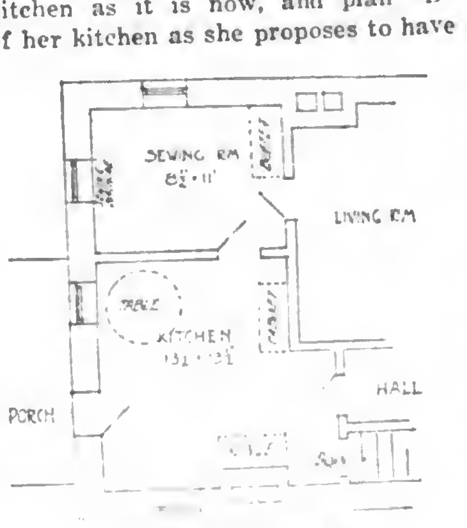
Inexperienced women, particularly those who must hold tightly to every penny to keep the family together, cannot be too cautious. In the hour of grief is no time to decide what to do if the decision can possibly be postponed. Many a woman has scattered her farm equipment, made hasty plans and mortgaged her future by rushing into some new venture without due consideration.

It is well to have an open ear to all advice, and to weigh carefully every plan that presents itself. But above and beyond all the lone woman must be on the lookout for the wolf in sheep's clothing who is so anxious to help inexperienced women.—Hilda Richmond.

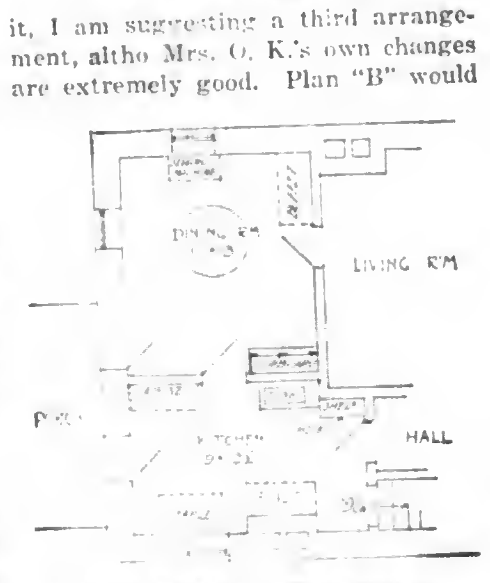
Three Versions of a Kitchen

The Room As It Is, As It May Be, As It Might Be

IN REPLY to the letter from Mrs. O. K., enclosing plan "A" of her kitchen as it is now, and plan "B" of her kitchen as she proposes to have it, I am suggesting a third arrangement, altho Mrs. O. K.'s own changes are extremely good. Plan "B" would give her a most comfortable and convenient layout.



"A" The kitchen now.

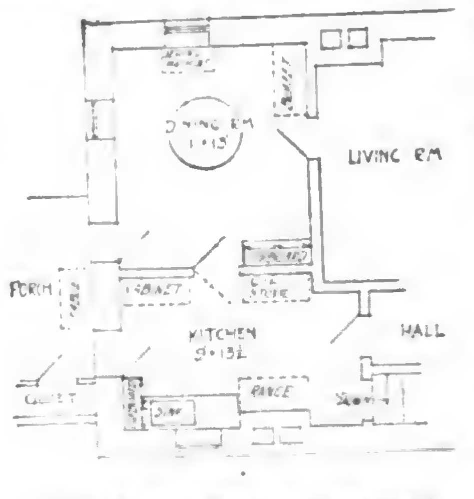


"B" As Mrs. O. K. wants it.

The changes I have suggested in plan "C" are minor in character. The most important one is to change the sink, placing it under the window where it will get plenty of light. I believe this light and air will be worth a lot more than the handiness of having the sink nearer the dining room. Moreover, I want the space where the sink was, to set an oil stove.

The cupboard at the end of the sink is quite convenient to hold pots, pans, dishes, etc.

I have shifted the table to the porch; it really isn't needed in the kitchen. The large drainboard of the sink serves as a work table; and of course the cabinet has breadboards, etc., that pull out when wanted. But if desired, a small table on casters may be set in the center of the kitchen.



"C" The suggested arrangement.

The shelf with hooks under it is a bad feature, I am afraid; it encourages the men to come into the kitchen to hang up their wet coats. So I have put a closet on the porch.—W. D. B.

Radio Reflections

WE WERE much interested in the idea that "even the phonograph may bring loss rather than gain if it prevents a personal study of music." It occurs to us while listening to the radio that this is even more open to similar criticism.

While its many benefits and advantages are self-evident, will it prove an unmixed blessing to mankind? I can't believe, or seriously fear, that it ever will supplant the country church or small town church. Yet it is inevitable that all churches will feel its influence to a greater or lesser degree. Will it not, then, prove a menace to moral progress to just the extent that it cuts church attendance?

Taking It Easy

Who in the wide world will ever receive an atom of edification by watching his neighbor smugly absorbing a radio sermon from his easy chair at home? For aught the other fellow knows, he may be enjoying the latest prize fight. And is not the man or woman who is perfectly content with a radio existence in greater danger than others, because of the ease with which all desires are satisfied? The effort of "tuning in" may be Herculean (sometimes, I notice, it proves super-human) but, once accomplished, anything is available from market reports to a barn dance.

I hope I am not a hopeless fogy. I ought not to be at forty-two, but I am wondering if the sum total of the general effect of radio will eventually be on the debit or credit side of the ledger. It certainly has vast and undeveloped possibilities, and, rightly used, it should prove a priceless boon. But nothing yet has ever been rightly used by everyone concerned and we can hardly expect radio to be the first exception in the history of the world.—Mrs. E. M. Anderson.

Useful Calendars

THE season of calendars is with us again. Usually we get a regular deluge of them, some beautiful, others merely useful. I always pick out several of the prettiest and hang them up. Some time ago I found out how to make them all useful.

While waiting in a lawyer's office I noticed several calendars, one displaying on its pad the month previous, one the present month, and one the coming month. I came home and immediately arranged mine likewise and have found it very handy indeed.—Mrs. Perley W. Lawton.

The Out-of-the-Ordinary Room

If You Have One That Bothers You Try These Ideas

EVERY housekeeper has no doubt struggled unsuccessfully to make a room look pleasant and homelike and has wondered why she could not succeed. This is very often due to the fact that the room is out-of-the-ordinary.

If a room is very low, keep the ceiling as nearly white as possible and always keep it plain since any figure seems to bring it nearer the eyes. Have the curtains hang in long, straight lines and avoid all valances. Plain or striped papers are best.

Small-figured, neutral-toned rugs keep the floor from "rising up" to meet the ceiling. A tall mirror is an excellent choice as a wall decoration. A plain wood molding placed where side wall and ceiling join is better than bordered paper; if border must be used, it should be narrow.

The Room That's too High

A room that is too high has a stilted, cheerless look. Wonders can be accomplished with the right wallpaper in such a room. Have the ceiling paper a rich cream instead of white and "drop" this paper eighteen or twenty inches down the side wall with a rather heavy wood molding at its lower edge. Avoid stripes in the side walls or in drapery material.

Broaden the windows as much as possible by using over-draperies and valances of rather pronounced design. Rugs may be of gayer color and design than is usually considered desirable. Avoid tall, stilted furniture such as a tall, narrow bookcase or very high spindled chairs. Overstuffed furniture usually has a good effect in this room.

A dark, sunless room demands yellow—artificial sunlight, so to speak. Have few draperies at the windows and those few sheer and golden. An orange-colored bowl on the window sill or table gives a surprising effect of cheer. Keep walls, floor and furnishings in light, warm brown and yellow tones. If this room is large, a gay-colored rug looks well.

Add Space to Small Room

Perhaps nothing takes more careful handling than the too-small room. Paint and paper of the same shade have a way of adding space. Paper should always be plain and light in tone as this seems to make the walls recede from the eye. Never have a surplus article of furniture in such a room or a piece that is heavy or over-large.

This is the room where extra mirrors will show to advantage. A large mirror opposite the door gives a feeling of space as one enters the room. Have the rug very plain and all draperies simple and rather characterless as to design and color. If the small room has sufficient sunlight to stand it, it looks well done in tones of gray and violet or dull, soft neutral greens.

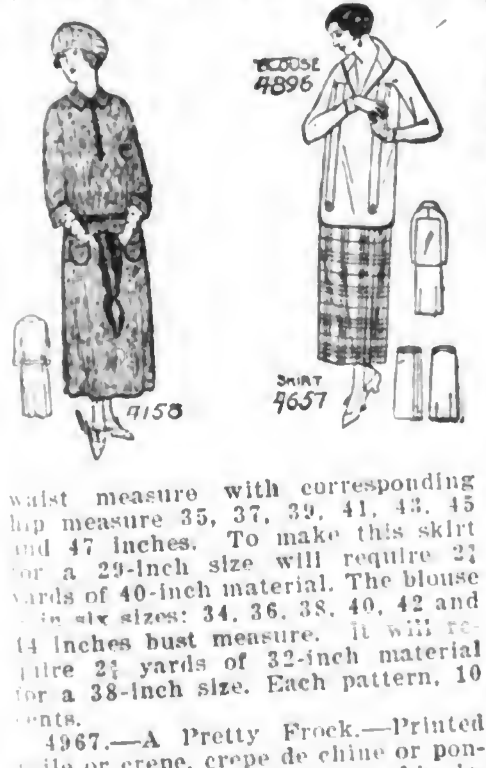
There is a satisfaction in "getting the better" of the trying out-of-the-ordinary room.—Alice Margaret Ashton.

For the Women of the House

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

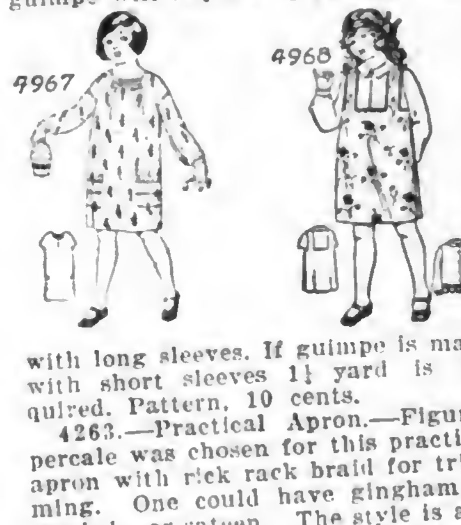
4158.—A Popular Day Dress.—This model is in "slip-on" style. Plaits at the side seams, give added fulness to the skirt portions. Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 3¼ yards of 54-inch material Pattern, 10 cents.

4896-4657.—A Jaunty Costume.—A trim and stylish skirt is here combined with a shirt blouse. The blouse, 4896, may be of silk madras, linen or crepe. The skirt, 4657, is excellent for homespun, plaid or check suiting or broadcloth. Seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure with corresponding hip measure 35, 37, 39, 41, 43, 45 and 47 inches. To make this skirt for a 29-inch size will require 2¾ yards of 40-inch material. The blouse is in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It will require 2¾ yards of 32-inch material for a 38-inch size. Each pattern, 10 cents.

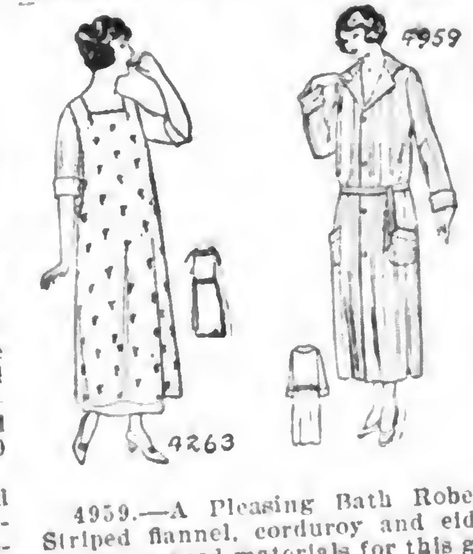


4967.—A Pretty Frock.—Printed voile or crepe, crepe de chine or pongee would be attractive for this design. Four sizes: 4, 6, 8 and 10 years. A six-year-size requires two yards of 32-inch material if made with long sleeves. Without the long sleeves 1⅝ yard will be required. For band cuffs of contrasting material one-eighth yard is required. Pattern, 10 cents.

4968.—For School.—Cretonne or chintz may be used for the dress, and crepe or batiste for the guimpe. Or, one may have wool rep or pongee for the dress. Four sizes: 4, 6, 8 and 10 years. A six-year size will require 1⅝ yard of 32-inch material and the guimpe will require 1½ yard if made with long sleeves. If guimpe is made with short sleeves 1¼ yard is required. Pattern, 10 cents.



4263.—Practical Apron.—Figured percale was chosen for this practical apron with rick rack braid for trimming. One could have gingham or cambric, or sateen. The style is also good for rubber-finished fabrics and for crepe. One size, medium. It requires 1¾ yard of 32-inch material. Pattern, 10 cents.



4959.—A Pleasing Bath Robe.—Striped flannel, corduroy and eiderdown are good materials for this garment. It could also be made of quilted silk or satin, or of blanket cloth. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4½ yards of 36-inch material. Pattern, 10 cents.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, J. O. Johnson, 642 N. Broad St., Philadelphia, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Crooked Spines Made Straight

OVER 50,000 REMARKABLE CASES

An old lady, 72 years of age, who suffered for many years and was absolutely helpless, found relief. A man who was helpless, unable to rise from his chair, was riding horseback and playing tennis within a year. A little child, paralyzed, was playing about the house after wearing a Philo Burt Appliance 3 weeks. We have successfully treated over 50,000 cases in 23 years.

30 Days' Free Trial

We will prove its value in your case. There is no reason why you should not accept our offer. The photograph shows how light, cool, elastic and easily adjusted the Philo Burt Appliance is—how different from the old torturous plaster, leather or steel jackets. Every sufferer with a weakened or deformed spine should write at once. Send for our free booklet. If you describe case it will aid us in giving you definite information at once. PHILO BURT CO., 271-1 Odd Fellows Temple, Jamestown, N.Y.

DON'T WEAR A TRUSS

BE COMFORTABLE—

Mr. C. E. Brooks

Wear the Brooks Appliance, the modern scientific invention which gives rupture sufferers immediate relief. It has no obnoxious springs or pads. Automatic Air Cushions bind and draw together the broken parts. No salves or plasters. Durable. Cheap. Sent on trial to prove its worth. Beware of imitations. Look for trade-mark bearing portrait and signature of C. E. Brooks which appears on every Appliance. None other genuine. Full information and booklet sent free in plain, sealed envelope. Brooks Appliance Co., 323-A State St., Marshall, Mich.

Chase Pain Away with Musterole

When the winds blow raw and chill and rheumatism starts to tingle in your joints and muscles, get out your good friend Musterole.

Rub this soothing white ointment gently over the sore spot. As Musterole penetrates the skin and goes down to the seat of trouble, you feel a gentle, healing warmth; then comes cooling, welcome relief from Old Man Pain.

Better by far than the old-fashioned mustard plaster, Musterole does the work without the burn and blister Grandma knew so well.

For croupy colds, sore throat, rheumatism and congestion of all kinds, just rub on Musterole.

Don't wait for trouble; keep a jar or tube on the bathroom shelf.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

35c and 65c jars and tubes; hospital size, $3.

The Musterole Co., Cleveland, Ohio

THE DAY'S MEALS

Plan Them in the Morning and Accomplish More

AFTER years of experimenting with the day's program of work, I have decided it is best to start the day with a definite plan for the meals of the day.

I have tried planning the meals on paper for the week, but I do not regard this as practicable on the farm. The day's occupations vary and the meals must be planned in accordance with them.

I have decided it is best to plan the meals for the day in the morning. If there are children in the home to help write out the menus on a pad and hang it over the kitchen table, where it can be easily consulted.

Getting an Early Start

We have our breakfast from 7 to 7.30, after the men have finished milking. While the breakfast is cooking, if I have any moments, I put them in on the other meals. First the vegetables are gotten ready, then as soon as the breakfast dishes are washed I do as much as possible. If a dish is to be put in the fireless, I put it in. If we are having baked beans for supper, I get them started.

I am especially partial to oven meals, and enjoy nothing more than getting an entire meal in my nice big oven. Not only do I like the baked things, baked potatoes, baked apples, baked squash, but it leaves such a nice, orderly kitchen!

When foods are prepared I clean up the kitchen and the time spent there during the rest of the day is comparatively short.

If unforeseen interruptions turn up I have the most important part of the day's work done, the planning of the meals.

One Big Hearty Meal

Daughter, who is eleven, buys her warm lunch at school, so we plan to have our light meal at home at noon, and have our hearty meal when she gets home. As we have supper before the men do the evening milking, we must have it at five o'clock, so we would hardly feel like having a hearty meal at noon and another at five o'clock, anyway.

The winter days are short at best, and if we accomplish all that we want to, we must plan the day's work carefully, for half at least of the accomplishment depends on a practicable working plan.—May H. Mumaw.

Tasty Variations

BAKED PUMPKIN OR SQUASH

To 3 cups cooked mashed pulp add 1 cup cream and 1½ teaspoon salt. Put in a baking dish and cover with thin strips of bacon. Bake until the bacon is nicely curled.

* * *

CELERY AND CARROT SOUFFLE

One cup stewed celery, 1 cup stewed carrots, 1 cup white sauce, 2 eggs beaten light.

Bake until firm. Other left-over vegetables may be used successfully in the same way.

* * *

BACON SAUCE

This sauce is especially good on Swiss chard, cabbage or eggplant. 2 slices of bacon chopped fine and fried almost crisp, being careful not to burn it. Stir in 2 level tablespoons of flour, add 1 cup of milk gradually and boil, stirring constantly, till thick and smooth.

* * *

EASY RAISIN BREAD

When making out the last loaf of bread for baking, pull the dough into a piece about one inch thick, cover with raisins, roll up and put in the pan.—Mrs. W. T. C.

The Light in the Clearing

(Continued from page 16)

for his age an' a purty likely boy they tell me. He'd 'a' been all right at the county house until he was old enough to earn his livin', but you was too proud for that—wasn't ye? I don't mind pride unless it keeps a man from payin' his honest debts. You ought to have better sense."

"An' you ought to keep yer breath to cool yer porridge," said Uncle Peabody.

Mr. Grimshaw opened the door and stood for a moment looking at us and added in a milder tone: "You've got one o' the best farms in this town an' if ye work hard an' use common sense ye ought to be out o' debt in five years—mebbe less."

He closed the door and went away.

NEITHER of us moved or spoke as we listened to his footsteps on the gravel path that went down to the road and to the sound of his buggy as he drove away. Then Uncle Peabody broke the silence by saying:

"He's the—"

He stopped, set the half-splintered stick aside, closed his jackknife, and went to the water-pail to cool his emotions with a drink.

Aunt Deel took up the subject where he had dropped it, as if no half-expressed sentiment would satisfy her, saying:

"—old skinflint that ever lived in this world, ayes! I ain't goin' to hold down my opinion o' that man no longer, ayes! I can't. It's too powerful—ayes!"

Having recovered my composure I repeated that I should like to give up school and stay at home and work.

Aunt Deel interrupted me by saying:

"I have an idee that Sile Wright will help us—ayes! He's comin' home an' you better go down an' see him—ayes! Hadn't ye?"

"Bart an' I'll go down to-morrer," said Uncle Peabody.

I remember well our silent going to bed that night and how I lay thinking and praying that I might grow fast and soon be able to take the test of manhood—that of standing in a half-bushel measure and shouldering two bushels of corn.

We dressed with unusual care in the morning. After the chores were done and we had had our breakfast we went up-stairs to get ready.

Aunt Deel called at the bottom of the stairs in a generous tone:

"Peabody, if I was you I'd put on them butternut trousers—ayes! an' yer new shirt an' hat an' necktie, but you must be awful careful of 'em—ayes."

The hat and shirt and necktie had been stored in the clothes press for more than a year but they were nevertheless "new" to Aunt Deel. Poor soul! She felt the importance of the day and its duties. It was that ancient, Yankee dread of the poorhouse that filled her heart I suppose. Yet I wonder, often, why she wished us to be so proudly adorned for such a crisis.

Some fourteen months before that day my uncle had taken me to Potsdam and traded grain and salts for what he called a "rip roarin' fine suit o' clothes" with boots and cap and shirt and collar and necktie to match. I having earned them by sawing and cording wood at three shillings a cord. How often we looked back to those better days! The clothes had been too big for me and I had had to wait until my growth had taken up the "slack" in my coat and trousers before I could venture out of the neighborhood. I had tried them on every week or so for a long time. Now my stature filled them handsomely and they filled me with a pride and satisfaction which I had never known before. The collar was too tight, so that Aunt Deel had to sew one end of it to the neckband, but my tie covered the sewing.

CAULIFLOWER is a little easier altho best stock is selling at about last week's values; Calif, crate, $2.25@2.75. CELERY is firmer and higher when fancy. Some Florida celery was on the market the first time this season, but stock was too green and it sold at low prices; Calif, crate, $5.50@7.50, poor $3@4; N Y, crate, $3@3.75; Fla, crate, green, $2; Penna, bch, 15@25c, poor 10@12c. CUCUMBERS are in light supply; Fla, hmpr or box, fancy, $5@7; choice, $4@5. EGGPLANTS are in light supply but mostly poor; Fla, crate, $2@4. KALE is much lower than it was a week ago, with supplies more plentiful; Norfolk, bbl, $1.15@1.25. LETTUCE is firm when fancy but supplies show a wide range in condition, and prices take a correspondingly wide range; Fla, hmprs, $1.50@2, poor 75c@$1.25; do, crates, 75c@$1.50; Calif, crates, $2.75@3.25, poor $1.50@2; Arizona, crate, $2.75@3.25. HORSERADISH, nearby, lb, 10@15c; western, bbls, $12@14. ONIONS are moving rather slowly and there is a weaker tendency to the market; yellow, 100-lb sacks, No 1s, $3@3.15, poor $2.65, No 2s, $1.50; white boilers, 100-lb sacks, $3.50. PARSLEY is in light supply and high prices are prevailing; New Orleans, bbls, $12@14; Calif, crate, $7@7.50. PARSNIPS show quite a wide range in quality and condition, strictly fancy white parsnips being in good demand; N J and Penna, ⅝ bskts, fancy, 85c@$1; fair to good, 40@75c. PEAS are in light supply but move rather slowly; Fla, hmprs, $3@4; Mexican, crates, $8.50@9. PEPPERS are in moderate supply and market is about steady; Fla, crates, fancy, $5@5.25; choice, $2.75@3.75. POTATOES have been getting a little stronger and advancing slightly almost daily since our last week's report; Penna, 150-lb sacks, $2.25@2.65; Maine, 150-lb sacks, Green Mountains, $2.35@2.40; Spaulding Rose $2.25; New York, 150-lb sack, $2.10@2.15; East Shore Va, bbls, $1.75@2; N J, ⅝ bskts, No 1s, 55@70c. ROMAINE a little lower; Fla, hmpr, $1@1.50. SPINACH is bringing good prices when in good condition; Norfolk, bbl, $3.50@4; poor, $2.50; Texas, bu, $1.50. SQUASH is in light supply but prices are lower; Fla, crate, $2.25@2.75. SHALLOTS, New Orleans, bbls, $4@8. SWEET POTATOES are a little weaker but at the same time very good prices are prevailing; Delaware, hmprs, No 1s, $2@2.50; No 2s, $1.50@1.75; N J, ⅝ bskts, No 1s, $1.75@2.15; No 2s and mediums, 75c@$1.60. TOMATOES show a wide range in condition with fancy stock bringing good prices; Fla, crate, fancy, $4@6.50; choice, $3.50@5.50; Penna, hot house, lb, 25@35c; Ohio, hot house, 10-lb bskt, $2.50@3.50. TURNIPS are bringing good prices with supplies rather light; N J, yellow, 100-lb sacks, $1.50@1.75; Virginia, 120-lb sacks, $1.50@1.75; N J, white, bu, $1@1.15; Penna, yellow, ⅝ bskts, 50@75c. TURNIP GREENS, a few, from the Eastern Shore have been on the market but they are mostly only poor to ordinary in quality; Eastern Shore, hmpr, $1@1.75. YAMS are weaker and a little lower; Eastern Shore, bbls, $3.50@5; Delaware, hmprs, No 1s, $1.50@1.65. WATERCRESS shows a wide range in condition, some showing frost and cold defects; 100 bchs, $4@5, poor and frosted, $2@3.

Fruits—APPLES are firmer and higher, on strictly fancy apples, but the trade does not want the poor and common and ordinary apples which move rather slowly at irregular prices as to condition; bbls, Staymans, $5@7.50; Delicious, $8@9, Greenings $3@6.75; Hubbardsons, $4@4.75, Black Twigs, $4.50@5.75; Yorks, $5@5.75; Rome Beauty $6@7.50; Baldwins, $4.50@5.50; Ben Davis $3.50@4; Ganos, $4.50; Champions, $4.50. Bushels, Hubbardsons, $1@1.25, Staymans, $1.75@2.25; Starks, $1.65@1.75; Neros, ⅝ bskts, $1.65@1.75; Paragons, $1.65; Delicious, $1.50@2.50; Ben Davis, 75c@$1, Yorks, 75c@$1.50; Staymans, $1@1.75; Starks, 75c@$1.50; Paragons, 75c@$1.50. STRAWBERRIES are in moderate supply and bringing fairly good prices; qt, Fla, 40@55c. CRANBERRIES meet a very limited demand and prices are a little lower and show a wide range as to condition. New Jersey, 32-qt crate, $2@3.50; half bbl crate, $4@7.

Live Poultry—The market declined about 2c per pound today on [illegible] fowls and chickens and about [illegible] per pound on ducks. Turkeys and geese continued at former prices. Cloverseed, cash, old and new, $19.[illegible] January, $19.50; February and March [illegible] $19.60 bid; October, $17.50 asked. Alsike cash, old $13.10, new and January, $1[illegible] asked; March $13.45 asked. Timothy, [illegible] cash and January, $3.35; March, $3.42½.

County News and Comment

(Continued from page 5)

Lancaster County, Pa.—On January 2 a heavy snow fell and sleet covered the ground about twelve inches deep. Traveling over country roads is miserable. Mail carriers and school busses could not travel until the roads were opened. Tobacco growers are anxious- waiting for damp weather to take down part of the crop and prepare it for stripping. No sales have been made recently. Prices: eggs, 60c; butter, 40c; wheat, $1.75; corn, $1.25; baled hay, $17; straw, $14; bran, $41 ton; gluten, $52 ton; cottonseed, $54 ton. Dairy feeds from $41 up to $48.50 ton. R. O. R., Jan. 5.

Lawrence County, Pa.—Mild winter weather and some snow. Fears that a scarcity of water might prevail have all vanished. Considerable late plowing was done by tractor. Butchering mostly done. Live poultry, 23c; dressed, 40@45c; country butter, 60@65c; eggs scarce, bringing 70c up. Dairymen who are compelled to buy part of feed are not making much for amount of labor used. Wheat, $1.55; oats, 65c; shelled corn, $1.31; ear corn, 55c; clover hay, $17.50; timothy, $15.—M. L. V., Jan. 3.

Lebanon County, Pa.—On January 2 we had the heaviest snow fall of the winter. Roads nearly impassable for several days and many farmers could not get to the city markets on Saturday, January 3. The butchering season is almost at an end in this county. Much manure has been hauled this fall prior to the heavy snowfall. The farm products show held in Lebanon during the week of December 16 to 21 was very successful. Some of the best produce of the county was exhibited. About all the work the farmers can do at present is to tend their stock, shred corn fodder, work home some more fuel, and shovel snow. Many farmers are experiencing hardships in watering their stock, due to scarcity of water. Many farm stock sales being held this winter. It seems as tho quite a few were going to stop farming from the number of farms that are to let for rent, and others being vacated. Prices: wheat, $2; corn, $1.05; oats, 55c; apples, $1.50@2; eggs, 60@65c; butter, 50@55c.—P. L. M., Jan. 5.

Lehigh County, Pa.—Some real cold days but no snow on the ground, so farm work progressed nicely in December. On January 2 winter set in with a terrific blizzard that closed all streets to traffic and put a stop to all outdoor work. The snow may be good for the grain fields, which are weak and badly frosted already. Very little plowing this fall. Small game very scarce and hunters got little. Some farm stock sales already held; only ordinary prices realized. Potatoes are still plentiful and moving slowly at 50c per bushel at shipping points. Ice one to ten inches thick and many farmers are filling their ice houses. Corn scarce and high in price. At a recent public sale a crib full was sold at $1.12 per bushel with at least fifty per cent moldy. Poultry pretty well cleaned up before the holidays with chickens 26c and turkeys 45@50c. Wheat, $1.50; corn, $1.25; oats, 70c; potatoes, 50c, eggs, 60c; butter, 44c.—O. L. R., Jan. 5.

Lycoming County, Pa.—Happy New Year "as the days begin to lengthen the cold begins to strengthen" has proven its truth within the last few days when the mercury dropped to several degrees below zero, causing a temporary panic among the tobacco strippers who immediately turned their whole attention toward the cross work puzzle. Very little work being done except the daily chores and wood cutting which isn't such a small item during this kind of weather. Pork is holding its own at 17c dressed; poultry, 23c; eggs, 50c; butter, 50c; hay in the mow, $15; wheat, which is moving rather slow at $3 cwt.; corn nearly all husked.—C. I. C., Jan. 5.

Mercer County, Pa.—Sheep clubs for boys and girls are about to be started by the farm bureau leaders. The F. & M. Bank, of Mercer, has agreed to finance these clubs. We already have our baby beef clubs which won high distinction at the annual round-up held in Mercer some two weeks ago. We are having genuine winter weather, ten to sixteen degrees below zero and four to six inches of snow. Dirt roads very rough. Almost all our corn is husked and fodder stored. Very little fall plowing. Farmers doing little work now except chores as we do not burn wood in this section, having plenty of gas and coal. Hogs very scarce, selling at 12@14c, dressed. Veal calves bring 15c hog dressed. As this is now a dairy section there are few cattle or sheep being fed for market. Turkeys sold for 50c live weight for Christmas. Butter brings, 50c; eggs, 55c; chickens, 18c; wheat, $1.60; potatoes, 85c. Plenty of good [illegible] in this county but none being sold yet. —J. W. B., Jan. 5.

Mercer County, N. J.—The snow and sleet storm of January 2 was very welcome as no snow had fallen to protect grain and not very much rain to fill the springs. The [illegible] the lowest for the beginning of winter in many years. The cold wave before Christmas stopped fall plowing in eastern part of county. Dairymen finding a keen market for their home [illegible] owing to [illegible] on western poultry. Turkeys and [illegible] cleaned up well for the holidays. Turkeys sold for 55@70c live and ducks, 32 [illegible] dressed. The farmers' retail markets [illegible] Trenton are officially closed January 1 [illegible] June, but the city allows farmers to [illegible] local products at the stands. Quite an [illegible] market is expected on Friday nights [illegible] the next five months. There is quite [illegible] large amount of produce in storage on [illegible] farms and this will gradually reach [illegible] dealers and consumers. Apples in local [illegible] offered in demand lots and have held [illegible] even figures, with fancy grades bringing [illegible] money. Apples, 16-qt. baskets, Winesaps, [illegible] $1.10, Nero, 75@$1 [illegible] $1@$1.25. Potatoes, N J round whites, $2 per 150-lb. sack, wholesale; Giants, $1.75 per sack, wholesale; N. Y. round whites, $1.85@2; Maine Cobblers, $2@2.15.—J. E. H., Jan. 6.

Monmouth County, N. J.—Weather conditions during the fall months gave the farmers an opportunity to clean up their work, put away tools in good shape and settle down for the severe winter that was promised. According to the first few days of January the promise is likely to come true. A few more potatoes were held in storage and marketed during October, November and December than in previous years. This tendency seems to be increasing, especially since higher quality potatoes are being produced in most sections of the county. The yield of corn lacked uniformity; some fields giving a yield of less than twenty-five bushels of shelled corn to the acre, while others gave from fifty to sixty. Regular fall and winter poultry troubles are prevalent. Egg production rather low in some flocks, especially those which are hatched the latter part of February. Apple growers have quite a large supply in local storage and apples are bringing a good price when weather permits the farmer to move them.—E. D., Jan. 5.

Monroe County, Pa.—The past two weeks very cold and snappy. Thermometer registered zero on December 26. The new year began clear and cold, on January 2 we had a snow storm measuring twenty-two inches. Traffic was tied up for over twenty-four hours. Ice cutting began on December 30 at Tannersville and McIlhaney with eight inches as clear as crystal. The farm census began over two weeks ago and will continue during the month of January. Deer season closed on the fifteenth with a good report from the hunters. More bucks were shot and deer more plentiful than any previous year.—G. E. S., Jan. 5.

Northumberland County, Pa.—About eight inches of snow. Freezing and thawing in December hard on wheat, as both early and late seedings have little top. Most of the wheat has been sold at $1.25@1.40. Considerable farm work remains to be done. Hogs have been hurried off to market and pigs are very scarce. Corn molding in many cribs and has poor feeding value. The annual Farm Bureau meeting held December 11 with about a hundred in attendance. E. S. Bayard and Dr. T. E. Munce gave splendid talks. The farm products show was the best ever held. Quite a number of farmers are planning to attend the state show at Harrisburg this month. Prices: eggs, 55c; chickens, 20c; milk, $1.90 for three per cent; pork, 14c; oats, 50c; corn, $1; wheat, $1.80, straw, $10; hay, $15.—W. C. G., Jan. 5.

Passaic County, N. J.—Weather for the past month quite severe for this section. On January 2 from fifteen to eighteen inches of snow fell from 4:30 A. M. to 6:30 P. M. and by the next morning all state and county roads around this section were cleared with a wide enough space for two machines to pass easily. The Passaic County Board of Agriculture will hold their annual banquet and election of officers Wednesday evening, January 7. The delegates to Trenton for agricultural week will leave for Trenton Tuesday morning, January 13. Prices: carrots, 75c@$1 bu.; kale, 75c@$1 bbl.; parsnips, $1@1.25 bu.; apples, $1@2 bu., depending on size and quality.—N. D., Jan. 6.

Potter County, Pa.—Weather mild as a rule. Potatoes still bring only 35c bu. at shipping points. We were pleased to note that Potter County farmers led in the production of certified seed potatoes in this state. One of our farmers grew more than any other one producer in the state—6500 bushels. Our county has to her credit 37,945 bushels. During the hunting season 167 bears, nearly 100 deer, several elk and one white deer were killed. Pheasants have been raised and released here but severe cold and their natural enemies keep them nearly extinct. The price of milch cows shows a gratifying advance. Butter sells for 48c; eggs, 65c.—M. C. S., Jan. 8.

Sullivan County, Pa.—Winter came with a rush last night bringing ten inches of snow. Farmers getting their winter's supply of wood; wood becoming scarcer and harder to get. Just now it is selling at $2.50 a cord and hard to get at that price. Few crops have been marketed; corn and hay being fed up. Farmers are holding their potatoes, buckwheat and apples for better prices, altho buckwheat commands a fair price. The road operations at Muncy Valley ceased December 15; the state still working on the Eaglesmere road. Prices: wheat, $1.45; rye, $1.05; corn, $3, shelled; buckwheat, $1.10; oats, 75c; butter, 40c; eggs, 50c; lard, 25c.—M. O., Jan. 2.

Susquehanna County, Pa.—Winter has come, ground frozen hard and some snow. Apples are rotting badly and almost impossible to sell. Eggs selling for 75c before Christmas and now they are 50c. Schools opened today after the holiday vacation. An epidemic similar to the old fashioned flu has invaded this county. Farmers expecting to draw lime this week and store it for spring use. Pork and beef moving slowly altho porkers are scarce.—J. A. G., Jan. 5.

Union County, Pa.—Farmers making use of the sledding to haul coal, wood and market grain. Since the farm census has been taken some farmers have started the new year by keeping accounts of eggs produced and sold as well as milk and calves sold. Most of the wheat in the county sold before it reached $1.75 so the few who have wheat are holding it for $2. Some new corn on ear bought by the Mifflinburg Farmers' Exchange at a little better than $1 a bushel. Oats are worth 55c; pork, 14c; eggs, 50c; chickens, 22c, and beef or fat cattle are slow in selling now. The citizens of Union township are pleased to have electric power and light furnished them from Northumberland. Other townships want light too.—J. N. G., Jan. 6.

the Tiny Weight that tips the scales

EVEN the best farm animals need a large part of all feed they eat to maintain their own bodies. From the feed thus used up the farmer gets nothing but the "society" of the animals and their manure. The profits come only from the amount of feed used in addition to maintenance needs.

Linseed Oil Meal supplies the excess protein requirements at maximum profit. And in addition, it is a splendid conditioner. It's "the tiny weight that tips the scales."

Adding Linseed Oil Meal to each ration costs little, and it brings such good gains that you simply cannot afford to miss this source of extra profit. Any number of experiments and practical experiences will prove it. Consider these brief summaries:

Proved worth $85 a ton when added to a corn, tankage and chopped alfalfa ration for pigs.—Wisconsin.

Showed a profit of $22.65 in one month when added to ration for 8 cows.—Iowa.

Showed a profit of $12.79 a ton when added to a ration for fattening baby beeves.—Minnesota.

Showed a profit of $7 a ton in fattening lambs.—Nebraska.

Perhaps you have been feeding only a very small amount of Linseed Oil Meal as a conditioner. You should be feeding more for its protein value. At any rate "get straight" on Linseed Oil Meal—See just where it will fit in with the feeds you now have and make them far more profitable. Send for our new book that is being read with interest and profit by thousands of farmers—

"How to make money with"

Linseed OIL MEAL

By PROF. F. B. MORRISON

Asst. Director Wisconsin Agricultural Experiment Station and Prof. of Animal Husbandry, University of Wisconsin. Author, with W. A. Henry, of the Recognized American Authority on Stock Feeding — "Feeds and Feeding."

Your copy is ready for you and it will cost you nothing. By all means send for it, for it may add scores or hundreds of dollars to the season's feeding profits.

Are You Getting Clean Milk?

If you are straining milk through cloths or fine mesh screen strainers, you are not removing all the dirt and sediment from the milk.

Thousands of milk producers have found by actual test that the

Dr. Clark
Purity Milk Strainer

is the only strainer made that can possibly remove ALL the fine dirt, muck and other sediment from milk. These results guaranteed or your money refunded.

Purity Milk Strainers are used by the largest milk producers in the United States, including Borden, Van Camp, Carnation, Mohawk, and Sheffield Farms Dairies, and thousands of individual producers.

Made in two sizes:—10 quart and 18 quart. Ask your Dealer, or write us for descriptive circular and prices.

Purity Stamping Company

Barn Needs Ventilation

I have a young horse that is not doing any pulling since all my farm work is done. He is standing in the barn and in rainy weather he sweats all over his head and front part of his body. I feed him timothy hay and one quart of oats twice daily. Will you please tell me what is the matter with the horse and what I should feed him?—G. S., Luzerne Co., Pa.

The difficulty which you are having with your horse perspiring during rainy weather is, no doubt, due to lack of ventilation in your barn. This can very readily be overcome by putting in a ventilating shaft in the roof of the barn. This need not be an expensive type of shaft. A flue leading from the barn thru the roof made out of boards about six inches square will be sufficient or a tile or a stove pipe might be used.

In addition to this ventilating shaft, it might be well to take the manure out of the stable daily instead of allowing it to accumulate. I would also suggest that the horse be permitted to get out for exercise in the yard daily, and that a free circulation of air be allowed in the barn while the horse is in the yard.—W. H. Tomhave.

Will Sell Duroc Winners

OF SPECIAL interest to Duroc Jersey breeders will be the combination show and sale of purebred red hogs at the State Farm Products Show in Harrisburg, January 19 to 23.

Thirty-one bred gilts, which are junior and senior pigs from eight consignors, will be sold Wednesday forenoon, January 21 at 9:30 o'clock. All of the gilts will be judged immediately after the show and awarded $150 in prizes. They will remain on exhibition the entire week. These pigs have been carefully selected by a special committee and are approved by the animal husbandry extension specialists. The exhibition and sale will be held in the Duco Building.

At six o'clock Wednesday evening Duroc breeders will join with other swine growers in a joint banquet in the Knights of Columbus Building. Immediately following the banquet the Duroc men will have their annual business meeting in the Department of Agriculture offices. Headquarters for breeders of the red hog will be maintained all week of the state show in the swine exhibition building, according to J. M. Fry, Sunbury, secretary of the Pennsylvania Duroc Jersey Breeders' Association.

With Berkshire Breeders

THE Berkshire Breeders' Association of Berks County, in a meeting held at the office of County Agent Adams, adopted tentative plans for a county sale, providing the state sale at Harrisburg turns out successfully.

Plans were outlined for several definite projects, which are to be carried out within the next few months, with the aid of L. C. Madison, animal husbandry extension specialist. These projects should be of much value to Berkshire breeders in the county.—B.

Starts T. B. Work

BY THE signing up of ninety per cent of the farmers in West Chillisquaque Township, Northumberland County joined the ranks of those counties in Pennsylvania which are seeking to eradicate tuberculosis by the modified accredited area plan. According to acting County Agent F. W. Myer, the members of the committee responsible for the successful outcome of the work are: Murray Miller, Chairman; Angus Fairchild, Frank Pardoe and Paul Albright.

The Livestock Situation

THE year 1924 was one of promise rather than of actual fulfilment for the average livestock producer, declares the United States Department of Agriculture in a review of the situation. Conditions in the industry showed improvement, on the whole, over 1923, but the situation nevertheless afforded ample opportunity for the critic and the pessimist. Practically no kind of livestock showed a definite price trend thruout the year, and there was more or less confusion and uncertainty for the stockman.

The relatively short corn crop and resulting high prices had a slightly stimulating effect on prices, but drove hogs to market in unprecedented numbers and materially reduced the number of cattle on feed.

The cattle man probably had least cause for rejoicing, the department says. Beef steers started the year well and in April sold higher than at any corresponding period since the 1921 break. Toward the end of June, however, prices fell below those of 1923, and with the exception of only two or three weeks in midsummer, continued so until the first of December.

Too Many Hogs

The hog market burdened with excessive numbers during the first five months of the year fell considerably below the pre-war average of prices. The pig survey made by the Department of Agriculture in the spring indicated a substantial reduction in breeding and gave promise of a more normal production. Market receipts decreased in the autumn, but continued strength in corn prices sent hogs to market toward the end of the year in unprecedented numbers. Receipts at Chicago on a single day around the middle of December were 122,000 head, which was by all odds the heaviest run ever received on any one day. The net decrease in hog receipts for the first eleven months of 1924 as compared with the corresponding period of 1923 was only 1.4 per cent.

Sheep Men Envied

The sheep man was the envy of all stockmen in 1924. His industry thoroly liquidated in 1921, a world shortage of both sheep and wool in 1923, a brisk demand for lamb and mutton, and a protective tariff of 31 cents per pound on wool, it was not surprising that both lambs and wool closed the year higher than at any time since 1919. Moreover, thousands of unborn lambs and millions of pounds of wool which will not be shipped for another four or five months, have been contracted for at prices which the growers considered too favorable to reject.

Smoke Your Own Hams, Bacon, Sausages
IN THE ORIGINAL
NATIONAL GIANT PORTABLE SMOKE HOUSE AND SANITARY STORE HOUSE
Beware of Imitations or Experiments!
This wonderful smoke house is portable. Can be operated in and out-doors. Runs on sawdust, cobs and little bark for seasoning. Positively the best way to smoke hams, bacon, sausages, fish.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

WORMS.—Please give me a remedy for expelling worms from horses and how can I condition my horses as they get full ration of corn and good cured corn fodder? I have no hay this year. Would you advise change of feed? These horses are not doing any work to amount to anything now, but do not keep in as good shape as before. Last spring they were fed and watered regularly, their stable is warm and comfortable. —D. M. M., Dover, Del. Your horses should have change of feed, besides they should have daily exercise. Feed some roots, some oil meal, and plenty wheat bran, salt them regularly, this will increase thirst and if they drink plenty of water their bowels and kidneys will act freely; furthermore, exercise will increase bowel action. In order for me to treat your wormy horses intelligently I must know what variety of worms are affecting them, because the treatment is not alike for all kind of intestinal parasites. If they have pinworm, flush rectum with soap and water, then use strong solutions of common salt, or quassia, or lime water. Oil of chenopodium, or turpentine, given after fasting the horse, and followed by giving a quart of raw linseed oil is quite effective treatment for intestinal parasites but your veterinarian should administer this treatment, for safety. Your horses' teeth may need floating, it will do them good to be groomed daily.

ACTINOMYCOSIS — LUMP JAW. I have a two-year-old heifer that has a lump on her jaw that started three months ago. It is not open and is quite large. Will you please tell me what it is and best treatment for same?—H. G., Honesdale, Pa. Doubtless you have a typical case of lump jaw. Actinomycosis is an infectious disease due to a specific fungus and characterized clinically by the appearance of either connective-tissue enlargements, bone growths, or abscesses which usually occur about the head of the animal affected. The disease is not contagious. This fungus grows on various kinds of grasses, but particularly on the awns and glumes of barley and related grasses, especially when these have grown on bottom lands subject to overflow. A common name for it is the ray fungus. Treatment: Superficial actinomycomas are treated surgically by extirpation and subsequent cauterization or tincture of iodine applied to the wound. Bone enlargements are usually incurable. Her flesh is fit for food.

STUNTED PIG.—I have two Duroc Jersey pigs. One does not grow, altho it eats plenty. Could it have worms?—Mrs. M. A., Chester County, Pa. If your pig weighs eighty pounds or more give a teaspoonful of turpentine in some sweet milk in the morning three times a week for a week or two. This is the least expensive treatment for round worms. Mix equal parts of gentian, ground limestone rock, common salt together and place it within their reach, or mix some in their feed twice a day.

HORSE FOND OF BARK OF TREE —Some time ago I bought a horse; he is inclined to chew the bark off trees. I feed him salt and he is fond of it. A. B., Berks County, Pa. Mix equal parts of powdered gentian, quassia, cinchona, baking soda and common salt together. Give him two tablespoonfuls at a dose in ground feed two or three times a day; also feed some roots.

Down They Go!

I've Cut My Prices Again this Year

Here's good news for the man who is going to need Fence, Gates, Steel Posts, Barb Wire, Roofing or Paint this year. You can save a lot of money by getting my New Cut Price Catalog before you buy. It's a big book — over 100 pages of bargains — the greatest variety of high-quality Fences, Gates, Steel Posts, Barb Wire, Roofing and Paints ever put out by any factory. No matter when or where you expect to buy, get my Cut Price Book first. I want you to see the big money my Direct-from-Factory-Plan will save you.

Over 850,000 customers buy from my factories—they save all middlemen's profits—get the benefit of my low manufacturing costs, get the ***better quality*** that has made Jim Brown's goods famous — all for a great deal less money than they have to pay elsewhere—and don't forget—

I PAY THE FREIGHT

The low prices shown in my CUT PRICE CATALOG are all you pay — nothing extra for freight — I deliver the goods right to your freight station.

For the past 35 years I have been giving farmers bigger value than they could get anywhere else — that's why my business has grown until it is the biggest of its kind in the world.

Fill out and mail coupon—get my New Cut Prices—see the wonderful values I am offering on over 150 styles of my famous Double Galvanized Fence that lasts two or three times as long as ordinary fence—Carbon Steel Gates that last a lifetime. Steel Posts that are bigger, heavier, and much stronger. Genuine ***Asphalt*** Roofing—***Wearbest*** House and Barn Paint—everything of the ***Highest Quality*** and at prices that are way below what you pay for ordinary quality, and everything sold on a ***Guarantee of satisfaction*** that lets you be the judge.

No matter where you live, you can save a lot of money and get your goods quickly as I ship promptly from my 3 big factories at Cleveland, Ohio, Memphis, Tenn., and Adrian, Michigan, also shipping points at Kansas City, and Davenport, Iowa. You owe it to yourself to get my Cut Price Catalog before you buy—it's yours for the asking.—*Jim Brown.*

Four things to act on—bovine tuberculosis, the Japanese beetle, the Oriental moth, the European corn borer. Tell your assemblyman about them. See page three.

He doesn't come around any more

But Tin Pedler irresponsibility still exists

REMEMBER the tin pedler who used to sell miscellaneous pots and pans? He seldom comes around any more. For your wife found that really dependable wares were those bearing a responsible manufacturer's trade-mark. The first cost may be a few cents higher, but over the year there is a real cash saving.

With "tin pedler" or unbranded oils, too, there may be a small saving in price. But once the oil is in your motor, the saving disappears. Neither "specifications" nor mere looks can make one oil equal to another.

This season, the service you get from your car, truck, or tractor will largely depend on the oil you are buying right now. Will it be "tin pedler" oils and the chance of breakdowns and lay-ups? Or Gargoyle Mobiloil and dependable operation, day in and day out?

Real Economy

This year, more farmers than ever before are stocking Gargoyle Mobiloil for the work ahead. They know from performance that Mobiloil will save them real money in spite of the few cents more it costs by the gallon. And that's why many of them will make a special trip to town—if necessary—to get their supply of Mobiloil.

Gargoyle Mobiloil is made by the foremost lubrication specialists in the world. "Tin pedler" oils are frequently job lots, coming from no one knows where.

The crude stocks used for Mobiloil are chosen solely for their lubricating value. The refining methods employed for Mobiloil preserve the lubricating value of the oil intact.

The uniformity of quality and body of each grade of Mobiloil is assured through many added steps in refining which are rarely, if ever, taken in the production of other oils.

These and other factors explain why the correct grade of Gargoyle Mobiloil almost invariably shows a cash-saving in operating costs over other oils. And that economy is *most* striking when the other oil's price per gallon is lowest.

Gargoyle Mobiloil is sold only by responsible dealers and marketers. The correct grade for your automobile, motor truck or tractor is clearly specified in the Chart of Recommendations. Every Mobiloil dealer has the Chart. For real economy make the Chart your guide.

Chart of Recommendations

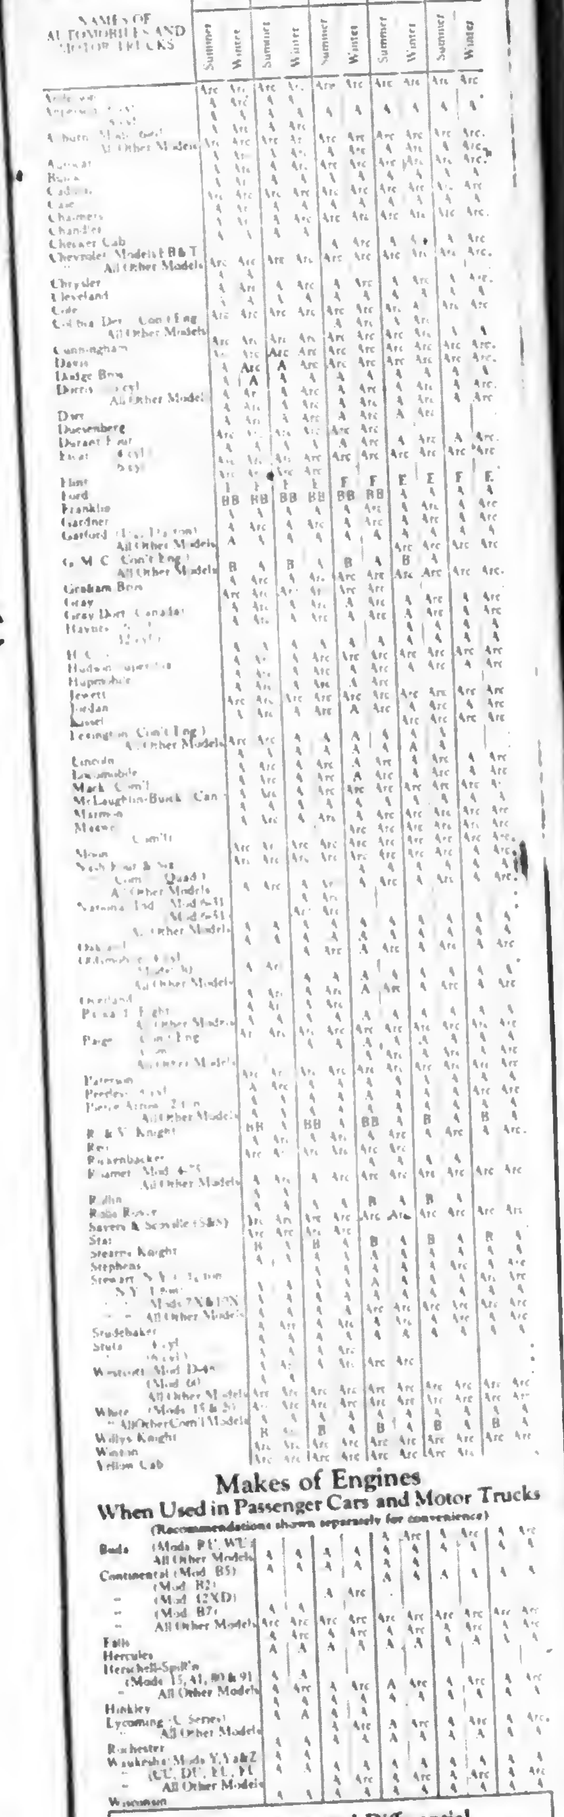
(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger cars and motor trucks are specified in the Chart below.

How to Read the Chart:
E means Gargoyle Mobiloil "E"
Arc. means Gargoyle Mobiloil Arctic
A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
BB means Gargoyle Mobiloil "BB"

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures are experienced.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.



Makes of Engines When Used in Passenger Cars and Motor Trucks (Recommendations shown separately for convenience)

Transmission and Differential

For their correct lubrication, use Gargoyle Mobiloil "C," "CC" or Mobilubricant as recommended by complete Chart available at all dealers.

Domestic Branches:

New York Main Office	Milwaukee
Albany	Minneapolis
Boston	New Haven
Buffalo	Oklahoma City
Chicago	Peoria
Dallas	Philadelphia
Des Moines	Pittsburgh
Detroit	Portland, Me.
Indianapolis	Rochester
Kansas City, Mo.	St. Louis
	Springfield, Mass.

GARGOYLE Mobiloil

Make the chart your guide

Tractor LUBRICATION

The correct engine lubrication for the Fordson Tractor is Gargoyle Mobiloil "BB" in summer and "A" in winter. The correct oil for all other tractors is specified in our chart. Ask for it at your dealer's.

What about T.B., Beetles, Moths, Borers?

The Legislature Has a Momentous Question to Decide during This Session

By C. L. WHITE, Associate Editor

THE eradication of bovine tuberculosis, and the fight on the Japanese beetle, the Oriental peach moth and the European corn borer, are matters that are commanding the attention of all forward-looking Pennsylvania farmers at this time.

Within the next few weeks the Legislature, by its action on the bill appropriating funds for the use of the Department of Agriculture, will decide whether or not the state is to meet the emergency brought about by the presence of these four great menaces to the welfare of the people of Pennsylvania.

The direction of the fight on these destroyers is left largely to the Bureau of Animal Industry, and the Bureau of Plant Industry. If the men in charge are provided with funds to carry out the work assigned to them they can protect the health of the people and the welfare of the farming industry. But if they do not receive proper financial support there is every reason to believe that the four pests mentioned will take toll far greater than the small amount now needed to put them under control.

Both in its menace to the welfare of the state and in the size of the appropriation needed to fight it, bovine tuberculosis is the most important of the four pests under consideration. There are now 150,000 tubercular cattle in Pennsylvania. Link that statement with the estimate of medical authorities that twenty-five per cent of tuberculosis in young children comes from the tubercular cow and you have the main reason why every effort should be made to clean up the herds of the state.

There Are Other Reasons

That is the outstanding reason, but there are others of great importance. Pennsylvania ranks third in the United States in the value of her dairy products, but is fourteenth in the number of dairy cattle under supervision for the control of tuberculosis.

When other states have completed their clean-up programs they will have to protect themselves by boycotting livestock and dairy products from states which are still peddling the germs of tuberculosis. Of utmost concern to Pennsylvania dairymen is the fact that New York state has appropriated large sums for the clean-up of the Empire State. Very soon a regulation will probably go into effect shutting out from the New York City market all raw milk from untested herds. Unless we move quickly we may expect that many thousands of Pennsylvania dairymen will find themselves with big herds of cattle and lots of milk but no market.

No sound program of dairy improvement can be undertaken in a herd not free from disease. Tubercular animals waste the feed that is given them, for they cannot resist disease and produce milk efficiently at the same time. Of course, in its final stages the disease kills the animals, and it sometimes seems [illegible] the more highly-bred an animal is the more subject she is to the disease.

The Particular Problem in Pennsylvania

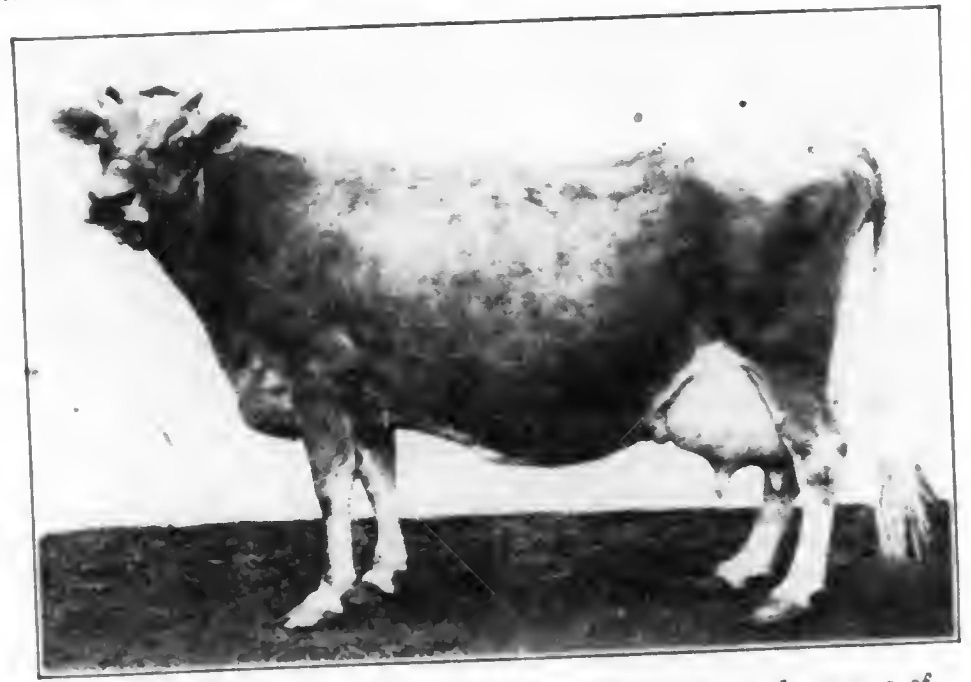
The problem in Pennsylvania is not one of convincing farmers that their herds should be freed from disease. Rather, all that needs to be done is to provide the means to clean up the herds whose owners have asked to have them tested.

No less than 225,000 Pennsylvania cattle are now signed up awaiting test. This number is about fifteen per cent of the total cattle population of the state. If adequate funds are provided another forty per cent will be ready for test during the next two years. About sixteen per cent of the state's cattle are now under supervision, i. e., they have been or are being tested.

Now, in regard to the insects. Is all this alarm about them merely an ill-advised "scare," or do we really need to be concerned about them? The quickest way to decide is to examine the facts.

Take first the Japanese beetle. The adult beetle itself attacks over 200 different species of plants, and in the larva stage it causes great damage to grass fields and lawns. A few of the plants of economic importance which the insect feeds upon are: apple, cherry, plum and peach trees; corn, soy beans, red clover, alsike clover, alfalfa, asparagus, lima beans, string beans, grapes, raspberries, blackberries; various ornamental shrubs, flowering garden plants, shade and timber trees.

The Japanese beetle eats both fruit and foliage. A thriving peach tree may be left after an attack with nothing but browned skeletons of leaves and no sign of fruit except the bare peach pits hanging by the stems. The writer has counted more than fifty beetles working on a single apple, this cluster of insects being but one of thousands like it at work in the same orchard.



The finest of purebred dairy cows are as susceptible to the germs of bovine tuberculosis as the poorest scrubs.

Control Should Be Supported or Else—

Basing the statement upon the damage that has actually been done in the infested area, there is almost no limit to the devastation that may be done by the Japanese beetle if control work is not adequately supported.

It may be asked, Isn't it throwing good money away to try to control the beetle?

The answer, as far as actual eradication is concerned, is Yes. The pest could have been eradicated at first, but we did not act quickly enough.

At the present stage of affairs there are three things to do:

First, prevent the artificial spread of the pest; i. e., by careful supervision of products leaving the infested region, prevent the development of new areas of infestation. We must confine the conflagration to its present area and not let the sparks start a dozen other fires.

Second, propagate the parasites that prey upon the beetle, so that there will be enough of them to prevent the breeding of large numbers of beetles.

Third, continue research to find poisons and repellants to protect individual crops. There is little doubt that a way will soon be found to protect plants from the Japanese beetle about as easily as potatoes are now protected from the Colorado potato beetle.

Regulation of Shipments Will Limit Spread

If, thru strict regulation of fruit, vegetable and plant shipments, the beetle is restricted to its natural annual spread of from five to fifteen miles, it may not get as far west as Harrisburg for five or six years, or more. By that time the parasites will have gotten such a start that the pest will not be considered a serious menace, and economical methods will have been worked out for the protection of individual crops which may be attacked.

On the other hand, if the spread of the beetle is not restricted by proper regulation of shipments, the whole state may be peppered with the pest before enough parasites can be propagated or practical protective methods devised.

The case of the Oriental fruit moth is somewhat different from that of the Japanese beetle. The moth already has covered a large part of southeastern Pennsylvania, being found as far west as Bedford County. It is the larva form of this pest that does the damage by killing the growing tips of trees, and especially by burrowing into the peach itself, making it unfit for use. In some Pennsylvania orchards as high as seventy-five per cent of the peach crop has been destroyed.

Orchards Must Be Protected

The problem here is simply one of devising practical and economical methods of protecting orchards. Much work along this line has already been done, but a cheap and unfailing method of control is yet to be discovered. Control measures for use in this state must be worked out in this state; observations made by research men in other sections do not apply here because the habits of the moth are profoundly affected by local soil and climatic conditions.

The newest of the three dangerous insect pests is the European corn borer. It was first found in Girard Township, Erie County, Pennsylvania in 1919. Now the corn borer covers 1999 square miles of the state and has spread into four counties. The pest is established in all the territory bordering Lake Erie, the infested area forming a belt around the lake from forty-five miles wide in Pennsylvania to more than a hundred miles on the Canada side.

Both Stalk and Ear Are Attacked

Last year observers of the State Department of Agriculture found two or three corn borers in nearly every stalk in some Erie County corn fields. The borers bore thru the stalk, weakening it so that it is easily broken down by storms; they break off the tassels, interfering with pollination; they bore into the ear, making it grow crooked and preventing the formation of the kernels. The effect on the [illegible] to make it a nubbin. In areas of heavy infestation in Canada as much as a third of the corn crop has been lost.

Fortunately for Pennsylvania, Erie County is not an important corn growing territory. The havoc which the corn borer might bring to the great corn growing sections of the state may easily be imagined. The object of the campaign against it should be, first of all, to enforce a quarantine which will protect the southern and eastern parts of the state.

OUR FARM

Where an Editor Works and Thinks

OUR FARM is covered with a blanket of snow six to eight inches deep. On top is a crust so hard that one can walk over the place easily. I made a visit to all the trees the other day and found no indication of damage by mice or rabbits, altho there were plenty of tracks. The protectors evidently were not inviting. While city people complain about the inconvenience which a deep snow causes, farmers know that it is a valuable winter covering for fields.

* * *

I REMEMBERED while walking thru the peach orchard a rather sad experience I had with deep snow in the first peach orchard I planted on the old home farm. There was a short, steep part of a field which I thought would be good for peaches, as it faced the east. I terraced it by plowing four strips along the side. These strips were plowed and replowed until the hillside took the shape of four steps, each about ten feet wide and two feet or more high at the back side. Rows of trees were set on these "steps" and they started nicely. All went well the first two years, but during the third winter we had a deep snow which drifted badly from the west. On going out after the storm only a few tops of branches could be seen, the three-year-old trees being completely covered with snow. I felt rather pleased at this because they were loaded with buds and as the weather was very cold I figured that the snow would protect them.

* * *

BUT the story is not yet all told. That snow stayed for weeks and settled gradually. After the snow on the field above and below the trees was all gone, there was still snow around the peach trees, or rather where the trees were. But the trees were a sorry, mutilated mess of stubs. The branches had been broken off by the settling snow so that nothing was left but the split and broken bodies. That ended my first peach and plum venture. I never got a single fruit from those trees and nothing of the kind was ever planted on those terraces. The scheme was a good one in every way except in one vital factor, and that one had not been thought of in the planning.

* * *

THE annual supply of catalogues is again coming in, and we find the usual enjoyment in studying them. Pictures and descriptions of new varieties are always interesting, and it is worth while always to try some of them out, but the wise gardener will plant the tried and true for main crops. There are enough reliable and well established seed houses and nurseries in the country now so that it is not necessary for any one to risk his money and work in planting questionable seed and stock.

* * *

THE plan now is to conduct our thirty-acre farm without horses. We have taken the first step in this direction and will have more to say about it as time goes on. We have it worked out in theory, and if there is no unseen factor to bob up and cause defeat, such as is mentioned in the above peach tree story, we feel that we will be relieved of much trouble and expense. We expect to be told—in fact, we have been told—that it can't be done; but we are going to try it.

* * *

LAST year we noticed that some of the leaves on many of the young apple trees had some leaf disease which caused them to fall prematurely. Three or four were stripped of every leaf by caterpillars. We did not spray any because we felt it unnecessary as no scale was present. This year we shall spray them, even tho they are not yet bearing, so as to keep the leaves healthy thruout the season, and also to kill insects. Anything which reduces the leaf area is harmful to trees since all the material which goes into tree growth and fruit development first passes thru the leaves.

* * *

ONE of the difficulties connected with developing a heavy sod in a rotation and plowing it down for crops such as potatoes and strawberries is the number of destructive grub worms likely to be present. Last year we put our potatoes on alfalfa land and grubs did some damage. Two years ago they nearly ruined our setting of strawberries. Nothing seems to give the white grub greater pleasure than to eat a strawberry plant off just under the ground. The grub stays in the soil as a grub two to three years before it emerges as a June beetle. Because of the grub, one-season cover crops are better than sod for truck farming.—R.P.K.

Adams County Show

ACCORDING to County Agent Underwood, a larger number of exhibits, with closer competition and much keener interest among the thirty exhibitors, contributed to the success of the annual corn show held in McSperrytown, Adams County. After the judging was completed and the prize money, donated by the Farmer's Bank, had been awarded, Nicholas Schmitz, agronomy extension specialist, gave a talk on corn breeding and seed selection. He stressed the importance of taking care of good seed corn.

Lancaster Sure Crop and Golden Queen have been found to be the most desirable corn varieties to raise in Adams County, according to Mr. Schmitz, and he commended the exhibitors on the progress they had made in developing these two varieties. In variety tests in Adams County, along with variety tests in other southeastern Pennsylvania counties, Lancaster Sure Crop and Golden Queen have been found to be the high yielders. They are more resistant to disease because of having less soft starch and are much more desirable because of being easier to husk.—B.

The Prospects for 1925

THE Employment Service Bureau of the U. S. Department of Labor in a bulletin reviewing the labor situation in each of the states has the following to say regarding the outlook in Pennsylvania:

"The industrial prospects for 1925 are especially bright in the building construction lines. Anticipated programs will include factory buildings, stores, homes, bridge building, street work, and highway construction. The outlook in the steel industry is very good. The leading steel industries in the state report large increases in unfilled orders for all kinds of steel products for delivery in 1925. Future orders in the steel industries presage corresponding improvement in the industries allied with them, such as bituminous coal, coke, pig iron, etc.

All Expect Better Business

"There is not an industry in Pennsylvania that does not expect better business in 1925 than in 1924, and the demand for skilled labor will be greater. The outlook for full employment of unskilled or common labor is favorable, and it is thought that after April 1, 1925, all unskilled workers will be able to find full-time employment.

"There will be an increase in the amount of public works completed in 1925 over that of 1924. Philadelphia and Pittsburgh have large public works programs planned, running into many millions of dollars, which include new boulevards, bridges, and city subways.

Fifty Millions for Roads

"The Commonwealth of Pennsylvania expects to have a bond issue of $50,000,000, which was recently approved, ready for expenditure on the extension of its highway system and program. To this expenditure will be added co-operative appropriations from the federal government and from the several counties in the Commonwealth.

"It is expected by competent observers that the farmers of Pennsylvania will not increase, but may possibly reduce in certain districts, the planting acreage in 1925. The bituminous coal industry will probably operate between forty to sixty per cent capacity thruout 1925, which under existing conditions, is about normal production. The anthracite mines in Pennsylvania will probably operate at normal capacity during 1925."

THE CHEERFUL PLOWMAN

The R. F. D. Man

THE man who drives the auto that brings our rural mail looks often half depleted, and wilted out, and pale; sometimes he looks disgusted as if the world were wrong, as if he couldn't muster the shadows of a song. Well, there's an ample reason for him to have the blues, perhaps a dozen reasons, a hundred, if you choose.

For instance, many people put letters in the box with twenty-seven pennies in disconnected flocks, then think the hurried driver should gather up the mess, then stamp and start each letter to its required address! Some people put in letters and then inanely fail to raise the flag portraying the presence of the mail, and so of course the driver if he has naught to drop has no real way of knowing that he's supposed to stop. The next day angry people await him at the gate and threaten to report him to minions of the state!

Sometimes he makes an error—perhaps his car is sick or someone in the office performed a stupid trick—and then there falls upon him a shower of epithets, a bunch of two-edged phrases as sharp as pressing debts!

Myself, I have determined that I shall never fail to have the best of patience with him who drives the mail. His job is done as perfect as mine, with some to boot! There's too much chronic kicking along our rural route.—J. Edw. Tufft.

F.O.B. Detroit

You Pay For a Fordson Whether You Own One or Not

You pay for it in extra time and labor required to do your farm work without a Fordson;

Pay for it in injury and strain to horses, caused by putting them on work that could be done more quickly and easily with mechanical power;

Pay for it in smaller acreage tilled; in land less thoroughly cultivated, due to bad weather, holidays and lack of help; Pay in extra time required for the hundred and one jobs that steal time from money crops.

A Fordson is portable power that pays for itself many times over. It costs more to be without one than to own it.

For wood cutting, manure spreading, feed grinding, clearing land, pulling out old fences—in brief, for mobile power when and where needed, a Fordson is the best investment you can make in farm machinery.

Those who bring sunshine into the lives of others, cannot keep it from themselves—J. M. Barrie

The Susquehanna's Power

FOR unknown ages the beautiful Susquehanna has flowed thru the mountains and valleys of Pennsylvania, serving the inhabitants thereof in different ways from the time of the earliest settlement but never contributing to the fullness of its capacity. Now a mighty dam is to be constructed just below the Mason and Dixon line and the potential power which has been running to waste for thousands of years is to be made to turn the wheels of industry. It is planned to develop 240,000 horse-power at the start and this will be increased after a time. It is said that the major part of the power thus developed will be used in Philadelphia and for the electrification of the railroads entering that city. The proposition is a part of the Giant Power proposition and has the approval of the state and federal Giant Power Survey authorities. All this is of interest to farmers since it is a part of the general plan for electrifying the whole country. Every industry is seeking better and more economical machines and power in order to reduce the amount of time and labor necessary to production and farming is no exception to the general rule.

Neighborhood Libraries

IT IS said that the first public library in this country was promoted by Benjamin Franklin who, in 1731, went from door to door in Philadelphia with a subscription paper raising money to establish a library. He succeeded in raising a very modest sum which was expended for books. These were housed in a room furnished by an interested friend and were loaned to the public at a nominal cost. Since then the public library has become a national institution and almost every city and most towns of any considerable size have libraries where those living in close proximity may borrow the books they wish.

The rural sections of the country, however, are not blessed with library facilities. Probably two-thirds of the population lives beyond the reach of such a service, and this presents a situation which will some day be considered intolerable. A library will soon be considered a public necessity, as much so as good roads and good schools. Every man and woman, every boy and girl, should have easy access to books, and this places upon every community the duty of making some move to start a library.

An Open Letter

TO THE Members of the Pennsylvania Legislature:

Included in the budget of the State Department of Agriculture, which will be acted upon by you during the present session, there will be provision for funds to be used in the eradication or control of four destructive pests which have come to be of immense importance to the people of Pennsylvania. These include bovine tuberculosis, a disease of dairy cattle communicable to children thru milk, and three exceedingly dangerous insects from foreign countries which have recently established themselves in certain parts of the state, viz., the Japanese beetle, the Oriental moth and the European corn borer.

There are approximately 150,000 tubercular cattle in the state. The best interests of the public require that funds be provided for the detection and destruction of these animals. Pennsylvania dairymen have shown themselves willing to bear more than their full share of the expense of replacing diseased cows, but the funds made available to the Bureau of Animal Industry for the supervision of the work of eradication have been inadequate. This state lags so far behind others in the campaign against tuberculosis that there is danger of her livestock and dairy products being shut out of the large markets. Altho third in the value of her dairy products, Pennsylvania is fourteenth in the number of cattle under supervision for the control of this disease.

Careful estimates indicate that $2,000,000 will be needed during the coming biennium to cover the expense of cleaning up the herds whose owners have already requested that their cattle be tested for tuberculosis. If less than this amount is made available during the present session the eradication program, so important from both humanitarian and economic standpoints, will be seriously delayed.

The Bureau of Plant Industry has charge of the fight on the three insect pests, the beetle, the moth and the borer. It co-operates in this work with other states affected and with the United States Department of Agriculture.

The Japanese beetle is potentially one of the most dangerous of man's insect enemies, as it attacks a great number of important farm crops besides shade trees, lawns, gardens and forests. It may be expected to do enormous damage if allowed to spread from the present area of infestation around Philadelphia before practical control measures have been evolved. At least $150,000 will be required to finance the state's work against the beetle during the next two years. If the federal government should fail to provide as much as it has in the past, twice the sum mentioned will be needed to prevent the beetle from spreading quickly over the whole state.

The Oriental moth has destroyed as much as seventy-five per cent of the peach crop in southeastern Pennsylvania orchards. Research work looking toward the discovery of control methods is financed from the operating fund of the Bureau of Plant Industry.

The European corn borer in northwestern Pennsylvania has, as yet, done little damage. A very small amount, $15,000, should be sufficient, with the aid given by the federal government, to keep the pest from reaching the more important corn growing counties during the next two years.

This whole problem of disease and insect control would be very simple if the germs and bugs were not increasing in numbers and destructiveness by geometrical progressi But they do not await our convenience, hen we petition your support for the financi needs of the Pennsylvania Department of A riculture, and we ask particularly that t work against disease and insect pests be pe mitted to proceed rapidly before further da age is done.

Believing that, in a case like this, imm diate and decisive action is synonymous wi true economy, we remain,

Very respectfully,
PENNSYLVANIA FARMER

A Farmers' Commission House

THE past five years has seen myriads co-operative enterprises launched. Th have taken almost every conceivable for but, so far as we know, it remained for twe ty farmers of Gloucester County, New Jerse to form a co-operative produce commissi company. These producers of vegetabl conceived the idea that it would be a go scheme to join together, hire a manager, a start in the business of selling direct to j bers and the trade right in the heart of o of the biggest produce markets in the city Philadelphia. This they did by employi Warrington Brown as manager, and openi a depot at 110 Dock Street. They began May, 1924.

The first season was pronounced a succe by those who engaged in it. The produce being right next to the trade, got first-ha and definite information as to what the ma ket demands in the way of packing and gra ing, and those who were farsighted enough realize what was to their best intere promptly responded to the demand and joyed a good trade and profitable retur Most of the original members have remain in the organization, while new ones have gla ly taken the places of the few who have dro ped out.

The manager states that the only we feature of the proposition is the lack of a f supply of goods to sell during the wint months. Most of the members are mark gardeners whose products are marketed fr May to October. What they need now is pr ucts such as potatoes, apples, cabbage, bee carrots, etc., which have been stored for t winter market. It will be interesting watch the development of this venture a to learn whether this plan will bring larg average returns than does selling thru th regular trade channels. It should be sa that the manager had sixteen years' expe ence in the wholesale produce market befo taking charge of this co-operative business. is extremely doubtful whether a greenho could make a go of it in a business so co petitive as is the wholesale commission bu ness.

Muscle Shoals Again—or Yet

THE Senate, last week, passed the Und wood Bill authorizing the secretary war to lease the Muscle Shoals plant for term of fifty years at a rental based up the cost. Whether the House will pass t bill in its present form is a doubtful matt Neither the Ford offer nor the present b meet the approval of the national conser tionists. A bad feature of the Underwo Bill is that it suspends the federal water po er act in this case and grants the lessors t right to sell surplus water power at i terms. So important is it that the natu resources of the country be conserved a developed in the interest of the whole peop rather than given over to private exploitati that this question of the disposition of Mus Shoals is of far reaching importance. It is far greater importance that the people of t South be given a square deal in this mat than that there be immediate returns to government treasury.

Washington Letter

PRESIDENT IS OPTIMISTIC.—The President's agricultural fact finding commission is making strenuous efforts to solve the farm relief problems. President Coolidge indicates his confidence that the program suggested by the conference can be put thru Congress at this session, thereby eliminating the necessity for an extra session. He believes that the recommendations will be of such a character that they can readily be embodied in a bill that can be enacted without long discussion.

Senator Borah is not so optimistic in this regard as the President. He sees no probability of action on farm legislation this session, and is urging the President to call an extra session immediately after March 4, to enact farm legislation. With no extra session, Senator Borah points out that there could be no legislation until the new Congress meets next winter.

DEMAGOGUES AND STATESMEN.—Replying to the assertion of an eastern senator that the farmers do not need legislation, Senator Borah said: "When senators rise on this floor and call attention to conditions prevailing in the farming industry and plead for remedial legislation, they are denounced as demagogues. When others stand up and demand protection for the railroads and the manufacturing industry they are called statesmen."

Senator Borah favors legislation that will provide the farmers opportunity to develop a nationwide system of co-operative marketing thru government supervision and regulation, but he regards extravagant taxation as the paramount issue.

A GOOD EXAMPLE.—A movement to secure better enforcement of the prohibition law was started at the White House a few days ago, when a committee representing the citizens' committee of 100 for law enforcement presented resolutions commending to the people and particularly to their official representatives the attitude of the President in his conscientious obedience to the provisions of the Eighteenth Amendment in the hope the example of the first citizen of our country may induce those who are now violating the prohibitory statutes to accept his leadership in conduct, and to indorse in practice the integrity of his fidelity of the supremacy of the law.

It is the aim of the committee to induce all public officials to obey the law themselves and to enforce the laws of the land. President Coolidge gave them to understand that disobedience to law means the doom of any nation.

BELIEVES IN CONGRESSMEN.—Dr. T. C. Atkeson, of the National Grange, who for many years has had a close-up view of Congress, says he believes that ninety-nine per cent of the men in Congress are trying as best they can to serve the people and enact such laws as in their opinion are for the public good.

An increasing number of men in Congress are not only living up to the law, but are standing publicly for vigorous enforcement of the Eighteenth Amendment. As one congressman recently declared, the Eighteenth Amendment will not be repealed, not in a thousand years.

MILLIONS FOR FARMER TRAINING.—Eighty-five thousand children are receiving vocational training in agriculture, according to C. H. Lane, chief of the agricultural division of the Federal Board of Vocational Education. There are 3000 teachers teaching agriculture in the public schools. The federal government appropriates $3,000,000 for this purpose and the state double this amount. It is Mr. Lane's belief that this vocational training in agriculture is developing a large group of farmer boys who will be far better qualified to manage farming operations than were their fathers before them, and it is also having an uplifting influence upon farm life in general.

AGRICULTURE IN HAWAII.—A remarkable interest is being shown in vocational agricultural education in the Hawaiian Islands, says Mr. Lane, who has recently returned from the islands. Farming in Hawaii is carried on by large corporations under a system which is described as a benevolent autocracy. The employes of the corporations are paid only one dollar a day, but they are provided with homes, garden, poultry and pigs, free medical attendance, education, amusements and the most up-to-date system of sanitation.

The boys of the employes are given vocational training, and the more likely ones are fitted to become foremen, supervisors and managers on the large sugar and pineapple plantations.

THEY'RE LEARNING TO DRINK—MILK.—The consumption of whole milk is rapidly increasing as a result of the educational campaign being conducted by the National Dairy Council, according to M. D. Munn, of Chicago, president of the organization.

The children are forming the milk drinking habit in the schools. Many times the quantity of milk is being served in hotels and restaurants as was the case a few years ago. Workingmen are consuming large quantities of milk in place of the beer and ale of pre-Volstead days. This is attested by the large number of milk bottles usually seen wherever a gang of men are at work.

WHO WILL BE SECRETARY?—Who is to be the next Secretary of Agriculture is still a matter of doubt. The appointment of Howard M. Gore, the present secretary, would meet the approval of the farm organizations and probably more farmers than any other man. But Mr. Gore is slated to take his place as governor of West Virginia on March fourth.

At a recent conference with correspondents, President Coolidge indicated that he was planning to appoint a man for the position who stands high as a marketing expert. In the past men have held secretaryship who have been strong on production, but weak on the marketing and distribution side of agriculture.—E. E. Reynolds.

Harrisburg Letter

HUSTLING THE PROGRAMS.—Legislative programs are fairly bumping into each other on Capitol Hill these days in their haste to get properly before the general assembly. To the assurance of a short session with a minimum of laws, there has come the added advantage of an early showing of cards. Things have moved so swiftly that even the state administration is not ready with all of its projects, the preparation of the budget having taken up so much time that the super power, prohibition and various departmental bills of which much has been heard are not complete. The state Grange legislative committee is meeting here this week to finish its program and various commissions are hurrying their projects to typewriters. The highway program is said to be ready and the educational program to be in black and white. Just where the agricultural program stands is a matter of interest. It is a subject for conjecture whether the aggregate of appropriations looking to agricultural objects will run so very much above those of 1923.

THREATEN INQUIRIES.—Poltical conditions such as have prevailed in Pennsylvania the last two years or so are always conducive to much talk in legislative halls, and as an outlet it is the idea to stage some inquiries into the way money was spent. In these it is probable the agricultural department will figure, particularly as to how proceeds of dog licenses were expended and whether the allocation of cash to fight the beetle, the borer and the bug was adequate or judiciously laid out.

THE FARMERS' WEEK.—This is the week of weeks in Harrisburg with the mid-winter Farm Products Show and thirty or more organizations holding meetings. Every year something is said about necessity of getting exhibits under one roof and providing meeting places where visits can be exchanged together with ideas. And then it is forgotten until the following autumn. The attendance at the meetings and exhibitions bids fair to be notable and there is some wonder why Harrisburg does not provide a few prizes or at least donate a hall.

LEGISLATORS TO CHOOSE.—According to remarks of men having to do with various studies of taxation for state purposes the last year or so the legislature is to be allowed to pick and choose its own course in regard to taxes. The Taxation Commission has a large amount of information prepared, some of which is aimed at inheritance taxes, but whether it will recommend any program is a matter of much guessing. From Capitol indications there will be an effort made to mantain the so-called "emergency" taxes. Income, manufacturing capital and other taxes will show up and draw fire.

MATCHING STATE ON ROADS.—Word has come from a dozen counties that they propose to match whatever the state allots out of the proceeds of the road bond issue for state aid propositions and from a dozen more that they will not contribute but want the state to do some building on main routes. However, the disposition in several of the large counties is to go dollar for dollar with what the state pays.—Hamilton, Harrisburg.

New Jersey Letter

FARM FEDERATION ELECTS.—The New Jersey Federation of County Boards of Agriculture, at its annual meeting in Trenton, N. J., January 13 and 14, elected H. B. Hancock, of Bridgeton, N. J., as president. Mr. Hancock succeeds H. E. Taylor, who has been president since the organization of the Farm Bureau six years ago and who was made honorary member of the Federation Executive Committee. As Overseer of the New Jersey State Grange and Master of the Cumberland County Pomona Grange, Mr. Hancock is well known thruout the state. The other officers for the year are: Vice President, D. J. Perrine, New Brunswick, N. J.; Treasurer, Dr. Frank App, Bridgeton, N. J.; Assistant Treasurer, Miss Claire E. Garretson, Belle Mead, N. J. The trustees are: Edward E. Logan, Mt. Holly, N. J.; Dr. W. H. Whiton, Neshanic, N. J., and Joseph Barton, Marlton, N. J.

BREED FLOCK CERTIFICATION.—The plan for certification of breeding flocks deveolped during the last year by the New Jersey State Bureau of Markets came up for intensive discussion at the annual meeting of the New Jersey Baby Chick Association in Trenton during Agricultural Week. The plan as developed by the state department provides for certifying for breed types, egg production and general health, the certification of hatchings producing certified chicks and in addition a plan of accrediting flocks free of bacillary white diarrhea. According to indications, this certification work should be put into operation so that its affect may be felt during the 1925 hatching season. Each applicant pays a nominal fee to cover the actual cost of the service.

NEW FOWL PLAGUE OUTBREAKS.—The poultry pathologists at the New Jersey Experiment Station recently reported fowl plague among flocks in several of the central and northern New Jersey counties, including Middlesex, Monmouth, Somerset, Hunterdon, Essex, Passaic and Bergen Counties. All of the outbreaks reported are immediately followed up by the Extension Department, which has worked out plans for prevention of the plague which are available at offices of the county agents and extension workers. The Morristown Poultry Show, scheduled for the second week in January, has been indefinitely postponed on account of the disease.

GATHERING RURAL SCHOOL FACTS.—The New Jersey State Teachers' Association recently appointed a rural school committee, the purpose of which will be to gather facts concerning a rural school situation in New Jersey for such use as may arise later in the consideration of general school [illegible] ment. The Farm Bureau is represented on the committee by Ralph Decker, Sussex County Superintendent of Schools, and Chairman of the State Federation School Committee.—B.

A Winter Scene in Chester County, Pennsylvania

Kellys' Certified and Guaranteed True-to-Name Trees are Well Known

We have sold a lot of trees in the last 45 years. They are owned by large fruit growers and by those who only grow fruit as a side line, or for their own use, or for exhibition purposes.

Almost every community has SOME Kelly Trees.

There is no better way to show you the type of True to Name Fruit Trees that we have been selling for the past 45 years than for you to see some of these trees growing. If you will write us, we will be glad to give you the names and addresses of those in your vicinity who own Kelly Trees. Call on them. See the trees. Talk with them about their trees and about their dealings with Kelly Bros.

65,000 Trees Certified With Seal

This year representatives of the Massachusetts Fruit Growers Association examined and certified True to Name 65,000 of our large stock of guaranteed fruit trees. These disinterested experts placed their lead seal bearing the true name of the fruit through one of the limbs. This "seal of approval" STAYS THERE until the tree bears True to Name fruit as guaranteed by us.

This certification of 65,000 trees does not make them any better than the other 200,000 Kelly guaranteed True to Name trees. It simply means that these 65,000 were examined and sealed while the rest were not examined by this particular group of experts. The quality is exactly the same, and the same ironclad Kelly triple guarantee goes with all trees, sealed or not sealed, the same as it has for the past 45 years.

All stock is packed in moist excelsior and straw—in boxes and bales lined with heavy paper to prevent the stock drying out.

We plant seedlings on UPLAND ground where there is good air drainage, and thus we are certain that the trees will be perfectly hardy, and absolutely free from injury of any kind.

Two Rules That We Always Follow

(a) We never substitute varieties.
(b) If we don't have what you order, we write and tell you so. Our customers always appreciate this.

Take The First Step Today—
Send For Our 1925 Catalog

This handsomely printed book pictures the entire line of Kelly Certified and guaranteed True to Name Fruit Trees, Berry Bushes, Shrubs and Ornamental Trees. All orders, large and small, are filled in rotation as received, so you will need the catalog at once to get your order in early. Send for it today.

"I make $150 every year with this Planet Jr."

"Yessir, Joe, I read a piece in a farm paper which made me sit up and think. I checked up on the store price of stuff I'm growing now right here at home and figured that I'm saving $150 every year."

Planet Jr. Garden Seeders and Wheel Hoes are making thousands of dollars for farmers every year who used to buy the food their farms now raise. Their first small cost is a fraction of what they pay in a single season, and they last for years and years. Look for Planet Jr. Tools at good hardware and implement dealers. Ask your dealer or write us for catalog.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser
Manager Pomona Gardens, Newark, Delaware

Cauliflower Didn't Head

Will you please tell me why my cauliflower did not head this last season? It grew fine till cold weather set in and not one headed in the patch.—J. W. B., Clearfield County, Pa.

Altho sometimes cauliflower does not head because the seed is poor, I think it is more likely in your case that your crop was simply a little later than usual. If you planted the seed and transplanted to the field at the customary time, there is still a chance that the crop would be too late. Either the dark weather in September or the drought that followed would have the effect of delaying the maturity of the crop. If your crops suffered for seven weeks from drought, as some of mine did last fall, you would have to expect a loss in the case of such a water loving plant as cauliflower.

The Same Thing Happened

In my own experience this fall only half of the cauliflower plants made heads before a severe freeze came. The others were thrifty and in two weeks more would have formed good heads. Since even with irrigation this could happen, it is not surprising that your plants behaved as mine.

I assume that you did not change your variety this year, getting one of the long season varieties like Autumn Giant. There is not much that can beat the Snowball or Dwarf Erfurt for fall planting, tho one might try other kinds for use in summer.

I can give you no rule for improving your luck with cauliflower next year. If the trouble was due to seasonal conditions this year, as I suspect, you can only repeat your successful methods of former years and hope for better weather in 1925.—W. C. Pelton.

Bunch or Pole Limas?

Will W. C. Pelton tell what kind of bunch lima beans he raises? He wrote some time in the past regarding the success of raising bunch limas. My trouble with bunch limas has been that they were so hard to shell that we bruised them more or less. Are the bunch varieties harder to shell? We, as a rule, raise the pole limas, but poles are hard to get.—H. F., Beaver County, Pa.

My experience with bush or bunch limas, as compared to pole varieties, is that all of the former are less certain to produce a full crop of beans, or even a satisfactory crop. They are for the most part shorter season varieties than the pole sorts, and more subject to injury by bad weather.

The most reliable of the bunch limas, as to sureness of bearing in all kinds of seasons, is the type known as Henderson Bush, known in the South as the butter bean type. These beans are the smallest of all, however, and unsalable on some markets, not only because they are small but because the beans turn white very quickly. The highest in quality, tho one of the least certain to bear in a bad season, is the Fordhook Bush, which is a thick bean that remains green for a long time. The Burpee Improved Bush is a large flat bean of the King of the Garden style, tho it is dwarf.

I usually plant most largely of the Fordhook, because of its quality, with a smaller planting of a variety like Burpee Improved, and a still smaller planting, made just to be sure of a few beans for home use, of Henderson Bush.

There is little difference, so far as I have observed, in pole and bush limas as to ease of shelling. All of them shell more easily when they are nearly ripe, so that it is good policy to choose a variety that retains its green color as long as possible. In this regard Fordhook has two good qualities. It retains its quality as to color and tenderness for a long time, and also its state of ripeness is easy to determine when one is picking the beans, because the pods are very thick. The flat seeded sorts sometimes reach full size before one can easily detect the fact, because the pods are so wide that their thickness is less conspicuous than the Fordhook.—W. C. Pelton.

Wants Some Advice

I have read that a professor of botany of one of our largest universities has been appointed to take charge of extensive research work. It seems that this vegetable growing business still remains a question of application and research!

Two acres of my little farm have not been cropped for fifteen years. I now desire to grow vegetables. When I started here I prepared six acres for cow peas, crimson clover, rye and vetch, later plowing under a fair stand of each, then planted potatoes to better prepare soil for seeding a special mixture of permanent pasture grass. This sod was plowed under in 1923 and after liming the two acres were again seeded to alsike clover. Last spring I divided the lot into eight sections and installed overhead irrigation and grew one crop on each plot. In September two acres were seeded to winter vetch and crimson clover, after inoculating seed and applying one ton of lime. During December two sections received an application of eight tons of well mixed poultry litter. One section grew toma toes and the other beans la season. Will try early lettu here this spring. On the oth six sections the vetch and clov will be allowed to reach b growth for green manure and I will try to grow a crop of bean radishes or the like to be remov ed in time for fall lettuce. Pre ceding planting I have in mi applying 1000 to 2000 poun of 4-8-10 or possibly 3-2. M desire is to operate this lit garden in connection with pou try and grow from year to y lettuce, carrots, beets, parsl spinach, radishes and the lik the capacity of the soil witho impoverishment and witho sacrifice of quantity or quali of the product. Any informa or advice will be gratefully a cepted.—C. A. R., Cumberla County, N. J.

It need not surprise you that are still many unsolved prob which the universities are tryi solve. Even those concerned feeding the soil are far from as most of the big vegetable ers will tell you. If you hav read Peter Henderson's book on dening, written by an exper dener of a past generation, an ticed how easily he said, "S fifty tons per acre of good ma as a preparation for nearly crop, and then have looked u present price of city manure, yo agree with me that every gene has new difficulties to solve.

As to your two acres, your advisers on all points are your c ty agent, your more successful ne bors, and the extension vegeta

an from New Brunswick. My own uggestions would run like this:

As the area is only two acres, it eems to me you should not grow more than two cash crops at one ime, lest you may not have enough f each one to market successfully. nless you use other manure than hat from your poultry houses, I ardly think you can manage year fter year without getting in freuent green manure crops like clov r, vetch, and rye, even tho you have rrigation and are willing to use lenty of commercial fertilizer.

In spring you could use oats and eas, plowing by June 1; in summer ow peas or soy beans; in fall tim thy, crimson clover, vetch, wheat or ye. If you can get a big growth of ow peas or soy beans between June 0 and August 20, you could get wo cash crops a year from all the and. With stable or yard manure available, you could be sure of three crops, altho the midsummer crop ay not be profitable.

Lettuce and spinach, or lettuce lone, over the whole two acres, are erhaps your best crops for the coming spring. Unless you set out fall celery on a part of the ground, you could get a crop of beans during the summer, but I doubt whether beans would pay as a regular crop under irrigation.

Pay Best Under Irrigation

After this year the summer months might be used for a crop of cow peas or soy beans to be turned under before crops of lettuce, spinach, kale, or winter onions. The so-called salad crops, which include celery as well as those here named, together with spinach, are most likely to pay under irrigation.

If after the second year you find that lettuce and spinach have appeared too often in your rotation, or have not been profitable, you could try strawberries on the entire two acres. When these have borne one crop, or at most two, you could plow them in June, plant cow peas or soy beans, and in fall return to lettuce and spinach, or other similar crops that seem likely to pay better.

If the poultry manure contains much straw, it could not wisely be used as a top dressing for cash crops. It is a good plan to spread it on a winter cover crop to be plowed in spring, altho I think rye or wheat would be more likely to make full use of it than would vetch or clover. If you grow only a summer cover crop like cow peas or soy beans, the poultry manure may have to be plowed under, unless it is unusually free from long straw.

Cut Down on Potash

Since you have plenty of poultry manure, you can cut down the potash in your fertilizer to five per cent. It is a good plan to use acid phosphate with the poultry manure, or maybe raw rock, say 100 pounds to the ton of manure. With eight tons of poultry manure and a thousand pounds of 4-8-10 fertilizer on a half acre, you may get too high a proportion of nitrogen in your treatment. The use of phosphorus in the poultry manure will help to remedy this condition. It is a question of balance between the parts of the fertilizer, and not the total amount used. In Florida, where celery is grown with underground irrigation, as much as four tons of fertilizer are used safely and profitably.

I have been figuring that you wish to do a wholesale business, not a retail business. If it is retail, you should have a wide variety of crops to sell. Otherwise, stick to one or two crops, choose those that are best adapted to the labor situation on your place, and those most likely to pay well under irrigation. These are usually the salad crops, together with spinach and strawberries, and not beans, corn, or tomatoes.—W. C. Pelton.

As Even as Rainfall!

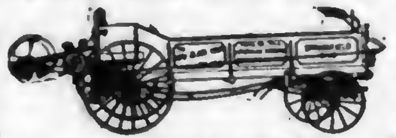
SUPERIOR Seeding Means *Even Seeding* ~*and Uniform Depth*

THE Superior Grain Drill plays no favorites. ***Every seed gets an even start.*** Properly spaced to the fraction of an inch—in roomy trenches uniformly covered—all seeds sown by the Superior grain Drill have their full chance for proper germination and sturdy growth. No bunching, no skipping. No idle soil to cut your profits. ***Superior seeding is as even as rainfall.***

Superior Grain Drills

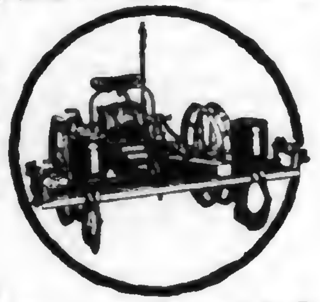
have been the world's standard for more than a half-century. ***Superior quality is as staple as wheat itself.*** And here is the reason: While these dependable drills are, above all else, precision tools, primarily designed for remarkable planting accuracy, they are so thoroughly well built that they outwear practically all other farm implements. No other farm tool does more to insure farm profits—or costs so little through the year as a Superior Grain Drill—or a Superior Seeding Machine for any planting need.

Black Hawk Manure Spreader



A Manure Spreader of Superior quality. Scientifically designed and sturdily built. Has a strong and positive feed, does not choke and is free from cog gearing. ***Get the full fertilizing value of the manure by using the New Black Hawk 40A.*** It thoroughly pulverizes and spreads manure widely and evenly in a great range of quantities. Lightest draft, simplest construction, easiest to operate. A Two-horse Spreader. Does a perfect job on hillsides and level ground. Write for full details.

Superior Corn Planter



Like all Superior machines this Corn Planter is thoroughly well built, extremely simple and exceptionally accurate. ***No feed rod clutches to get out of order.*** Either flat drop or edge drop plates can be used without changing hoppers—and as plates are moving steadily at all times almost perfect filling of cells is assured.

Row adjustment 28 to 48 inches—two inch spacings. Double marker. Instantly adjusted for drilling. Special plates can be furnished for planting Beans, Peas, Peanuts, Kaffir Corn, Beet Seed, etc. Write—or check coupon.

Get the whole story of Superior quality. Check on the coupon the implements you are interested in—or write for circular and valuable booklet "Drilling for Gold."

More Money from Your Crops

You can do it with seeds that have vitality and life—that are of high germination and adapted to the soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story; added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

46 Years of Better Seeds

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops.

We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.

This Valuable Book—FREE

The 1925 Isbell's Seed Annual tells how to select seeds how to prepare soil, gives cultural directions, and quotes direct-from-grower prices. The coupon brings it Free.

Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Adopt Recommendations Concerning Deer Problem

THE following recommendations concerning the deer problem were adopted at a well attended joint meeting of the interests most concerned, held on January 5, at Harrisburg. These recommendations, if approved by the State Board of Game Commissioners, and enacted into law, offer partial improvement only, not permanent correction. They do not recognize the fundamental principle of state responsibility for damages caused by the state's livestock, with the consequent obligation of the state to either prevent the damages or pay for them.

These recommendations throw the burden of improving conditions on the farmer; it should be assumed by the state. However, they represent a distinct advance, and an awakening of the sportsmen to the fact that we do have a real problem, which they have been unwilling to admit heretofore. It is a step forward, not a final solution, and as such should receive the support of all agricultural interests.

Steps in Advance

RESOLVED, That as a protection to farming districts against injury caused by deer, we recommend the introduction and passage by the Legislature of an amendment to the present game law authorizing the game department in counties, where in their judgment the same is necessary, to declare an open season on doe; that the special license for killing doe in such season be fixed at one dollar and that the length of such open season be determined by the game commission with proviso that farmers and tenants hunting on lands owned or occupied by them be granted such license on application without charge.

RESOLVED, That the present law be amended by permitting the owner or tenant of a cultivated farm and his regular employes to kill deer and bear found committing injury to farm lands or crops or where injury has recently been committed and to keep the carcass upon making report thereof to the game department.

RESOLVED, That the present game law be so amended as to permit the game department to curtail the open season and bag limits on any species of game or to extend the open season generally or in districts under such regulation as they may deem necessary.—S. W. Fletcher.

Dwarf Apple Trees

DWARF apples have no place in commercial orchards altho the advantages claimed for them are such as will appeal to the amateur grower with a small garden space. Due to the fact that the dwarf trees take less space, a greater variety of fruit can be grown in the garden or small orchard than where standard-sized trees are grown. Dwarf apples also make attractive ornamentals, if properly cared for, and thus add to their usefulness for home planting. For commercial orchards, however, dwarf trees lack hardiness, are subject to winter-killing, are easily uprooted by wind, tend to produce suckers in abundance, and are no more productive than the standard kinds which do not possess these undesirable traits, it is said.

How Dwarfs Are Produced

Dwarf trees are trees which by various means have been made to grow smaller than normal trees of the same variety. The dwarf trees are just as healthy and vigorous as normal trees and produce fruit of the same size and quality.

In America, dwarfing is usually accomplished by grafting cions or cuttings from standard varieties on some root-stock which dwarfs the top. It is usually necessary to resort to summer pruning as well to secure true dwarfs. Dwarf apples come into bearing slightly earlier than do standard apples, but the difference in this respect is not sufficient to make the dwarf trees any more desirable commercially.—Geneva Agricultural Experiment Station Circular.

Mistakes of the Past

YOUNG apple and peach trees in the past have been pruned too severely and bearing trees have been pruned too lightly or too infrequently, according to Paul Thayer, specialist in pomology extension of the Pennsylvania State College. Changes have taken place very rapidly in theories, methods, and schools of pruning, but current recommendations are based upon careful experimental evidence.

Every orchard grower wishes to secure three things in his young orchard at the earliest date possible, strength, growth and productiveness. Pruning, especially heading back, interferes with fruit bearing, but after fruit trees are mature and fruit bearing established the trees should receive a careful and increasingly thoro annual pruning.—A. L. Beam.

Time to Prune Grapes

PRUNING of young grape vines should be done during February or early March while the vines are still entirely dormant, says J. H. Clark, of the New Jersey Agricultural Experiment Station.

When pruning the average one-year-old vine, all but the one most vigorous cane should be removed. This one cane is then cut back to two buds. At this time or soon afterwards a heavy stake five to six feet high should be driven beside each plant. The canes are tied to this stake as a support during the summer.

Leave Only One Cane

By pruning time the second year, one of the canes should be long enough so that it can be pruned off near the top of the stake. All other canes should be removed. During the following summer this trunk will produce several side canes. Usually four of these are left at the pruning given after the third growing season, each being cut back to four or five buds.

At this time, the vines are ready for training on a trellis. The Kniffen trellis is the best for eastern grapes. It consists of two wires, one at a height of about three feet from the ground, the other about two feet from the first and directly above it. One of the canes is tied in each direction on each wire.

"What are your qualifications for the post of night watchman?" the manager asked.

"Well, sir, for one thing," replied the applicant, confidentially, "the least noise wakes me up."—Philadelphia Inquirer.

Two New Varieties

TWO new varieties of oats, Keystone and Patterson, have been developed by C. F. Noll, experimental agronomist of the Pennsylvania State College. Both varieties originated from individual heads selected in 1910 from a variety known as Japan. They have been known heretofore by their pedigree numbers 53-11 and 66-11 and have been named only recently. Keystone was named after the state in which it originated and Patterson was named in honor of the late William Patterson, for many years superintendent of the college farms.

Altho Keystone is approximately two days earlier in ripening than Paterson, the two varieties are almost alike in height, type of grain and in yielding capacity. They are both rather early varieties averaging respectively, at the Experiment Station, five and seven days days later than Sixty Day and six and four days earlier than Victory. They are also about five and three days earlier than Bumper oats.

Where They Grow Best

These new varieties of oats are best adapted to those sections of Pennsylvania in which early oats do best and they have there proved much superior to Sixty Day or Kherson, the most commonly grown early varieties. The grains are yellow and small with a thin hull which gives a higher percentage of kernel in the grain than is usually found in the larger grained varieties.

Keystone and Patterson have been among the highest yielders in tests conducted thruout the state. At the Experiment Station in the last ten years they have averaged nearly ten bushels more per acre than Sixty Day. Farmers in Pennsylvania have grown these varieties for some years, and the area grown in 1924 has been estimated by Mr. Noll to be at least 1100 acres so that a large amount of seed should be available for those desiring to try these new varieties.—A. L. Beam.

To Grade Jersey Potatoes

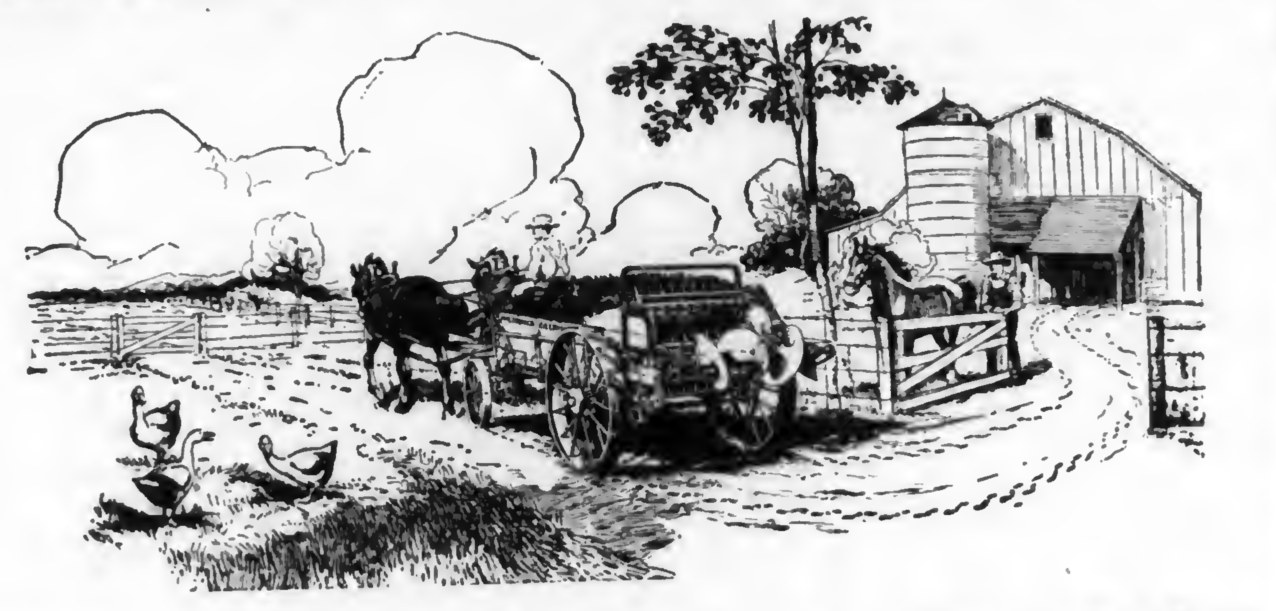
THE central New Jersey potato crop of 1925 will be distributed to the great eastern markets under far more favorable conditions than heretofore if plans of the leading potato dealers bring expected results. Realizing that every effort must be made to improve the reputation of the Jersey potato and market it efficiently, the distributors of Monmouth, Middlesex and Mercer Counties have been conferring on the problem. This is another step in the improvement of the potato situation, looking towards the establishment of a standard grade of potatoes from New Jersey.

While the dealers realize that all the potatoes produced must find a market even tho they are not of high quality, the distributors are planning to establish a reputation for the standard grade that will meet all market requirements and compete on a favorable basis with the best potatoes from all other sections.

Uniform Grade Is Essential

At recent meetings of the dealers of the three counties the belief was expressed that the hope of New Jersey potato producers lay in the establishment of a uniform grade, based on size and quality. A system of inspection at every loading station, using federal standards, is being considered as a check upon the whole operation.

The State Potato Improvement Committee, representing the State College, the State Department of Agriculture and the Federation of County Boards, is co-operating in the efforts of progressive growers and dealers to improve the standing of this famous Jersey product that it may be a profitable crop for the state's farms.



"GOOD EQUIPMENT MAKES A GOOD FARMER BETTER"

Put Richness Back in the Soil!

ALL men who have made good money at farming have been very careful to keep their soil fertile and rich. There are poor years and good years in farming but the man who puts manure on his fields in the right way will reap real profits.

The McCormick-Deering Manure Spreader is one of the most valuable machines on the farm. It increases yields, pays for itself in a hurry and goes on building bank accounts.

It spreads smoothly and evenly, putting on just as light or as heavy a coat as you want. The pitchfork method of spreading cannot equal the yields that follow the McCormick-Deering. That has been proved many times. Besides hand spreading is hard work; the McCormick-Deering saves many hours of time and much hard labor. Its good strong beaters tear the manure rapidly and spread it well beyond the wheels.

INTERNATIONAL HARVESTER COMPANY

GLASS CLOTH

Build a Scratch Shed with Glass Cloth Roof right onto your poultry house.

Greatest Discovery Ever Made for Poultrymen and Gardeners

Ideal for scratch sheds, poultry houses, brooder houses, hot beds, cold frames, greenhouses, storm windows, doors, etc.

Exactly what every poultry raiser and gardener needs—in fact, every family will find Glass-Cloth handy to have around the house. Enclose porches for winter, repair temporarily broken window panes, etc. Keeps out cold, rain and wind—admits sunshine and warmth efficiently as glass, and retains warmth longer.

A Glass-Cloth hot bed matures vegetables weeks before regular season—just at the time when prices are at the peak.

Baby Chicks Grow Faster —Hens Lay All Winter

A Glass-Cloth covered scratch shed gives chickens balmy June weather conditions indoors, during zero months. Hens lay more eggs. "Paid its cost ten times over," writes Iowa farmer, "by giving extra light and warmth for young chicks and laying hens. Greatest thing I ever heard of. Better than glass and cheaper, too."

Fine For Young Chicks

They grow faster, healthier and feather out into plump frying size several weeks earlier. Protected from storms, spring rains, dampness, etc. No cold drafts or outdoor chill.

Kirby Poultry Farm

General Purpose Breeds

I have about fifty mixed hens. I would like to have some advice on what kind of hens to get which will pay for themselves in eggs and that will also be a good breed for market.—R. P., Jefferson County, Pa.

You will find in many different farming sections that the most popular poultry breeds for both egg and meat production are the White Wyandottes, Rhode Island Reds and Barred Plymouth Rocks. All of the different colored Rocks and Wyandottes are similar in meat type and give good satisfaction. Remember that the individuals in the breed deserve much consideration.

To obtain many eggs from a heavy breed you must select birds of laying type and cull out the slackers. I find some meat dealers like Brahmas and Orpingtons the best of all meat breeds because they produce so many plump heavy hens.

The Jersey Black Giants are also popular. But the Rocks, Reds and Wyandottes will probably continue to be the most popular general-purpose fowls for the farm flock.—R. G. Kirby.

Coal Burning Brooders

I have a brooder house seven by twelve feet with three windows on the south side. Would a coal burning brooder for 500 chicks heat the building too much on a mild day? Is the house so small that the chicks could not back away from it far enough or can the coal burning brooders be regulated so that they don't give much heat if not wanted? I have had no experience with coal brooders, so please give me all the information you can.—C. W. C., Caroline County, Md.

I would place the coal burning brooder stove at one end of the house about two or three feet from the wall. Then the chicks can run to the other end and toward the windows where the air will be cooler. On mild days it is necessary to watch your coal burning stoves carefully and it may be necessary to open the windows to keep the house from becoming too hot.

The coal burning stoves have thermostats that help in regulating the temperature to a certain extent. But on warm days it is often difficult to hold the temperature down without putting out the fire. If the chicks can get away from the heat at intervals, the fact that the stove is very warm causes no trouble.

I use coal burning brooder stoves in eight by ten houses and place the stove toward the back on one side of the house. However, I never place more than 200 to 300 chicks with each stove. Overcrowding has a tendency to devitalize the chicks and increase the mortality rate.—R. G. Kirby.

Poultry Hints

Most of the egg-eating troubles are caused by poorly made nests. Open nests are often used as scratching places by the hens and eggs in the nests are kicked against the sides and broken. Soon the hens learn to eat these broken eggs. If the nests are open and light it may lead to quarrels on the nest and this causes broken eggs. Have the nests darkened with a track where the hens enter them from the rear. R move the eggs by dropping a hing door in the front. Hens in such nes are not disturbed by other birds the flock and the eggs are scarce seen even by the birds that lay the And the other hens will not roo on the nests or scratch in the nes ing litter.

* * *

If fences or colony houses a needed for the poultry business th year it does not look like economy postpone the purchase for anoth year. The profits that may be l are apt to be larger than any mon we can expect to save by reducti in the prices of materials. The pou try business requires much raw m terial in the way of fences, gener hardware and lumber and the e and poultry meat cannot be turn out without the equipment.—R.G.

A Paying Flock

MANY persons say chickens do pay. My chickens have a ways paid. The following figures my last flock, which I started la May, are authentic and proof of m statement.

Cockerels and eggs sold.....$86.
Hatching eggs and feed to date 79.

Profit .... $6.

This is by no means the wh story. In addition to this small pr it I have sixty-five pullets and fo roosters. At $1.50 apiece, which is low estimate of their value beca I intend them for breeders, my pr its are increased to $103.50. Th breed is a celebrated White Legho stock which I would not sell und $5.00 apiece.

I built a hen house, which twenty by sixteen feet, unaided. used remnants which were lyi about from the razing of an old h house and the old pig stable. I co sider the cost of this lumber not ing, since anybody buying it woul not have offered more than a son

I put down a tight new floor. Th cost $17.44. I covered the hou with asbestos roofing material whic cost $7.50. The whole cost is $24.9 I did all the work during spare ti and reckon it at nothing. I belie Pennsylvania Farmer people are gl I was busy, otherwise I might hav flooded them with many medioc ideas.

In eight months' time I own hen house, worth at least $100, an sixty-nine head of poultry and the is $6.26 profit in my purse.—R.T.W.

Eggs and More Eggs'

IREN S. LIGHT, of Sand Hill, Le anon County, Pa., has ninet eight six-month-old White Legho pullets that laid 841 eggs during t last fifteen days of November. Duri the first fifteen days of Decemb they did much better, as high eighty eggs were found in a da These eggs brought seventy cents dozen and more orders than filled were received by Mr. Ligh This is the year's record so far known.—R. I. W.

Four Barred Rock pullets and o cockerel were recently presented the poultry department of the Pen sylvania State College by C. W. Me ers, Hanover, York County. Meye is known as one of the foremo breeders of exhibition Barred Roc in the United States.—B.

CARE FOR THE FLOCK

Prevent That Damp Condition in the Poultry House

DURING the winter there is much complaint because poultry houses become damp. This condition can often be prevented by studying the causes.

Some poultry houses of fine appearance have too much glass. During the day they become very warm. At night they cool off rapidly. The moisture condenses on the walls and ceiling and drops into the litter and soon the house is damp and the birds may have colds.

A good general rule with open front poultry houses is to use a square foot of glass to each sixteen square feet of floor space. Then have twice as much open front space as the area covered with glass. The open front can be covered with fine mesh hardware cloth and drop curtains can be used during severe storms. Even lowering the curtains may make a house damp in one night.

Curtaining the Windows

The curtains can be made of some porous sacking which will not clog with dust and prevent all air from passing thru. I find that the coarse sacking used for meat scrap and oyster shell can be pieced out and makes a good covering for open front poultry houses. Even then I do not lower the curtains except when a severe storm from the southwest may sift a lot of snow into the litter. A mild snow storm may cause a little snow to sift into the litter in front of the house but this seems to do no harm if the house is otherwise dry and plenty of sunshine can enter.

Usually it is best to allow about four square feet of floor space per bird for the heavy breeds. Leghorns in a well managed house may get along with three square feet per bird. When the house is overcrowded the straw litter receives more manure than it can absorb readily. The moisture in the manure helps to make the house damp. The hens also throw off considerable moisture in breathing and the greater the number of birds the more moisture in the air. It is very difficult to keep the air in an overcrowded poultry house free from excessive moisture.

Keep the House Clean

Some poultry houses may be damp because great heaps of manure are allowed to remain on the dropping boards or in a pit under the roosts. During freezing weather the dampness from this is not noticed but the first thaw gives the moisture and fumes in the manure a chance to pass into the air.

If you weigh or carry a bushel of fresh moist manure and then a bushel of dry manure you will note the great difference in weight. That represents the moisture carried in the manure which must be promptly removed from a poultry house to keep down the dampness.

Don't Waste Sunshine

Some poultry houses are lacking in both open front and glass. One or two small openings permit a small amount of sunshine to filter thru for a couple hours each day. This is not enough to keep the litter dry. Poultrymen should not waste sunshine as it costs nothing and is a great help in keeping a poultry house clean and stimulating winter egg production.

There are times when good poultry houses may show a little dampness, such as during a period of high temperatures and thawing immediately after zero weather, but if the house is properly built to permit fresh air and sunshine to enter, and it is not overcrowded, it soon dries out without causing soggy litter and unhealthy conditions for the flock.—R. G. Kirby.

CHILD—*"Can baby chicks eat anything, mother?"*
HER MOTHER—*"Some of them have to, poor things!"*

They're Babies

You don't give the baby beefsteak—be careful of baby chicks' food, too. Wrong feeding causes more deaths than all the *diseases* baby chicks ever had. Try the scientifically prepared food made by Pratts. There is nothing like it in anything but name. It's the *original* buttermilk baby chick food.

Watch what happens when you put the chicks on *Pratts*. You'll see stronger, more vigorous chicks from the first week. In twenty days they'll be so healthy you will realize what selected, special-milled, mechanically *predigested* food does for baby chicks! DIAMOND PICK
MEAT and BONE SCRAP

45% to 50% protein—ample bone phosphate of lime, practically no fibre—sweet, clean, fresh

Meat and bone make the best animal food for poultry but various brands differ greatly in quality. Protein content alone does not determine value—the quality of raw materials used and care in making are equally important.

Diamond Pick, the best meat and bone scrap, is made in our modern, sanitary factory under constant, rigid inspection. Contains only selected meat and bone, fresh, sweet, clean. No dead or tainted stock, no hotel garbage, no fish, no tankage or filler, no glass, iron or foreign substances. Thoroughly cooked in our patented roasters, pressed to remove grease, ground to a fine meal for easy mixing with the mash. An appetizing, safe, wholesome feed.

This product is the best animal food for poultry. Make us prove it! Get the genuine Diamond Pick meat and bone scraps from your dealer or

The baby beef feeder got his watch

Letter from Ohio's Boy Champion Baby Beef Feeder for 1924

DR. HESS & CLARK, Inc. Dec. 9, 1924.
Ashland, Ohio.

Gentlemen:

In the fall of 1922 I decided to enter the boys' and girls' Baby Beef Club.

These beeves were put out by the Montgomery County Fair board, among boys and girls of Montgomery County.

These beeves were fed by boys and girls and exhibited at Montgomery County Fair. I met with defeat, as I obtained ninth prize.

Last fall I decided to raise another one. So on November 17th I received my Aberdeen Angus beef to be raised for the Fair of 1924.

The first month he gained only five pounds and did not eat well. At the beginning of second month I began to feed Dr. Hess Stock Tonic, along with his daily rations. At the end of second month he gained sixty-five pounds.

As I saw it was a great help in making him gain more, I continued feeding the Stock Tonic.

On 1st of September I exhibited my Baby Beef at Montgomery County Fair. On September 2nd the thirty-one beeves were judged—I obtained first prize in county and first in State of Ohio.

It made a gain of 525 lbs. in 290 days.

The prizes I received were trip to Columbus, trip to Chicago and gold watch, given by American Angus Association.

I feel as though it was through the feeding of your Stock Tonic that I obtained first prize. I wanted you to know this, as my experience may be of great benefit to other stock raisers.

Yours very truly,
LORNE B. GILBERT,
Germantown, Ohio, R. F. D. No. 1.

Your Tractor Will Pull a Papec

ANY small gas engine, developing 4 h. p. or better, will pull an R-10 Papec. A Fordson or other light tractor will keep an N-13 or L-16 comfortably busy. If you have a heavy tractor, and a big crew, the K-19 Papec will handle all the corn you can bring to it.

Papec sales are steadily increasing. This calls for tremendous output and our especially equipped factory is kept busy 12 months a year—making nothing but cutters. It is the world's largest exclusive cutter factory. It gives you real quality at rock bottom prices. Your dollars buy more in a Papec.

Head of the Department of Dairy Husbandry, Pennsylvania State College

Cow Gives Bitter Cream

Can you tell me how to treat a cow that has bitter cream? She developed this last fall while out on pasture that had been heavily fertilized with ground bone. I thought perhaps she had gotten something into her system from this and would lose it when she went into the stable, but the trouble is getting worse. She was fresh last July but has not been bred since. I am feeding her mixed hay, a commercial grain mixture and roots.—W.

If the bitterness is present in the milk from this cow soon after it has been drawn, then the trouble is with the cow. On the other hand, if the bitterness is not noticeable for twenty-four hours or more after milking, then the trouble is likely to be due to bacteria. In the latter case, the only thing to do is to boil thoroly all the milk utensils for at least twenty minutes daily on three successive days.

If the bitter flavor is noticeable soon after the milk has been drawn, it will be necessary to give special attention to the cow. It should be said that the trouble is not likely to be due to the ground bone which you put on your pasture. An abnormal condition of this sort is usually limited to animals that have been in milk for several months, and also when they are advanced in pregnancy. It does not often occur when the cow is receiving plenty of green feed.

The Cause of the Trouble

The trouble, when it is found in the cow, is caused by an enzyme known as lipase which is secreted in the milk and causes a decomposition of fat resulting in the rancid odor. Milk in this condition is not unwholesome for use, but it is so objectionable in odor and taste that no one cares to use it.

Frequently the cow producing milk which develops this bad taste is over-fed with concentrated feeds. Reducing the grain ration somewhat and giving two or three doses of epsom salts at intervals of two or three days may assist in removing the cause. The development of this bitter condition in the milk may be prevented by heating the milk to the boiling point immediately after milking, and then cooling it as rapidly as possible.—A. A. Borland.

Shall We Change?

We are feeding our milk cows cottonseed meal two parts and bran one part, with timothy hay and silage as roughage. They seem to be doing well. We have little corn. Would it be more economical to buy corn at $1.40 per bushel and make a balanced ration or feed the cottonseed meal and bran? Cottonseed meal is $55.00 per ton, 43% protein. Bran is $40.00 per ton.—P. A. N., Franklin County, Pa.

I am very much interested in your experience in feeding so large an amount of cottonseed meal. A great many farmers are fearful of bad results when feeding as much as four pounds of cottonseed meal daily to milk cows. It is interesting to note that you have had no bad results from this practice. Your experience, however, is in accord with that of some of the southern experiment stations which have fed as much as four pounds of cottonseed meal mixed with other grains, for ed periods of time without any results.

To Add Variety of Proteins

I do think it would improve grain mixture if you were to linseed meal in place of part of cottonseed meal. This will giv greater variety of proteins in grain mixture and will make a mixture somewhat more palat and laxative than your present without increasing the cost to great extent, and without chan materially the analysis of the ture.

If you were to modify the so that it would consist of one one-half parts of cottonseed one-half part of linseed meal, one part of bran, I should e better results than you are now ting. A mixture of one part cot seed meal, one part linseed meal one part bran would be still b if it is not too laxative.

Not More Economical

It would not be more econom to buy corn at $1.40 per bushel mix with your present ration. $1.40 per bushel, corn would you $2.50 per hundred pounds when you add fifteen cents for ing it runs the cost up to $2.65 hundred pounds. For this $2.65 get only 7.1 pounds of digest protein, and 81.7 pounds of total gestible nutrients. Cottonseed costs you only ten cents per more than the corn and you thirty-seven pounds of digest protein and 78.2 pounds of total gestible nutrients.

When it comes to a balanced tion, if your cows are receiving othy hay and corn silage for age they get a ration which is nearly balanced with your pre grain mixture than if you were use corn in the place of the cott seed meal.—A. A. Borland.

Appearance and Produ

A NUMBER of agricultural leges and breeders of dairy tle are now co-operating with Bureau of Dairying of the Un States Department of Agriculture the study of the relationship of outward appearance of dairy cows the size of internal organs and milk and butterfat production. Pennsylvania State College, Uni sity of California, and Cornell U versity already have contribu records which they have made cows discarded from their herds.

So far between thirty and cows of known records have slaughtered and measured after outside measurements had be made. Some famous producers ar the list, including the long-time ducing champion Jersey cow, So 19th of Hood Farm, which was sented to the Department. mounted skeleton of this famous is kept by the Bureau of D scientific study. Measurements been taken of the United St champion butterfat cow, the stein-Friesian, May Walker Homestead, with a record of pounds of fat in a year. Permis had been granted the Depa secure both ante-mortem and mortem data on the Holstein, Alcartra, one-time world-record producer, but the unfortunate pearance of foot-and-mouth dis in the herd made it impossible to use her in this way.

At the time of the last National Dairy Show preliminary measurements were made of some of the best producers exhibited. Several owners of high-producing cows measured at this time volunteered permission to the Department to follow thru its investigations when these animals are ready to be retired from the herd. The Department is glad to accept such offers of co-operation from owners of outstanding animals. Where state colleges are co-operating they will make the measurements for all cows offered by breeders in the state, as well as those in their own herds.

New World Leader

AFTER breaking the world's record for the production of butterfat in ten months as a junior three-year-old a little over a year ago, Lyons Sarcastic Korndyke, a purebred Holstein-Friesian cow, recently completed a ten months' test period with a butterfat record which makes her the world's leading junior four-year-old over all breeds. Her 305-day record as announced by the advanced registry department of the Holstein-Friesian Association of America is 24,062.3 pounds milk and 854.88 pounds butterfat (1068.6 pounds butter), for which she qualified by giving birth to a bull calf, weighing 130 pounds, carried for 200 days of the test period.

Her Dam Also a Champion

The new champion made her record on the farm of Abner S. Deysher, near Reading, Pennsylvania, where she enjoys the companionship of several other of Pennsylvania's leading producers, including her dam, Charlotte Lyons Korndyke, who holds the highest butter record ever made in ten consecutive months by mature Holstein cows in the Keystone state.

Lyons Sarcastic Korndyke received thruout her test a ration consisting of home-mixed grains, including oil meal, cocoanut meal, molasses and beet pulp. With the grain ration she received considerable quantities of good corn silage and alfalfa hay. She was kept in comfortable, light and roomy quarters, had constant access to fresh water and was given exercise out-of-doors every day.

Records Saved Lives

A HEIFER dropped by Molly, a grade cow, was being raised in the herd of John Palmer and Son, Bradford County, but when two purebreds dropped female calves, it was decided that Molly's calf should be vealed. However, since Molly was enrolled in the Laurel Hill Cow Testing Association, vealing of the calf was delayed until Molly's yearly record was completed. In the meantime the calf was growing into a promising yearling.

When C. J. Griggs, tester, figured up Molly's record for the year, he found she had produced over 10,000 pounds of milk and 464 pounds of butterfat. Now, there is no doubt about the fate of Molly's heifer calves, so one yearling and her young sister can thank the cow testing association for their lives.—A.L.Beam.

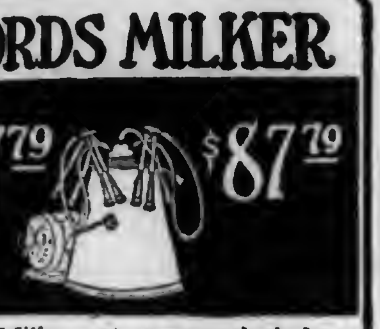
National Champion

OWL INTEREST SUPERB 477076, a young Jersey cow, owned bred and tested at Sibley Farms, Spencer, Mass., has completed a second official record which singles her out as one of the outstanding dairy animals of the day. Starting this test at the age of three years and eleven months she yielded 695.63 pounds of fat and 12,582 pounds of milk in 305 days. She calved within fourteen months and thus qualified for a gold and a silver medal and for the Massachusetts and National Jersey Championship in Class AAA.

COMPLETE ELECTRIC OR STANDARD EQUIPMENT $87.79

FORDS MILKER

$87.79 $87.79



Fords Milker—at new amazingly low price, $87.79, highest quality guaranteed—is an opportunity whether you own two cows or fifty. Simple and trouble proof. Built with every latest improvement, the result of 14 years' experience—and absolutely guaranteed!

GUARANTEED

It is a single or double unit machine. Works as fast as two men—at a fraction of the cost. Does not irritate cows. Operates exactly like hand milking, a complete vacuum release with each pulsation. No puzzling mechanism—only two detachable parts to teat cups, three to valve chamber. Rubber valve trap assures airtight, dirtproof valve chamber. Your choice of electric milker (1/6 h. p. motor with electric) or standard equipment. Standard equipment will handle ten cows in single row. More shafting or rows at slight additional cost. Guarantee protects you. Should last twenty years.

Why We Sell at This Low Price, $87.79

Fords Milker saves you many dollars. You'd like to know how quality and performance are kept 100% and price almost slashed in two. Remember, guarantee with every machine. Get the facts. See your dealer or fill out the coupon—NOW. It costs nothing to learn the details of how 14 years' experience will save you time, labor and money.

When the Price of Milk is Low

the only way to make a profit is to produce milk cheaper.

How are *you* going to do it?

Poor feed or no feed at all will not lower the *cost of producing* milk. It *will lower* the *amount* of milk produced from the same number of cows. You'll still be paying the cost of keeping and feeding each and every cow, and just get less in milk money. Is *that* profitable?

If you don't want to produce more milk, cut the number of cows you're maintaining, and make each one produce the most she can for the *least* in feed money. Feed Ti-o-ga Dairy Feeds as directed to the size herd you want and you'll get milk produced at lowest cost—and a profit.

Red Brand Ti-o-ga Dairy Feed to be fed with low protein succulent roughage; Silage, Pasturage, Green Fodder, etc.

White Brand Ti-o-ga Dairy Feed to be fed with medium protein dry roughage; Timothy Hay, Mixed Hay, Corn Fodder, etc.

Blue Brand Ti-o-ga Dairy Feed to be fed with high protein dry roughage; Clover Hay, Alfalfa Hay, etc.

If your dealer can't supply you, write us.

TIOGA MILL & ELEVATOR CO. Waverly, N. Y.

Use the TI-O-GA Dairy Feed which forms a balanced ration with your own roughage.

TI-O-GA FEED SERVICE

You Don't Need A Pile of Money

Every Cow—Hog—Hen Farmer Can Use *JAMESWAY* Plans and Equipment

You'll be surprised at how little it costs to own and enjoy a Jamesway equipped, work-saving dairy barn, a sunny sanitary hog barn, or a comfortable, ventilated poultry house to increase your earnings. Write and get our Jamesway "Pay from Earnings" Plan on stanchions, stalls, carriers, water bowls, etc. As little as $10 to $12 per month will give you the finest dairy barn equipment you could want on this plan. And think of the increased earnings, shortened hours of labor, and a more pleasant place to work in!

Equip your hog barn and poultry house on same plan. Think of only $6.00 or $8.00 per month and increasing your egg profits with feed saving, metal self-feeders, waterers, self-cleaning metal nests. Also complete ventilation system. Hens can't help but lay more eggs in such a poultry house.

Our New Jamesway Book Sent FREE—

will tell you how you can have these advantages. Also tells how increased earnings soon pay their cost—and yield clear profits afterwards. If building, or remodeling, be sure to get Jamesway plans first. Our local Jamesway man will be glad to call and help you. Write today and mention how many cows, hogs, chickens, etc. you keep.

Are You Satisfied?

"Am I satisfied? I should say I am, and *more* than that. This Unadilla has made life a lot easier for me."

"See that ladder? Well, it can't slip. It's a permanent part of the silo, and when the hoops need adjusting I just climb up and they're all within easy reach. And say—pitching silage out is a *cinch!* No more back breaking work tossing it out over *my* head. I shove it out thru the air-tight, water-tight doors that *always open at the level of the silage!* I wouldn't trade my Unadilla for twice its cost if I couldn't get another.

"Recommend it to you? I certainly do! Write the Unadilla Silo Company for their big catalog. They'll give you all the information and they'll treat you right, too! Give you easy time payments if you want."

Ration for Work Horses

I am feeding my horses alfalfa hay and corn. Is this a good ration and how much should be fed when the horses are idle and when they are doing farm work?—R. P. B., Lancaster County, Pa.

Alfalfa hay and corn will make a very satisfactory ration for work horses when idle or when at work. Such combination of feed is not quite as safe in the hands of all feeders, for greater care must be exercised, as when oats and timothy hay or mixed hay are fed.

The alfalfa hay in a highly nitrogenous feed and if the horses are allowed to eat all they care for they will eat too much and overload the system with an excess of highly nitrogenous material which must be eliminated thru the kidneys. This is likely to overwork them and lead to a chronic inflammation if the feeding is continued for a long period.

To Avoid Sweating

Some drivers state that horses receiving a sole roughage of alfalfa hay will sweat a great deal which can be avoided by careful feeding and the addition of a small amount of other roughage, such as straw or timothy hay.

Idle horses should be fed a grain allowance of about three-quarters pound of grain and one pound of roughage daily for each 100 pounds of weight. Horses doing hard work should be fed one and one-quarter pound of grain and three-quarters pound of hay daily for every pounds of weight.

Part of the roughage allowa for idle horses may consist of str Care must be exercised that the falfa hay that is fed is free fr dust or mold. With proper care feeding there is no reason why th alfalfa and corn ration should be entirely satisfactory.—W. H. To have.

Farmers Winter Cour

THE Farmer's Winter Cou opened at the Pennsylva State College on January 8 with enrollment of sixty-five students. dications are that this number w be increased to at least 100 by Ja uary 26, when the special t weeks' course in ice cream begins.

Dairy and horticultural subje seem to be the most popular amo the winter course students as ei teen have enrolled in the spe dairy manufacturing course eleven have registered in hortic ture. The remainder are taking ge eral subjects, including cereal cr livestock feeding, judging and ma agement; soils; farm poultry; fa management; plant and animal d eases, insect identification and co trol, and farm machinery.

Ample opportunities to apply th principles learned in the class ro will be given to the winter cou students, as much of their time w be spent in the model dairy ba the new beef barn, the stock judgi pavilion, the green house, or t poultry plant, and the departmen laboratories.—A. L. Beam.

During the Winter Months

THE condition of the lamb and wool crop will depend to a very considerable extent upon the care and management of the flock during the winter months. The aim should be to use all home grown feeds so far as possible. This practice will result in a greater net income from the crops produced on the farm than is the case when much of the feed is purchased on the market. Care must be exercised, however, that the feeds used are of such a character as to bring the ewes thru the winter in good condition.

The ewes that are bred for spring lambing should be gaining in weight during the gestation period. The amount to gain will depend upon the condition of the ewes during the breeding season.

A ewe that has been suckled down to a thin condition should gain about twenty-five pounds in weight by the time the lamb is born. This increase in weight will cover the weight of the lamb and the growth of fleece, as well as improved body condition. This increase in weight can easily be made if the ewe receives good wholesome feed and enough to satisfy her appetite.

Roughage for the Ewes

The roughage to feed the ewes should consist of good clover or alfalfa hay and a small allowance of good silage, if the latter is available. As much hay should be fed as the ewes will eat while the silage should be restricted to about three pounds per day to a mature ewe.

During the early part of the winter, or gestation period, it will not be necessary to feed grain if the roughage is of good quality. During the last six weeks of the gestation period it is desirable to feed about one-half pound of grain per day. This grain should consist of bran, corn and oil meal if these fe are all available. Oats alone often fed to good advantage, but mixture will add variety and will relished by the ewes.

A mixture of three parts o three parts corn, three parts br and one part oil meal by wei makes a desirable grain combinat for ewes. This may be varied depe ing upon the kinds of grain feed hand and the kind and quality hay that is being fed.

Exercise Is an Essential

Exercise is very essential breeding ewes. They should be tu ed out in a paddock or pasture ev day that the weather will perm The lots should be dry as ewes not do well when forced to exer in lots that are muddy. The ew can be made to take exercise if small amount of clean corn sto is scattered thinly over a consid able area of the lot in which sheep exercise.

The ewes should not be turned during winter rains. Such treatm is likely to result in the ewes co tracting colds which often result a case of pneumonia from wh they do not readily recover and th will also lose in weight. Dry co weather will not hurt strong, heal ewes.

The ewes should have free acce to clean water and salt. If the wat can be provided so that it is not cold a greater amount will be co sumed and the sheep will make be ter use of the feed consumed.

The suggestions made here a easy to carry out and if followed w result in a good crop of wool a lambs, which are the two sources income from the breeding flock.—W. H. Tomhave.

There are "extras" throughout the entire construction of the Hood Red Boot. Extra thick soles of tire-tread rubber—red uppers which have set a new standard for life without checks or cracks. Extra reinforcements where the greatest wear comes. But the big, outstanding extra is WEAR—extra wear under all conditions.

You can take WEAR as the symbol of Hood Service. The Kattle King—Hood Arctics—White Rock Rubbers—cut down shoe bills by giving longer wear. All with greater foot comfort and finer appearance. Use the name Hood as your buying guide. It is a *time tested guarantee* of design, materials and workmanship.

New

New value—new quality—a new line of Chevrolet models far better than ever before. The public has recognized that Chevrolet represents a high standard of quality at low cost. As a result Chevrolet has become the world's largest producer of automobiles with standard three-speed transmission. Now this Chevrolet quality has been greatly increased. The new Chevrolet embodies quality features such as you would expect to find only on cars of much higher price.

New chassis—with a larger, stronger frame; new semi-eliptic chrome vanadium steel springs; new and stronger front axle; completely new rear axle of finest construction—banjo type with one piece, pressed steel housing and greatly strengthened gears; improved fully enclosed, dry plate disc clutch which requires no lubrication; extra heavy brake bands on big 11-inch brake drums; a new and easier steering mechanism and many improvements on the famous Chevrolet motor.

New bodies—of even greater beauty and comfort. Open bodies are longer and have new windshield with very low bottom panel, rubber weather stripped. All models have cowl lights and new instrument board refined and cut away for more leg room. The new radiator is of more beautiful design, made of non-rusting airplane metal. All closed models have new and exceptionally beautiful Fisher bodies with the new VV type closed body one piece windshield and automatic windshield wiper.

New finish—all models are now finished in Duco, the new finish that retains its color and lustre almost indefinitely and withstands very much harder usage. Here, again, is a quality feature hitherto not found in other low-priced cars. The new Chevrolet open models and coach are finished in rich dark blue—on the sedan is used a beautiful aqua marine blue for lower panels and hood, upper panels in black—coupe with lower panels and hood in sage green, upper panels in black.

Disc wheels and balloon tires optional at small additional cost

Those 1924 Potato Prices

Why the Growers Suffered Heavy Losses on the Crop

(Continued from last week)

THE potato crop estimates issued for October and November 1 by the U. S. Department of Agriculture showed large increases over previous estimates. The favorable fall weather, open until along in October, kept the crop growing later than in most years. City dealers and consumers at once jumped to the conclusion that, low as potatoes then were, they must go still lower in price.

In the past there has always been a very heavy storage of potatoes in cities, tho of course the bulk of the crop is always held on the farm. Millions of families in suburbs of our cities and in villages have cellars. A small family will buy ten or fifteen bushels. A large family of foreign descent may buy forty or even fifty bushels. This year the news of the government crop estimate, combined with the very poor quality of many rot infected or frosted potatoes prevented a very large part of this normal potato storage. City dealers and grocers, too, have greatly reduced their stocks below their usual supplies. Each buyer felt sure that he or she was safe in holding off for lower prices.

What Happened in Fall of 1921

It is most interesting to note here what happened in September, October and November of 1921. The potato estimate that year was a small one, 361,659,000 bushels. In the corn

The Bureau of Agricultural Economics at Cornell University, under Prof. G. F. Warren, has been studying the records of potato prices at New York City for nearly sixty years, together with the estimates of potato production and the census reports on population. These records show that for many years potato consumption has been gradually increasing.

The records of carlot shipments kept by the Department of Agriculture at Washington since 1916 show that shipments are increasing very fast. The 1924 potato crop is the eighth in size among the last thirty, in per capita production.

Prices and Consumption in 1922-23

Two years ago, in 1922, there was another season when potato production records were broken. That year's 453,396,000 bushels was just a little under this year's 454,784,000. In the five great northern potato producing sections, those of Maine, New York, Michigan, Wisconsin and Minnesota, which with Pennsylvania make up our six big potato states, prices in the fall were the lowest since 1914. The Department of Agriculture's daily market reports showed an average price for carlots on track in these sections of eighty-five cents per 100 pounds on November 1, or fifty-one cents per bushel to the shipper, whether dealer or grower.

belt there are many manufacturing cities supplied in summer and fall nearby growers, and with drought he crop here was very light. Every then had in mind the price of $1.00 a bushel to growers following short crops of 1916 and 1919. Just as buyers have held off this ar, they all rushed together to buy the fall of 1921. Potatoes sold ll fall at prices but little below the ice of wheat per bushel. Shipments broke all records. In September and October 26,040 and 43,250 loads were reported shipped. For ree days in succession over 2000 s were shipped.

The strange thing about this mar- t was that the immense shipments re so completely absorbed by the unusual demand for storage that ces held up under shipments hich would have demoralized the rket any other season. Later shipments fell off fast. Price did not e in proportion, for a large part the normal winter demand had en satisfied already.

Potato Consumption Increasing

This year potato market conditions the exact opposite of those of 1921. Prices started very low, with uyers holding off and generally refusing to store the usual quantity. Many thousands of carloads will be required this winter and next spring to meet the demand which in normal years has been satisfied by fall storage.

The result of the very low prices was to stimulate greatly potato consumption in the cities. The chain store idea had just begun to be popular. For many years city groceries had made a practice of keeping up potato prices to the consumer, no matter how much or how little the grower received. There were no low prices to stimulate consumption in big crop years, and a big surplus was generally left, to drive down prices in winter and spring.

Here the thousands of little chain grocery stores under centralized management found a golden opportunity. They could buy a carload of potatoes delivered in the city for sixty, seventy or eighty cents a bushel, and advertise in the daily papers potatoes at prices so far below those of the old time groceries that consumers jumped to buy and eat. Consumption went up fast. The carlot movement for the 1922-23 season broke all records with 254,546 cars.

Towards spring, in March, the heavy consumption had so far used up the record crop that prices rose. By April 1 the same five northern shipping sections were receiving an average price of $1.27 per 100 pounds, equal to seventy-six cents per bushel, and representing an increase of fifty per cent over the price of November first. The high price continued thru April and May.

For many years back of 1921 and 1922, spring prices for potatoes could

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

The Story Thus Far

BART BAYNES was an orphan who lived on a farm in Lickitysplit with his Aunt Deel and Uncle Peabody Baynes. Aunt Deel was a little beyond forty, jealously devoted to her brother, Uncle Peabody.

In 1831, when the story opens, Bart was a small lad of seven who was always getting into trouble, worrying his maiden aunt and bachelor uncle unmercifully. One day during that year Bart had his first glimpse of the Silent Woman—Rovin' Kate—who told his fortune. Tho he must encounter four great perils he would be strong and the friend of many people.

Early in his career Bart found a friend in the Comptroller of Canton Village, Silas Wright. The great man became much interested in the child and sent him books—a treasure indeed in that unread household. Not long after this Mr. Wright was elected to the United States Senate.

With 1837 came evil days. Wild speculation in land and the American paper-money system brought rough going. There was little money. Uncle Peabody had signed a note for his cousin, Rodney Barnes, sometime before and was afraid he would have to pay it. Amos Grimshaw held a note on the Baynes farm. When it came due he demanded payment but gave three months to see what could be done. So next day Bart, dressed in his "fine suit o' clothes," and Uncle Peabody made ready for a trip to Canton to ask Senator Wright for advice and help.

Continued

SINCE that dreadful day of the petticoat trousers my wonder had been regarding all integuments, what Sally would soy to them. At last I could start for Canton with a strong and capable feeling. If I chanced to meet Sally Dunkelberg I need not hide my head for shame as I had done that memorable Sunday.

"Now may the Lord help ye to be careful—awful, terrible careful o' them clothes every minute o' this day," Aunt Deel cautioned as she looked at me. "Don't git no horse sweat nor wagon grease on 'em."

To Aunt Deel wagon grease was the worst enemy of a happy and respectable home.

We hitched our team to the grasshopper spring wagon and set out on our journey. It was a warm, hazy Indian-summer day in November. My uncle looked very stiff and sober in his "new" clothes. Such breathless excitement as that I felt when we were riding down the hills and could see the distant spires of Canton, I have never known since that day. As we passed "the mill" we saw the Silent Woman looking out of the little window of her room above the blacksmith shop—a low, weather-stained, frame building, hard by the main road, with a narrow hanging stair on the side of it.

"She keeps watch by the winder when she ain't travelin'," said Uncle Peabody. "Knows all that's goin' on—that woman—knows who goes to the village an how long they stay. When Grimshaw goes by they say she hustles off down the road in her rags. She looks like a sick dog herself, but I've heard that she keeps that room o' hers just as neat as a pin."

NEAR the village we passed a smart-looking buggy drawn by a spry-footed horse in shiny harness. Then I noticed with a pang that our wagon was covered with dry mud and that our horses were rather bony and our harnesses a kind of lead color. So I was in an humble state of mind when we entered the village.

There was a crowd of men and women in front of Mr. Wright's office and thru its open door I saw many of his fellow townsmen. We waited at the door for a few minutes. I crowded in while Uncle Peabody stood talking with a villager. The Senator caught sight of me and came to my side and put his hand on my head and said:

"Hello, Bart! How you've grown! and how handsome you look! Where's your uncle?"

"He's there by the door," I answered.

"Well, le's go and see him."

Then I followed him out of the office.

MR. WRIGHT was stouter and grayer and grander than when I had seen him last. He was dressed in black broadcloth and wore a big beaver hat and high collar and his hair was almost white. I remember vividly his clear, kindly eyes and ruddy cheeks.

"Baynes, I'm glad to see you," he said heartily. "Did ye bring me any jerked meat?"

"Didn't think of it," said Uncle Peabody. "But I've got a nice young doe all jerked an' if you're fond o' jerk I'll bring ye down some to-morrer."

"I'd like to take some to Washington but I wouldn't have you bring it so far."

"I'd like to bring it—I want a chance to talk with ye for half an hour or such a matter," said my uncle. "I've got a little trouble on my hands."

"There's a lot of trouble here," said the Senator. "I've got to settle a quarrel between two neighbors and visit a sick friend and make a short address to the Northern New York Conference at the Methodist Church and look over a piece of land that I'm intending to buy, and discuss the plans for my new house with the carpenter. I expect to get thru about six o'clock and right after supper I could ride up to your place with you and walk back early in the morning. We could talk things over on the way up."

"That's first rate," said my uncle. "The chores ain't much these days an' I guess my sister can git along with 'em."

The Senator took us into his office and introduced us to the leading men of the county. There were: Gurdon Smith, Ephriam Butterfield, Lemuel Buck, Baron S. Doty, Richard N. Harrison, John L. Russell.Silas Baldwin, Calvin Hurlbut, Doctor Olin, Thomas H. Conkey and Preston King. These were names with which the Republican had already made us familiar.

"Here," said the Senator as he put his hand on my head, "is a coming man in the Democratic party."

The great men laughed at my blushes and we came away with a deep sense of pride in us. At last I felt equal to the ordeal of meeting the Dunkelbergs. My uncle must have shared my feeling for, to my delight, he went straight to the basement store above which was the modest sign: "H. Dunkelberg, Produce." I trembled as we walked down the steps and opened the door. I saw the big gold watch chain, the handsome clothes, the mustache and side whiskers and the large silver ring approaching us, but I was not as scared as I expected to be. My eyes were more accustomed to splendor.

"Well I swan!" said the merchant in the treble voice which I remembered so well. "This is Bart and Peabody! How are you?"

"Pretty well," I answered, my uncle being too slow of speech to suit my sense of propriety. "How is Sally?"

The two men laughed heartily much to my embarrassment.

"He's getting right down to business," said my uncle.

"That's right," said Mr. Dunkelberg. "Why, Bart, she's as spry as a cricket and pretty as a picture. Come up to dinner with me and see for yourself."

UNCLE Peabody hesitated, whereupon I gave him a furtive nod and he said "All right," and then I had a delicious feeling of excitement. I had hard work to control my impatience while they talked. I walked on some butter tubs in the back room and spun around on a whirling stool that stood in front of a high desk and succeeded in the difficult feat of tipping over a bottle of ink without getting any on myself. I covered the multitude of my sins on the desk with a newspaper and sat down quietly in a chair.

By and by I asked, "Are you 'most ready to go?"

"Yes—come on—it's after twelve o'clock," said Mr. Dunkelberg. "Sally will be back from school now."

My conscience got the better of me and I confessed about the ink bottle and was forgiven.

So we walked to the big house of the Dunkelbergs and I could hear my heart beating when we turned in at the gate—the golden gate of my youth it must have been, for after I had passed it I thought no more as a child. That rude push which Mr. Grimshaw gave me had hurried the passing.

I was a little surprised at my own dignity when Sally opened the door to welcome us. My uncle told Aunt Deel that I acted and spoke like Silas Wright, "so nice and proper." Sally was different, too—less playful and more beautiful with long yellow curls covering her shoulders.

"How nice you look!" she said as she took my arm and led me into her playroom.

"These are my new clothes," I boasted. "They are very expensive and I have to be careful of them."

I REMEMBER not much that we said but I could never forget how she played for me on a great shiny piano—I had never seen one before—and made me feel very humble with music more to my liking than any I have heard since—crude and simple as it was—while her pretty fingers ran up and down the keyboard.

I behaved myself with great care at the table—I remember that— and, after dinner, we played in the dooryard and the stable, I with a great fear of tearing my new clothes. I stopped and cautioned her more than once: "Be careful! For gracious sake! be careful o' my new suit!"

As we were leaving late in the afternoon she said:

"I wish you would come here to school."

"I suppose he will sometime," said Uncle Peabody.

A new hope entered my breast, that moment, and began to grow there.

"Aren't you going to kiss her?" said Mr. Dunkelberg with a smile.

I saw the color in her cheeks deepen as she turned with a smile and walked away two or three steps while the grown people laughed and stood with her back turned looking in at the window.

"You're looking the wrong way for the scenery," said Mr. Dunkelberg.

She turned and walked toward me with a look of resolution in her pretty face and said:

"I'm not afraid of him."

We kissed each other and, again, that well-remembered touch of her hair upon my face. But the feel of her warm lips upon my own—that was so different and so sweet to remember in the lonely days that followed! Fast flows the river to the sea when youth is sailing on it. They had shoved me out of the quiet cove into the swift current—those dear, kindly, thoughtless people! Sally ran away into the house as their laughter continued and my uncle and I walked down the street. How happy I was!

We went to the Methodist Church where Mr. Wright was speaking but we couldn't get in. There were many standing at the door who had come too late. We could hear his voice and I remember that he seemed to be talking to the people just as I had heard him talk to my aunt and uncle, sitting by our fireside, only louder. We were tired and went down to the tavern and waited for him on its great porch.

I observed with satisfaction that the village boys did not make fun of me when I passed them as they did when I wore the petticoat trousers. Mr. and Mrs. Wright came along with the crowd, by and by, and Colonel Medad Moody. We had supper with them at the tavern and started away in the dark with the Senator on the seat with us. He and my uncle began to talk about the tightness of money and the banking laws and I remember a remark of my uncle, for there was that in his tone which I could never forget:

"WE POOR people are trusting you to look out for us—we poor people are trusting you to see that we get treated fair. We're havin' a hard time."

This touched me a little and I was keen to hear the Senator's answer. I remember so well the sacred spirit of democracy in his words.

"I know it," he answered. "I lie awake nights thinking about it. I am poor myself, almost as poor as my father before me. I have found it difficult to keep my poverty these late years but I have not failed. I'm about as poor as you are. I guess I could enjoy riches, but I want to be poor so I may not forget what is due to the people among whom I was born—you who live in small houses and rack your bones with toil. I am one of you, altho I am racking my brain instead of my bones in our common interest. There are so many who would crowd us down we must stand together and be watchful or we shall be reduced to an overburdened, slavish peasantry, pitied and despised. Our danger will increase as

TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 6 (reading across) is F L O A T, and 12 (reading down) is S H A D. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. A kind of broth
2. A valuable food grain
3. To slant
4. A woman devoted to a religious life
5. Weed found in wheat—mentioned in Bible parable
6. To rest on the surface of a liquid
7. Abbreviation of a masculine title
8. Conjunction used with "either"
9. A hut or sheepfold
10. Dismal
11. Meadow
12. Foot covering
13. To hatch or produce
14. To assist
15. Closed
16. A hook to hold anything close
17. To strike with repeated blows
18. A shell-fish often baked at country frolics
19. An expression of mirth
20. Extending far below the surface
21. Possessed
22. Large books
23. Without heat
24. Point of compass
25. A pronoun
26. Wanders
27. To occupy completely
28. Latin prefix meaning "by" or "over"
29. A cloth used for drying
30. Ceremony
31. Wheeled vehicles
32. Sedate, steady
33. A group, usually twelve, selected to hear and weigh evidence in court
34. To bend without angles
35. The lobby of a theatre
36. Unencumbered
37. The national assembly of Spain
32. Point of compass, abbreviation
33. Junior, abbreviation
34. County, abbreviation
38. Possessive pronoun
39. Prefix meaning "not"
40. Anger
41. Christian Endeavor, abbreviation
42. To put on as much as can be carried
43. A pole used in rowing
44. Liquid measure, abbreviation
45. To ensnare
46. Measured lines of poetry

READING DOWN

1. A person who apes gentility
2. A price fixed or stated
3. Slumber
5. To sound, as a horn or flute
6. New, unfaded
7. To dissolve
9. Intimate friend
10. Draws along slowly
11. To jump or spring over
12. A fish valued for food
13. Gloomy feelings
14. To give careful attention
15. A thin narrow strip of wood or metal
16. An animal with a hump
17. A cup-shaped object which gives a ringing sound when struck
18. A pert child
19. One who has passionate affection for another
20. To deal out sparingly
22. To rise to a great height
23. A large and important town
24. To perform duties for
25. A loose outer garment
27. That which burn
28. A portion
29. A plaything
30. To lament or be sorry for
31. A mongrel dog

The Scotsman, away on his annual vacation, was head over heels in love with a certain young "girl he left behind him." At last he could stand the suspense no longer, and, going to the telegraph office, he at once sent off a telegram asking her if she would marry him. That happened in the morning and he spent the entire day in the office waiting for a reply. That night a call came thru accepting him.

"If I were you," said the operator, when at last he was leaving, "I should think twice before I'd marry a girl who kept me waiting all day long for an answer."

"Na, na," retorted the Scot. "The girl who waits for the reduced night rates is the lass for me."—Los Angeles Times.

"I learn thru your agent that you have bought the houses on either side of your residence and got them dirt cheap," said Grey. "How did you manage it?"

"Easily enough," replied White "My wife is an elocutionist, my daughter plays the piano, George plays a cornet, I play the violin, Bob plays a banjo, Charlie rattles the bones and Johnnie has a jazz drum."—American Mutual.

Mr. Nulywed—What an enormous pie! It looks like a football, dear.

Mrs Nulywed—But, Arthur, that was the smallest pumpkin I could find

---

Visitor—"We're getting up a raffle for a poor old man. Won't you buy a ticket, my dear?"

Sweet Girl—"Mercy, no! What would I do with him if I won him?"

The Blades That Cut Farming Costs—and Build Profits!

HERE is the "business end" of the world's best spreader—the distributor blades that have increased harvests on thousands of American farms during the past twenty-five years—by making *fullest possible use* of Nature's greatest soil food.

The NEW IDEA SPREADER

The shape of the blades—and their relative position to each other—is the secret of New Idea efficiency This feature is covered by patents and can be had only on the New Idea Spreader.

In the New Idea Model 8 you will find every single feature that you could wish for in a spreader. Sturdy construction—simple efficient mechanism—low bed—auto steer front axle—these and many other genuine advantages make the New Idea the best spreader you can possibly buy.

See this spreader at your dealer's or write us for literature

THE E-B LINE

Quality Plows For All Work

No matter what your soil conditions may be, you will find an E-B Plow that will handle your work economically. The E-B plow family is complete—walking plows, sulky and gang plows, disc plows, tractor plows and a special Fordson plow. E-B plow bottoms include both steel and chilled in wide variety to meet any soil condition.

All E-B plows combine the three important essentials of a satisfactory plow—ease of handling, light draft and durability. The riding and tractor plows are equipped with E-B Quick Detachable Shares which can be put on or taken off in 5 seconds without tools.

Be sure to get free circulars describing E-B plows. And remember, whatever farm machine you need, you will find it in the E-B Quality Line.

Our Young People's Forum

Dear Forum Friends:—Well, we never do know what's going to happen next, do we? I started a letter to you three days ago and planned to finish it last night and didn't I fall fast asleep right in the middle of a sentence! And here it is time for the paper to be speeding on its way and I haven't a glimmer of a thought in my head with which to finish that half-written letter! Your letters are getting more and more interesting all the time. How I should miss them if you didn't write. With very best wishes for everybody.

COUSIN RUTH.

From Forum Friends

Dear Forum Friends and Cousin Ruth:—As soon as I come home for my dinner on Friday I get the paper and open it to the Forum page.

Wake up, Chester County boys and girls. I have not seen any letters from our county for a long while. Cousin Ruth, may I write a recipe?

GOLDEN CREAM CAKE

Cream together:

1 cup sugar
1½ cup butter or lard
1½ cups flour
1 cup sweet milk
2 teaspoons baking powder

Fold in the stiffly-beaten whites of 3 eggs, make a filling with

3 egg yolks beaten very light
1½ cup sugar
1 teaspoon vanilla.

Thin with rich, sweet cream and put between layers and on top.

My sister told me to ask you if she may write to your happy circle. Her name is Ida.—Hazel E. V. Brown, Chester County, Pa.

HAROLD AND HIS SCHOOLMATES
Harold Barcalow, Bucks County, Pa.

Tell Ida we'll be glad to have her join our crowd any time.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I enjoy reading the Forum page a lot. We have a dog, Jerry, that can do a few tricks like sit up, speak, sing and jump to catch a piece of candy.

I hope that all of the boys and girls are enjoying the snow which we had. Dear Cousin Ruth, write more letters.—Dorothy E. Reuter, Gloucester County, N. J.

Dear Cousin Ruth:—I was glad to see your picture in Pennsylvania Farmer. I have long golden curls and so my brother and sisters and mother all call me Dolly. Last winter I spent with my grandmother and grandfather at Sacramento, California, and had a wonderful time, but I was glad to see my mother and sisters in the spring. I like to help my sister plant and make hay in the summer time. It is lots of fun. I have two pet kitties and my older sister has a cat. I don't believe in children being mean to kitties, because they have feelings, too.—Velma Walke, McKean County, Pa.

I wonder, Velma, whether you couldn't tell us about your visit in California. You see, I've always wanted to go there myself and I always enjoy hearing about the country from folks who have been there.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I'm sure you would like to hear of a little girl just nine years old from the village of Goodyear.

I go to school most every day, except when I am ill; thru mud and snow a mile or more, to the stone shack on the hill. The grade I'm in they call the fifth, I sure do have to grind,'cause the other kids are workin' too,—to let me on behind. But Daddy says, just keep it up, for you have got the pep, and the chap that lets you in the lurch, will surely have to step.

I live on the farm of "Sunny Lea," with acres, not quite twenty to keep horse, cows and hogs,—and Hollywood hens a-plenty.

Oh! I almost forgot to tell of my pets, and that would be a great crime. For wherever I go, they are on my heels, not one—but six at a time. I call them Tige Senior, Junior and Spot, Young Malties,—Nigger and Tabby,—I almost forgot.

Well! Now, Cousin Ruth, I must close for this time. Perhaps at your leisure you'll drop me a line.—Lucile Paxton, Cumberland County, Pa.

Perhaps, but I couldn't do as well as you, I fear!

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I like the Young People's Forum very much. Every Friday when we get the paper the first thing I read is the Y. P. F. I hope we shall continue to keep this page in the paper for a long time.

We had a Christmas entertainment at our schoolhouse. We had a play in which I had 115 speeches. We also had many more things which everybody enjoyed. We had nearly two weeks' vacation.—Florence L. Wessels, Montgomery County, N. Y.

Dear Cousin Ruth and Forum Friends:—I go to Ward School. On December 24 we had a Christmas tree and a picnic dinner. We all brought something. I got a lot of things this year for Christmas and Santa Claus was very good to me. I have a dog named Mollie. She is yellow and is very much like a fox.

I have a recipe to give you, it is very funny.

DOUGHNUTS

One cup of sugar, one cup of milk,
Two eggs beaten fine as silk,
Salt and nutmeg, lemon will do,
Of baking powder teaspoon, two.
Lightly stir the flour in.
Cut in diamonds, twists or rings,
Drop with care the doughy things,
Into fat that briskly swells,
Evenly the spongy cells.
Watch with care the time for turning,
Fry them brown, just short of burning.
Roll in sugar, serve when cool.
Price a quarter for this rule.

Helen Hanagan, Susquehanna County, Pa.

Dear Cousin Ruth:—I have just gotten thru making some soup for supper. We have a lot of snow but I can not ride down hill because mama is away and my sister is away, so I have to take care of the children, Edna and Arthur. Edna is five and Arthur is three.—Mable Foote, Susquehanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I am eleven years old and am in the seventh grade at school.

I live on a small farm. We have two horses and I can ride both of them. We have six geese and the gander is so ugly that my little brother is afraid to go out of the house when he is around. I have four brothers and two sisters and one niece. May I send a few riddles, Cousin Ruth?—Guy Mayo Sayman, Sullivan County, Pa.

I'm sorry you didn't send the answers to the riddles in your letter. You see I have to have the answers before printing riddles.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I am nine years old and am in the fourth grade. I cook for my mother. I have two sisters and three brothers. I have a sister and brother that go to school with me. My brother Edward is a baby. He is seven months old. I have one cat and he is called Coney. I got a doll for Christmas.—Virginia Oppermann, Berkshire County, Mass.

"GREETINGS, FORUM FRIENDS."
Audrey Sieber, Juniata County, Pa.

Dear Cousin Ruth and Forum Friends:—It has been snowing today. My younger sister and I went sledding this afternoon. Our dog, Rover, went with us. He likes the cold weather. We made a little house for him. We have a cat, too. We had two weeks Christmas vacation.—Laura Fawsett, Delaware Co., Pa.

Dear Cousin Ruth and Forum Friends:—In my last letter I said I was going to send a picture of the pet crow, Pete, but he has been missing for quite a while and we missed him very much at first. He was very cute and knew many tricks. He would come to school with us, and would fly about the trees. The school children would feed him. He would wait on the bridge for us when we were coming from school.

In the morning he would peck on the windows, and wake us up, for he wanted breakfast. The school children miss him and so do I.

For pets I have a little white kitten; his name is Ching and he is part Angora, and two little gray kittens. I also have two big cats. I had a yellow cat; his name was Fritz and he has been missing for two weeks.

We are boarding eleven ponies and a donkey and we also have some horses boarding.

I have a sister, Mary, who is fourteen, and a brother, Junior, who is eight years old. We have great fun playing and sliding up in our big barn.

My sister and I play the piano. I play jazz and other kinds. I like it very much. We also have a banjo-uke each, and play a lot of pieces.

We have some snow in Monmouth County. It is snowing hard and we have great fun playing games in it. My little white kitten doesn't know what to think of it for he hasn't ever seen snow before.—Evelyn Farry, Monmouth County, N. J.

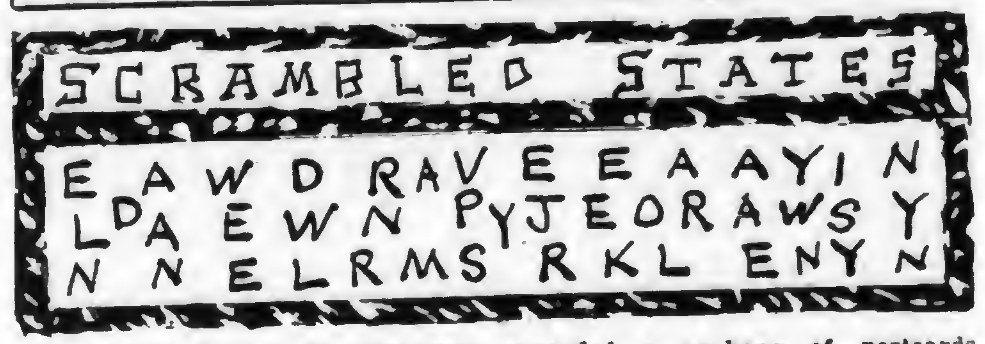
OUR LITTLE FOLKS' PUZZLE CORNER



SCRAMBLED STATES
E A W D R A V E E A A Y I N
L D A E W N P Y J E O R A W S Y
N N E L R M S R K L E N Y N

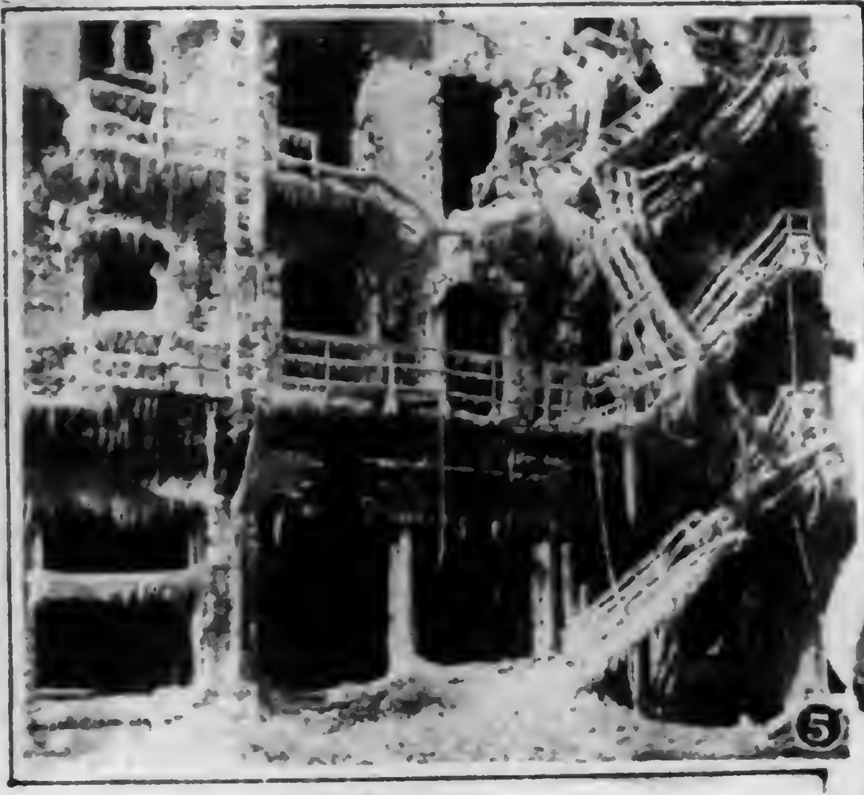
Dear Little Folks:—To "unscramble" these states, first look for letters which spell the name of the state you live in. Almost all the answers I receive come from the five states whose names you can spell with the letters in the picture. When you have found one state, cross out the letters which make its name and write that name down; then look thru the letters you have left and you will find those which spell the names of states not far from the one you make out first. I certainly hope none of you get lost wandering around this way because the little friends I hear from each week seem very real. When you have found the five states send their names to me on a POSTAL CARD not later than January 31. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 259-263 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the January 3 issue of Pennsylvania Farmer is: FROG-CROAK; BIRD-SONG; SNAKE-HISS; BEE-HUM; LION-ROAR; DOG-BARK; HEN-CACKLE.

The prize winners are: W. M Fredd, Jr., age 10, Oxford, Pa.; Edith Haversang, age 10, Caldwell, N. J.; Preston Keller, age 13, Sunbury, Pa.; Gertrude E. Meyers, age 10, Greencastle, Pa.; Roger Patterson, age 10, Glen More, Pa., Hazel E. Savacool, age 6, Newton, N. J.; Marila Tanner, age 12, Wampum, Pa.; Annabelle Walker, age 13, New Albany, Pa.; Paul E. Weaver, age 12, Union Grove, Pa.; Sarah Frances Wheaton, age 10, Bridgeton, N. J.

PASSING EVENTS IN PICTURES



Copyright by Underwood & Underwood.

1.—A Brooklyn boy and his prize winning picture—Duncan Campbell ranked first among 8000 contestants.

2.—The royal entry wins—Highland steer shown by the King in an agricultural show in London.

3.—Daughter of former President Cleveland, Mrs. W. S. Dell, arriving in this country to visit her mother.

4.—First woman in England to be "called to the bar." Mrs. Helena Normanton won the right to wear the robe and wig of the bar of the Middle Temple after a long struggle.

5.—King Winter turns this scene of a recent fire into a worthy exhibit in the "Chicago Beautiful" drive.

6.—Field spaniels which won first, second and third places in a show in England.

7.—Brother of the King of Siam touring the United States with his wife. The prince was educated at Eton.

8.—Indian chief his wife and nephew, who want the President to place a national Indian memorial day on the calendar.

9.—Approaching the starting point of a ski-race—four enthusiasts at Lake Placid.

Toning Up the Table Talk

Make Meal Times Happy Times for All the Family

MEAL time is about the only period when the family is together in the busy season, and then the meals are apt to be hurried because hired help is such an uncertain quantity and the weather still more uncertain. Many a mother realizes that the talk that goes on at meal time is not what it should be, but vaguely hopes that "when the children get out in the world" they will by some magic find acceptable topics of conversation.

How can children learn to talk well, if—as is the case in many homes—they are not permitted to speak at table? In our home the children have always had a modest share in the table talk. Why not? They are a part of the family, and they are always bubbling over with things to tell their Daddy whom they hardly see except at meals.

Good Cheer Improves Digestion

It is worth while to tone up the table talk from the standpoint of health. Children and adults hurry away from a gloomy table without having half chewed their food. Really it does no good to talk about butchering at table, or how naughty Johnny was at school, or about the faults of the school teacher, or the inefficiency of the minister, or the fact that neighbor Jones is not long for this world, or that there is graft and corruption in public office.

If you have anything pleasant to say about the road under construction, the ditch that will carry off the surplus water and make the farm more profitable, the good price you received for eggs, the fine grade made by one of the children at school, the coming entertainment in the Sunday school, or any one of a hundred encouraging, pleasant, helpful happenings, either in the neighborhood or heard by the telephone, radio or paper, bring it out and give everybody a chance to digest his food without gloom.

Let the Children Share

Encourage the children to save up little items from their small world and teach them to tell them quickly and well. The long drawn-out "And-a" of the story can be eliminated by a little practice, and there will be no need of talking with the mouth full of food.

It will take time to drive out the depressing talk and substitute cheerful conversation, but it can be done. And what is more, if you wish your children to be good conversationalists out in the world, and welcome guests at other people's tables, it must be done.—Hilda Richmond.

Next Year's Blooms

DEAR EDITOR:—When someone has given you a beautiful cyclamen plant, or poinsettia for the holidays, is there any way to keep the bulb or root over for blooming another year? Or are they all forced out, and really fit for nothing more? What treatment should they have, both while dormant and when coming again to life?—L. E. B.

Few, if any, of the greenhouse plants, do especially well when transferred from a warm, moist atmosphere to the hot dry atmosphere of the average living room. The cyclamen may be kept for a second season, but it will never give the wealth of bloom that it did the first.

Give the Plant a Rest

After the blossoms have died, give it a rest by putting it in a cool, shady place. Give very little water, but do not allow the bulb to become absolutely dry. It needs to have conditions favorable for the making of food supply to be stored in the bulb, from which it will draw when blossom time comes again. The leaves are the food factories, so the plant should be given a chance for the leaves to do their work after blossoming.

As early as August it should be given more favorable conditions: a sunny spot and more water, but never too much. We err more by watering too freely than too sparingly. After you have done all you can, prepare to be disappointed!

The Poinsettia

The poinsettia, if given ordinary care, will probably survive. It should be cut back very severely in the summer. The poinsettia belongs to the same family as the snow-in-the-mountain, an old favorite garden annual which has green and white leaves resembling a flower. The red of the poinsettia is not a flower, but a whorl of gaily colored leaves, bright to attract some insect to the tiny true flowers around which they are clustered.

The poinsettia, being a tropical plant, will not find conditions in this section right for the manufacture of its vivid color, so while it may live and even blossom, you may meet with the disappointment of having its whorl of leaves come out dull in color, or even just green.

I have known florists to cut off single branches from a large plant of poinsettia, stick the cuttings into pots of earth, and offer them for sale as plants. Of course these cuttings, having no root, will last only a short time.

Heather and Begonia

The white heather, if it has not been too much forced, will live and do fairly well under ordinary house conditions. All begonias are satisfactory if not given too much water. The one known as "Vernon begonia" will remain in blossom for months.—Orra Parker Phelps.

Percolator Tea

TEA is so good these raw cold winter days, so pleasingly warming to the men folks especially, after outside work. Tea, properly made, is scarcely injurious, and of course we all have our pet way of making it. But did you ever make it in your percolator?

Quite by chance we made ours thus one day. We were so pleased with the clear, just-right colored drink therefrom — neither black, strong nor insipid—that we pass the idea along.

Measure as usual. Put in percolator and make as you do coffee, taking care not to add so much water that the percolator cup will overflow. The tea will be clear, and free from grounds, even if loose tea is used instead of that put up in cheesecloth bags, as the nicest tea is put up today.

Use only freshly boiling water. Try this. See if it isn't convenient, and "heap good."—G. S.

Editor's note. We should like our expert tea-makers and coffee-makers to discuss this suggestion. If we own only one percolator (and most of us feel lucky to have even one) is it advisable to use it interchangeably for tea and coffee? Is a metal pot as good for tea-making as one of earthenware?

A steaming cup of tea is so good on a cold day.

Betty's Winter Sandbox

BETTY loved to play in the sand so much that when the outdoor sandpile became too cold and wet to be a safe place for her, I put a couple of inches of clean white sand in an old leaky galvanized tub for her to play in. This sand is always dry and the tub can be put on the stove till the sand is warm before setting it on the floor for Betty.

I put the warmed tub on an old sheet, dress the youngster in a cover-all suit tied shut at the feet, give her a spoon and a bottle, remind her that the sand must be kept in the tub, and leave her strictly alone. Like any healthy normal youngster, she plays happily by herself for an hour at a time.—Mrs. C. C. B.

SUCH A DINNER!

And What a Quilting Party It Turned Out to Be

ONE day an invitation came to me to attend one of those old-fashioned quilting bees that are told about in the song, "Aunt Dinah's quilting party." The note read:

On Wednesday morn December tenth,
Ye dames and maids on quilting bent
To Sister Elizabeth Alwyn's hie,
We'll have chicken dinner
And pumpkin pie.

When the day arrived, I sallied forth. About twenty of us were there, and how tongues and fingers did fly! We tied off six quilts. Three of the women had two quilts each to tie, so they clubbed together and furnished the dinner in return for our help.

Such a dinner! Chicken, mashed potatoes, creamed carrots, corn, pickles, olives, jelly, cabbage salad, biscuits, pumpkin and custard pie, coffee.

We met in the home that was nearest the village and had the largest rooms, so that we could put on two quilts at a time and speed the work. The quilts were very pretty when finished with their bright-colored yarns. Some of them were pieced wholly of mill ends purchased by the pound from a factory,—khaki and gray, blue and brown.

Before we left other women, even those with small homes, planned to have quilting parties in the same way.—Mrs. E. A. K.

Catering to the Men

Dear Editor:—As our men folk do not care for the various creamed vegetables that we like to serve, we thought that a recipe for braised celery might help us to get the vitamins to them in a shape they would enjoy. I thought perhaps you could supply this recipe. We had an appetizing dish under this name at a restaurant. It seemed to be stewed in a dark red-brown highly seasoned sauce.—B.

The "red brown highly seasoned sauce" is the one which the French chefs call "Espagnol" and has for its foundation a strong meat stock to which tomato gives the reddish color and various other vegetables and spices the high seasoning. Long cooking at the simmering point gives the sauce its richness.

The celery is cleaned and prepared as for stewing, but instead of being cooked in water, is braised in a closely covered dish in the oven, in about half as much of the "Espagnol" sauce as you have celery.

A short cut to making this sauce is to combine small amounts of several concentrated soups, such as beef broth, tomato soup, etc. These are sufficiently seasoned to suit most people, but a few drops of Worcestershire sauce and a little more onion may be added.—I. S. H.

Who Can Help?

IN READING the piece about fur and braid by Mrs. E. A. K., published in the December 27 number, I wondered if someone would please publish directions for preparing furs at home, such as squirrel, rabbit and opossum. I have several pieces caught this winter and would like to use them.—Mrs. C. I.

Back to the Old Time Stove

Will the Prophecy of Our Friends Be Fulfilled?

AFTER many years in furnace heated houses we have moved to an old house where we have to use stoves. Many of our friends said that of all the conveniences we left behind the furnace would be the one most missed, particularly when they discovered that we did not intend to have a base burner, or even one of the modern stoves that looks like a phonograph and is said to heat a number of rooms at small cost.

We have an old time sheet iron stove and a range. We intend to buy a medium sized soft coal burner if the wood fires are inadequate. The house is small with low ceilings so we look forward to the winter weather with curiosity but not apprehension.

So Far It Works Well

In three minutes after opening the sheet iron stove and throwing in a few kindlings we have a roaring fire and a torrid zone where it is fine to dress. When the furnace got low, as it occasionally did over night, it was an hour at least before the big rooms began to feel temperate, and we have had experience with three good makes of furnaces. The rooms were large and connected by arches, a very pleasant arrangement in summer, but no furnace can bring such a house to sixty-eight degrees in an hour. We have been more comfortable with our stoves so far than ever we were with any furnace up to nine in the morning.

Of course we have more fire tending to do and that will be a nuisance as it gets colder, but we had to work with the furnace, too, in bitter weather. The soft coal stove we shall buy is warranted to keep fire fifty hours and with our low ceilings we do not anticipate trouble. And, last but not least in these days of high prices, the cost will be less. Last year we spent one hundred dollars for the furnace alone but this year less than half will suffice from our experience so far, because the house is smaller and stoves take less fuel.—Mrs. Farmer.

Safeguarding Children

SOME of us are almost shut in this winter. It is hard to take the three little ones that are under school age outdoors every day but sometimes our work requires us to leave them alone in the house. Often we read of a child thus left being hurt while mother was out.

One thing I am thankful to own, as a means of keeping me within reach of the children while I am hanging out the clothes is my clothes line on pulleys. It costs less than $5.00. I can stand on the porch in hearing of the children at their play. If I hear no talking, running of playthings etc., I step up to the window and see that the employment that is keeping all so quiet is a safe one.

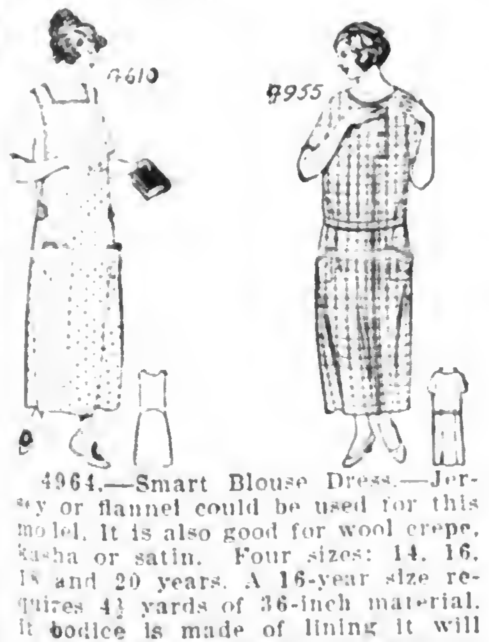
There is no better investment than household conveniences that lessen risks for the children and anxiety for the mother.—Mrs. M. F.

Home Dressmakers Delight

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S Third Street, Philadelphia, Pa.

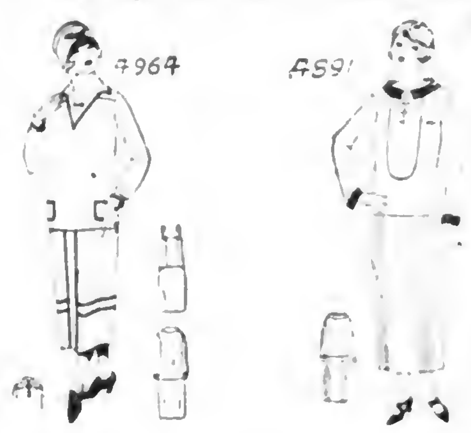
4610.—A Simple Apron Model.—One could make this apron of sateen or gingham. It is also attractive for cretonne with binding in a plain contrasting color, or, for unbleached muslin, with bands of striped seersucker. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2¼ yards of 27-inch material. Pattern, 10 cents.

4955.—For Stout or Slender Figures.—This becoming model is fitted by underarm darts. The style is plain but attractive, and is convenient and comfortable with its front closing. Eight sizes: 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size will require 3½ yards of 36-inch material. The width of the dress at lower edge is 1¾ yard. Pattern, 10 cents.

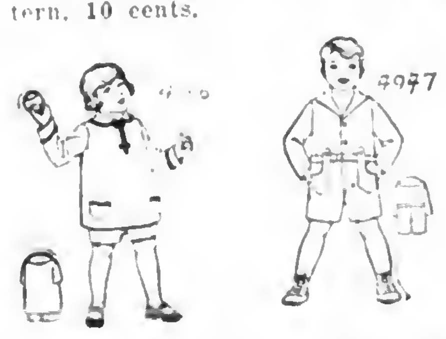


4964.—Smart Blouse Dress.—Jersey or flannel could be used for this model. It is also good for wool crepe, kasha or satin. Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 4½ yards of 36-inch material. If bodice is made of lining it will require three-quarters yard. Pattern, 10 cents.

4891.—A Stylish Frock.—Charmeen, flannel or kasha would be suitable for this style. It could also be made of satin or silk poplin, with contrasting material for collar and



cuffs. Three sizes: 16, 18 and 20 years. A 16-year size requires 5⅛ yards of one material 40 inches wide. To face collar and cuffs with contrasting material requires one-half yard. The width of the skirt with plaits extended is three yards. Pattern, 10 cents.



4566.—For Small Boys.—Wool jersey, serge, velveteen or corduroy could be used for this model. It is also suitable for wash materials. Three sizes: 2, 4 and 6 years. A four-year size requires 2¾ yards of 36-inch material. Pattern, 10 cents.

4947.—A Popular Suit.—This is an ideal play or school suit for a little boy. Velveteen, serge, jersey cloth or flannel may be used. Four sizes: 2, 3, 4 and 6 years. A four-year size requires 2¼ yards of 27-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1924-1925 Book of Fashions.

What is a Teaspoonful?

—it depends on the baking powder you use. You must use a heaping spoonful of many brands because they do not contain as much leavening strength as

CALUMET
THE WORLD'S GREATEST
BAKING POWDER

Level spoonfuls are all that are necessary when you use Calumet—it makes more bakings which means a real saving on bake-day.

The can of Calumet you buy today contains the same high quality leavener as did the first can ever made—the quality never varies. Last spoonful as good as the first. Save time, money and materials by using the perfect leavener—Calumet.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, **J. O. Johnson, 642 N. Broad St., Philadelphia**, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Crooked Spines Made Straight

OVER 50,000 REMARKABLE CASES

An old lady, 72 years of age, who suffered for many years and was absolutely helpless, found relief. A man who was helpless, unable to rise from his chair, was riding horseback and playing tennis within a year. A little child, paralyzed, was playing about the house after wearing a Philo Burt Appliance 3 weeks. We have successfully treated over 50,000 cases in 23 years.

30 Days' Free Trial

We will prove its value in your case. There is no reason why you should not accept our offer. The photograph shows how light, cool, elastic and easily adjusted the Philo Burt Appliance is—how different from the old torturous plaster, leather or steel jackets. Every sufferer with a weakened or deformed spine should write at once. Send for our free booklet. If you describe case it will aid us in giving you definite information at once. **PHILO BURT CO.,**

Would You Be Beautiful?

Practice Self Control and Find the Magic Key

NOTHING is sadder than a woman who might be attractive, but who has allowed herself to drift—making no battle against those many things which tear at beauty. Too often those who have passed thru soul travail come out of it bitter, hard and cynical, cheating themselves of peace and, indirectly, beauty. That is self indulgence, permitting the storms of life to master,—taking the easier road of disillusionment.

Thoughts leave indelible marks upon the face. Why not make those thoughts such as will carve beauty? We may believe that our cross, our sorrow or our burden is harder and more unfair than our neighbor's, but even if it were so, we do not lighten it by rebellion.

Control of Appetite

No woman can afford to permit herself a free hand in eating if she wishes to be beautiful. Our bodies burn the food we eat and we cannot hope to keep the fire burning satisfactorily if we throw all sorts of unfit fuel into it. We cannot expect a perfect skin, sweet breath, bright eyes and slenderness if we eat three heavy meals of rich food every day, munch on candies and fail to exercise.

If we could look into our stomachs and see the outrageous mixtures we put into them, we should be more careful how we treat our human machines. It would look far worse than a dirty engine clogged with grease and we have no right to expect perfect functioning from it, any more than we would from the engine.

Control of Taste in Clothes

Some women have marvelous art in choosing clothes, but there are many who might be beautiful if they would master their longing for style and colors unsuited to their type. The woman who really wants to be beautiful must realize the value of personality in clothes and choose such as will identify her as an individual.

If we were to analyze many of the great beauties we would find them quite surprisingly plain, taken feature for feature, and everyone of them has a pet sorrow which she strives to hide. It is among these professional beauties that one finds most self control, especially as pertains to eating. They know that they must keep down weight or keep up weight and that diet is a strong factor in attaining this.

If a woman expects beauty without effort or is satisfied with just a touch of it, she will not care to try out self-mastery. But if she is one of those who wish to make the most of what God has given her, she will not only attain beauty, but such loveliness as will not be lost with whitening hair. She will be beautiful because she holds the key—self control.
—Effie Maurine Paige.

Raising "Goldies"

WITH golden plumage and golden song the canary makes golden hours for many farm folk when snow lies deep and spring is yet far away. He is not a captive brought in to suffer confinement. His home is a cage and has been for centuries. This being so, you need have no qualms about keeping canaries. Indeed the raising of them is a pleasurable and profitable pastime for the housewife.

Experience the Best Guide

Books and fanciers tell how, but experience is the real teacher. Therefore, for the first season better start with but one pair of birds. Select birds whose clean plumage, non-scaly legs and liveliness proclaim their youth. It is preferable not to have both birds of a solid color; better one green, the other golden.

Be sure that one bird is a singer, or male. Some dealers are not over scrupulous when dealing with novices. The bird with a masculine look, that holds the song long and swells the throat while singing, is the male.

When trees are budding is the time to put the birds together. The cage or breeding place should be in a bright tho secluded corner of the room. The small brass cage is of no use as a breeding cage. You may procure a regular breeding cage with wire nesting frames and all, or you may wire off a small corner in the attic. If you decide on this last, then cocoanut shells, cut in two, are excellent as nest containers. In all cases glue or sew a piece of flannel within the nesting frame. Dust this flannel well with insect powder.

Horse hair or tufts of cotton are not good nesting material. The horse hair has a tendency to strangle, while the cotton seems to bed the eggs so that the mother bird can not turn them properly. Fine grasses or unraveled strings are satisfactory.

Diet in Nest-building time

Once the nest-building frenzy is at its height, keep the tray at the bottom well covered with sand or finely crushed oyster shell. Also supply green food such as apple, chickweed or lettuce. This is to prevent the mother becoming egg-bound. The yolk of a hard boiled egg, added to the diet, is also beneficial at this time. Do not be concerned if the mother canary, after a week of building, suddenly decides to pull out her work. The flannel is there as a safeguard.

From three to six eggs are laid. Some canary raisers take out on a spoon, the eggs as laid. They justify this by saying it increases the number and also causes the birdlings to hatch all on the same day, instead of one each day in the order the eggs were laid. However, the eggs are most fragile. The less they are handled and the less fuss made around the cage, the better.

The Baby Birds

The incubation period occupies thirteen days. The yolks of hard boiled eggs is the best food for baby canaries, but be sure the seed and water dishes are kept well filled. The parents are unusually fidgety at this time so beware of interference. When the youngsters leave the nest, add finely crushed cracker crumbs to the egg yolks, making the whole into a dry paste. Be sure this mixture is always fresh.

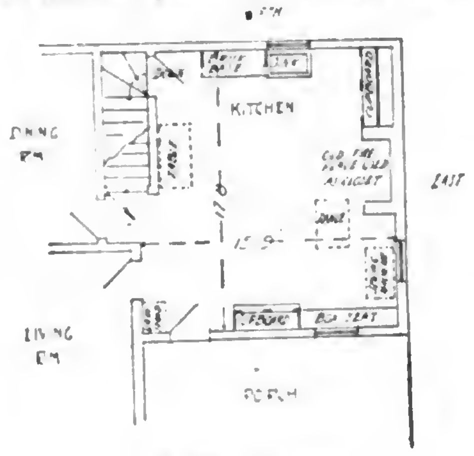
When the young birds can eat of themselves, remove them to another cage; but continue the same diet for some time. After molting their baby feathers, the young males will commence to swell their throats and after a few weeks of false notes and discordant practice will learn to sing as well as father. Each male should then be given a small cage, tho the females can be kept together. Three broodings a season are sufficient for a pair of birds. The following year use young females not previously mated and not related to your birds.
—James J. Deehan.

SQUASH PUDDING

Steam the squash until tender. Scrape from the shell. To two cups of squash add a tablespoon of butter, a tablespoon sugar, salt and pepper and three well beaten eggs. Stir together well and add three cups of milk. Bake in a slow oven in a large pudding dish or individual ramekins. Just before serving sprinkle a little nutmeg and cinnamon over the top of each.

Changes for a Large Kitchen

Dear Editor:—As a reader of Pennsylvania Farmer I would like to ask your advice about my kitchen. Can you better the arrangment of things in my plan? This kitchen is rather large, but can hardly be divided without rebuilding the cellarway at another place, or having a dark kitchen. We would like to divide a small corner off somewhere for a store room. Would also like to put a pump in the kitchen. Where would you suggest putting this?—Mrs. L. H. B.



Present plan.

In the remodeled plan you will see that a little sewing room has been partitioned off—really a combination sewing, store, and play room. A wide opening fitted with a denim curtain (not a door) connects this with the kitchen. An extra cupboard is put in this room, and a folding table, or else a folding ironing board, should be built into the end wall, between the cupboards.

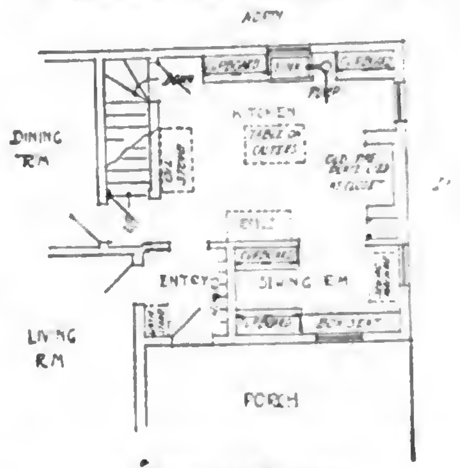
The cupboard just north of the fireplace is shifted to the north wall, leaving room to cut a new east window.

The sink remains where it was, but has a pump set at the right hand end. A new cupboard is built at the left, the drain board forming the counter shelf.

The range is shifted back against the sewing room partition. The table is fitted with casters and rolled out to the center of the kitchen, leaving space for an oil stove against the stairway wall.

The space to the left of the sewing room has been used for an entry, where the men may wash and leave hats, coats, etc. There is no door between this entry and the kitchen—merely an opening.

If possible there should be another pump in this entry, where the washstand is shown. Still better have a tank (or a large barrel) in the room over the kitchen with a force pump in entry or kitchen to fill this tank. Then run pipes to sink and washstand.—W. D. B.



Remodeled plan.

Those 1924 Potato Prices

(Continued from page 19)

be foretold with a fair degree of certainty when the per capita production was known. In those days prices and consumption were not flexible enough. No matter how large or how small the crop, fall prices were usually between about thirty-five and sixty cents in southern New York. Consumption kept on at very much the same rate every year, helped by the attitude of city groceries refusing to lower potato prices in big crop years.

After a big crop year like 1895, 1904 or 1914 prices would drop to only a few cents a bushel to the grower, with little benefit to the consumer. In years of shortage consumption went along as usual, and the following spring the price to the grower who had any left might be $1.50 per bushel. It was $4.00 per bushel after the short crops of 1916 and 1919. Shrewd growers and dealers began to believe in the rule that prices almost always went down after a big crop, and up after a short crop, no matter what the fall price.

A New Rule Now

Since 1921 the wide knowledge of government crop estimates has led to the opposite result. The short crop of 1921 was bid up so high in fall and winter that every grower saved and sold the last bushel he could. Helped by a heavy early southern crop, prices actually fell in spring. The big crop of 1922 started into consumption at a low price, consumption increased, the surplus was eaten up, and prices advanced fifty per cent in five months and held up late. This year the price has opened far below that of two years ago, with what final result we must now try to figure out.

If the course of potato prices in 1922 and 1923 for the 1922 main crop of the northern states is any guide the 1924 crop will sell far higher before next spring arrives for several reasons.

1924 Compared with 1922

First, the late main crop of the northern states is short nearly 14,000,000 bushels of the 1922 crop. While this year's yield is a little over a million bushels more than that of two years ago it came largely from different sections. The northern late crop is smaller, while the southern states and the second early states like New Jersey, Illinois and Kansas had over 15,000,000 bushels more. This production is all sold or nearly so.

Second, the increase of our population, estimated by the Bureau of Economic Research, is so great in the past two years that at least 12,000,000 bushels more are needed this year than two years ago.

Third, potato prices for carlots in the five great northern shipping sections started this fall much lower than two years ago, averaging only [illegible] five cents per 100 pounds (thir[illegible] cents a bushel).

We know from the record-breaking carlot shipments to September 1 this year, 66,042 carloads, that consumption was the heaviest up to that date, and in addition, the auto truck has a fast increasing share of the crop each year. There can be no [illegible] that consumption is still keeping up at the same rapid rate. [illegible] of reduced family storage come[illegible] [illegible] many cities that the slight [illegible]tion in carlots is more than [illegible] up.

Fourth, losses to the crop have been very heavy in several ways. The late blight and rot disease was epidemic this year over a very wide area. While not very bad in Maine, it has been the worst for years in Vermont, New York, Michigan, Wisconsin and Minnesota. Government market reports from a number of cities have noted rot in the shipments from these states.

The attack this year was peculiar, and will cause a storage loss out of proportion to the vine infection in the field. Weather in August and September was not wet enough to give a severe blight attack, and yet it was just wet enough to keep the vine infection alive, ready to infect the tubers if it got the chance. Here in New York state more than four inches of rain fell September 29 and 30, filling the soil with water. The germs were carried to the tubers, and many crops rotted badly. In many cases the dry weather which followed for six weeks kept the infected tubers from rotting at once, and millions of bushels were dug and stored without the grower being able to sort them out. They appear in the "record-breaking potato estimate," but will never appear on a consumer's table.

The saying may or may not be true that nobody loves a fat man, but it is certain that no one loves a rotten potato, nor will buy it. We must not blame the crop estimate men. They are doing the very best they can with the small means they have to work with. When even the grower cannot tell whether potatoes are infected until they have been in the cellar for weeks, we cannot blame the estimate man for not knowing about them.

Other Rot Years

Years of bad blight and rot epidemics in the past have often shown advancing potato prices even with heavy crop estimates. Our per capita production in 1912 was the second heaviest on record, 4.43 bushels. Losses in storage were so heavy that by April prices at New York city were sixteen per cent over the October price.

Finally, the low price in fall, twenty-five to thirty-five cents per bushel to the grower over much of the East, and as low as thirty cents per 100 pounds in important western regions, forced farmers to use their small supply of high priced labor in saving first the crops more valuable than potatoes.

[illegible] in New York and in Pennsylvania many growers have silos for their dairies. Corn was so backward this cool season that many dairymen delayed silo filling to allow their corn time to get more feeding value. This made potato digging late, and when a severe cold wave swept over the East the middle of November it caught many fields with digging unfinished, and froze many potatoes temporarily stored on barn floors for immediate sale.

What Are the Future Price Factors?

Two years ago, in a period of hard times, prices of potatoes went up fifty per cent from November to April first. What will be the effect on prices in this prosperous year of the shortage of 14,000,000 bushels in the main crop states, the need of 12,000,000 bushels for the increased population, the increased consumption, and the very heavy losses by rot and freezing?

Here in New York we saw the onion market start off dull at around sixty cents a bushel this year, with dealers talking lower prices. Already onions have nearly doubled in price to the grower.

If carloads of potatoes in the northern shipping sections sold at an average of $1.27 per 100 pounds by April 1 two years ago, what will they do by next March, April and May with the supply now left so much smaller than that of two years ago?—Daniel Dean, Tioga Co., N. Y.

Sweeney Trains Men To Make Big Money!

You've long wanted to come to this Million Dollar School, *the World's Largest Automotive and Electrical School* at Kansas City, Mo. NOW IT WILL BE EASY, because of my big reduction in cost of tuition. I've raised the salaries of thousands of other fellows—I can do it for you, and if you decide now to come here, spend a few weeks in actual "Learn by Doing" training, there's a good job paying big money ready for you or a chance to go into business for yourself. But, you'll have to decide NOW to be sure of the big saving in cost of training.

Auto Mechanics $50 Week and Up

Learn a Good Trade

One that will pay you $200 to $500 a month and more. Get in the biggest business in the world—the Automotive Business. I want to prove that you can do what thousands of men just in your position have done as a result of "SWEENEY TRAINING." I say, take up the AUTO BUSINESS NOW. Learn it at SWEENEY'S, *Kansas City, Mo.* Act now while you can get the big saving in tuition.

Get the Best for Less Money

The SWEENEY AUTO SCHOOL offers you the greatest opportunity you ever had. A big reduction in tuition—a Million Dollar building—10 stories high—over 12 acres of floor space devoted to the *"Sweeney System of Practical Instruction"* under expert instructors. Just across the plaza from the Union Station—a short distance from the beautiful new Two Million Dollar Memorial Building.

BUT, REMEMBER THERE'S ONLY ONE SWEENEY AUTO SCHOOL — THERE'S ONLY ONE SWEENEY SYSTEM and you can only get this system at Kansas City, Mo. You positively cannot get it anywhere else.

And Now Cuts The Tuition 1/2 So You Can Start Your Training At Once

There's Only One Sweeney School It's at Kansas City, Mo.

COME RIGHT NOW. This is the most amazing offer I ever made. If you are mechanically inclined you will learn under the "Sweeney System," by actually doing the work, everything about all kinds of automobiles, oxy-acetylene welding, vulcanizing, battery work, electrical work, building and repairing Radio sets. No experience or education needed. No books are used. You work on most complete gas engine and electrical equipment in any school in the world. Over $200,000 invested. $50,000 Radio Station WHB. You'll get dirty and greasy, but you'll learn by the "Sweeney System" that fits you for the big pay jobs at $50 a week and up, waiting for Sweeney trained men.

Sweeney System OF PRACTICAL INSTRUCTION

There's only one place where you can get this training—it's at the world-famous Sweeney Automotive and Electrical School of Kansas City. There's only one Sweeney School—the largest in the world. There's only one "Sweeney System." No other school offers or can give you this training that not only trains you to fill big paying jobs, but saves you time and money. This training is making big money for 60,000 Sweeney Graduates. I estimate 20,000 of them own a good paying business.

Battery Experts $200 Month and Up.

My Free Book Tells You

How to get a good mechanical job.
How to be a chauffeur or truck driver.
How to repair any make of car.
How to make batteries and auto tires.
How to weld.
How to run a garage anywhere.
Shows you hundreds of actual photographs of men at work in my big shops.
Shows how 60,000 men got their start.
Shows how easy it is to learn several good trades; how much fun you have during recreation hours. Swimming pool, entertainment, band and orchestra, radio broadcasting Station WHB.
Answers every question.

WRITE ME TODAY or wire me when you'll be here. Don't wait. Come right now. Sweeney trained men in demand everywhere. $200 to $500 a month and more. You must decide now if you want to be sure of getting the big reduction in tuition. Write for my Big FREE 64-page book or wire me you are coming. No colored students accepted.
E. J. SWEENEY, Pres.

COUNTY NEWS AND COMMENT

ALLEGHENY COUNTY, PA.—Fine winter weather. About four inches of snow, and a very cloudy sky. As this is a dairy section the farmer finds plenty of work to occupy his time. Rough feed for cattle plentiful. Grain feeds high. Ninety-eight per cent of the herds being well cared for.—C. K., Jan. 12.

ARMSTRONG COUNTY, PA.—A continuous snow covering the grain since December 15. The original snow about eight to ten inches in depth. Last night there came a fall of six inches more, and all vegetation is well blanketed. Most beef cattle sent to the shambles. Hog lots, likewise emptied, while brood sows are more scarce than ever before. Prices have not materially advanced while feed is excessively high. Dairy products low, notwithstanding the high cost of production. Poultry abundant and cheap, while eggs are scarce and low in price, the best bringing from 40@50c per dozen. Most bituminous coal mines are being operated. Plate glass plants are operating on a practically normal basis as is the aluminum plant. The brick yards, however, are running on a restricted output. Conditions ideal for harvesting ice. Wheat bringing a good price now. Apples about cleaned up. Good, clean fruit of standard varieties brought $1.50@2 per bu. The retailer sold at 5c each, 15c a lb., or $1.25 a peck. Petty thieving and local hold-ups common. Radio enthusiasts plentiful with about twenty-five per cent of rural homes equipped with two, three or five-tube sets.—W. M. P., Jan. 13.

CARBON COUNTY, PA.—A clear day ushered in the New Year, but on January 2 there was an unusual snow storm that lasted about eighteen hours, and from twenty to twenty-four inches of snow fell. A short drizzle of rain and sleet formed a hard crust and thus prevented the snow being blown into drifts. Auto traffic was at a standstill and farmers resorted to horses and bobsleds to open the roads. Ice houses are being filled, ice ten to fourteen inches thick and very plentiful. Butter 50c; eggs, 68c; chickens, 25c; hogs, dressed, 15½c; potatoes, 90c.—L. E. B., Jan. 13.

CHAUTAUQUA COUNTY, N. Y.—Chautauqua is holding her own in the way of zero weather. One night last week the thermometer registered twenty-two below. The work of the day is cutting wood; farmers are busy keeping the home fires burning. Eggs, 48c; butter, 40c; potatoes, 75c@$1 bu., and rising somewhat, probably due to the extreme cold. Sledding is good and considerable timber is being hauled. Loads of logs are becoming almost as common as automobiles were a few weeks ago. Corn was higher than for sometime. The dairyman said last week he couldn't sell an ounce of butter because everyone else who has cows is making butter, too. Milk so cheap the farmers are not interested in selling it, so they use up all they can. Here in town this winter the price is still 8c qt.—E. M. A., Jan. 11.

INDIANA COUNTY, PA.—Winter here now, not terribly cold, but some real snow. Snow plows have been busy keeping highways cleared but township roads this morning were difficult to go thru. The past week has been a delightful time to get work done, many farmers took advantage of the snow for sledding and cleaned out their barns and replenished their coal supply. Hunting season passed rather quietly here. Rabbits and squirrels scarce. Hay very hard to sell at a reasonable price, fruits and potatoes mostly all sold out. Eggs now on the decline, have been selling for 75c and are now down as low as 50c. Turkeys sold very well this year both at Thanksgiving and Christmas, bringing from 45@55c per pound live weight, which was above Pittsburgh price. Chickens low, however. Pigs somewhat scarce all winter and seem now to have gone up a little. People and also livestock are all standing the winter fine. One man I heard lost a cow from eating nails but I guess nails will kill 'em no matter what county they are from.—H. A. N., Jan. 13.

LACKAWANNA COUNTY, PA.—Several days of foggy weather during the middle of December, followed by springlike weather that turned to cold. Temperature dropped to zero. Passing thru a blizzard at present. Farmers threshing, cutting wood, and hauling and storing ice. Some hauling props and ties to the mines. Mumps, whooping cough and several cases of typhoid fever reported. Beef by the side is selling for 14c lb., wholesale, that is the best grade, old beef, 8c; light pork, 18c; lard, 22c; butter, 42@50c; eggs, 85c@$1; oats, 80c bu., ground oats, $2.60 cwt.; meal, $2.85 cwt.; buckwheat flour, $1.50 per 25-lb sack.—E. A. K., Jan 13.

LEBANON COUNTY, PA.—We are having real winter weather. Three or four light snows have fallen on top of the "great snow." The deep snow of the second measured from twenty-five to thirty-six inches at various points in the county. Our organized threshermen met on the tenth in Room 4 Court House. A speaker from Harrisburg addressed meeting on bill which are listed for passage during the present session of our state legislature. The threshermen voted against compulsory insurance for owners of automobiles. J. C. Kremer, of Sellersville, Pa., judged the poultry at the Seventeenth Great Annual Poultry and Pigeon Show at Lebanon this week. The Wyandotte convention of America was held at the same time and $400 was given in prizes in addition to the blue ribbons. Our County Agent Berger, in addresses and thru the public press is urging farmers to keep accounts of their business. Two of our winners in the Ton Litter Club were on hand at the meeting of winners and the presenting of the medals. There is much complaint among poultrymen at the low number of eggs gathered this winter. Very many will cut their flocks in half for next winter.—R. I. W., Jan. 15.

McKEAN COUNTY, PA.—Until the past few days we have had some real winter weather; several times the mercury went below zero. We have about five inches of snow on the level. Most farm work now consists of doing chores and getting fuel, many farmers now use a buzz saw to cut wood, a real time saver. The farm census taker has been calling on the farmers. In many cases it takes him a long time at a place, owing to the fact that they had no system of farm bookkeeping. Cattle seems to be wintering well, dairy farmers have very little money left from sale of milk and cream after feed bills are paid. Several cows have been sold in the county in the past three months. Eggs continue to be scarce and high, 70c doz.; potatoes, 75c; oats, 60c; hogs, 14c pound, dressed.—F. J. H., Jan. 7.

MIFFLIN COUNTY, PA. — Real winter weather with enough snow for sledding. Not much change in the way of work among the farmers, still some butchering of hogs and beeves. Some farmers chopping wood and hauling to town, a few others cutting locusts and hauling to the mill for telephone and electric wiring purposes. The stock dealers shipped a load of cows and other stock to Lancaster County on Monday. Feed dealers received a carload of corn last week which they are selling at $1.65 bu. Some farmers must buy on account of the poor crop last fall. A few public sales already. Prices paid by dealers: wheat, $1.60; corn, 1.10; oats, 60c; potatoes, 70c; apples, 1.25; butter, 40c; eggs, 55c; lard, 18c; chickens, 20c.—J. H. B., Jan. 15.

PERRY COUNTY, PA.—The past month has been real old fashioned winter weather, steady cold and a goodly amount of snow. Most of the ice is up. The nicest ice for many a year was put up this year. Many of us never saw nicer ice. Farmers busy tending their stock and getting in wood, finishing butchering, etc. Very little else can be done on account of the cold and snow. The winter wheat has a fine blanket of snow that covers entire fields. The schools are in full swing, holding plays, entertainments, teachers' local institutes and other important school meetings thruout the county. Most prices of farm products are fairly satisfactory to the farmer now. Prices: wheat, $1.75; oats, 65c; corn, $1.65; bran, $2.35; cottonseed, $53; oil meal, $57; potatoes, $1; veal, 13c; eggs, 51c; hogs, live, 10c; dressed, 14c; milk, League price, $2.67 for four per cent; chickens, 19@25c. We have heard of no poultry plague in the county to date. The mumps are visiting some of the children and spoiling the percentage of attendance in some schools this month.—J. L. B., Jan. 13.

SNYDER COUNTY, PA.—A foot deep snow has covered the earth for a week; with late, warm, melting weather replenishing in some measure the scant water supply. Many farmers haul water from streams for stock. Zero weather has brought all farm operations to a standstill, save gathering firewood, filling ice houses, etc. Ice almost a foot thick. Snow plows cleaning up state highways. Not much travel by auto. Some few sleighs and bells enliven the traffic. Cut fire wood stove length is being offered at $10 per truck load of one ton. This is as cheap as the farmer can gather it from his wood lot and have it cut by professional sawyers. Eggs, 60c; wheat, $1.60; oats, 65c; corn, $1.25. Turkeys and poultry sold out at good prices. Some corn remains unhusked.—W. K. M., Jan. 9.

TIOGA COUNTY, PA.—Snow has covered the ground since before Christmas but there has not been enough to make sleighing. Cars running everywhere. Weather cold but not at all severe as there has been very little wind. There was not sufficient rainfall during the fall and one hears many complaints of water shortage. Farm work at a standstill. Farmers taking advantage of slack time to cut wood and logs, grind feed, make repairs, etc. Quite a few drawing coal, working on small lumber jobs, etc. One of the best attended meetings of the Dairymen's League Co-operative Association, Inc., ever held in the county, was held at Lawrenceville, January 7. Some prices are, eggs, 50@52c; butter, 50c; veals, 10@12c; dressed pork, 15c; potatoes, 35c; chickens, 18@20c; beef by quarter, 7@9c.—P. W. T., Jan. 12.

Feed Prices

THE quotations are for transit and nearby shipments, Thursday, January 15, 1925, according to the Pennsylvania Bureau of Markets, and the United States Bureau of Agricultural Economics co-operating. The following quotations show the approximate cost of feed per ton (all in 100-lb. sacks) and grain per bushel in carlots, sight draft basis, delivered on track at Philadelphia and Scranton rate points.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York-Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury-Bridgeton rate points, add $1.00 per ton; for Freehold-Toms River-Cape May points add $1.40 per ton.

Coarse spring bran ..	$37.00@37.50
Pure spring bran....	37.50@39.00
Soft w. w. bran......	38.50@39.50
Hard w. w. bran	38.00@38.50
Standard middlings ..	41.00@42.00
Soft w. w. middlings..	47.00
Flour middlings	45.00@46.50
Red dog flour	48.50@49.50
White hominy	54.00
Yellow hominy	52.00
Gluten feed	46.90
36% cottonseed meal.	42.50
41% cottonseed meal.	45.50
43% cottonseed meal.	47.50
34% linseed meal....	50.20

Feed markets dull, trading in deferred deliveries particularly light. Interior dealers report light sales as result of increased tendency to feed more hay and cheaper feeds. Production of oil meal in excess of demand, with resellers shading prices to effect sales. Hominy feed firm, offerings and demand light. Fair stock of gluten feed and transit gluten still quoted at $1.00 less than January shipments. Some pressure to sell stored bran, but middlings sold firm.—W. R. W.

T.B., Beetles, Moths, etc.

(Continued form page 3)

The control of the borer in sections now infested may be accomplished by proper cultural methods and the observance of simple precautions.

During the coming session of the Legislature it will be decided whether or not the Big Four—tuberculosis, the beetle, the moth and the borer—are to be permitted to spread death and destruction over an increasingly large area during the next two years.

The scientists of the Bureau of Animal Industry and the Bureau of Plant Industry prepared their cost estimates only after they had surveyed carefully the work that needs to be done. They have pared their budgets to the limit; there is no economy in further paring.

BUY HUBER'S RELIABLE CHICKS

OHIO ACCREDITED CHICKS

Ohio Accredited chicks means every bird in our breeding flocks selected and leg banded by experts trained and authorized by Poultry Dept. Ohio State University. Culled for egg production and quality. Give us your order for our reliable chicks and we will prove to you that if better chicks could be hatched for the money we would be hatching them.

Fine Illustrated Catalog Free. Tells how we produce reliable chicks that have pleased thousands of customers. We hatch 13 varieties. Combination offers. Valuable book given free with each order. 100% live delivery. Our sixteenth year.

Swiss Weather Prophet

A Weather Warning That is Dependable

The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.

Scientific and Accurate

This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

Changing the Barn

MR. BASHORE writes in the January third issue about fighting the firebug and tells of many barn fires in Berks County. This reminds the farmers of Chester County of what they experienced two years ago when three or four barns were burned nearly every week.

Mr. Bashore's ideas on building separately for each class of livestock and machinery, instead of having a bank barn with cattle underneath, are good, but some of us still have well built bank barns.

Most barns in this section were built in the early part of the last century and few are less than 100 years old. At that time they were built to suit the need of the farm. Livestock was sheltered underneath and the machinery on the barn floor, and wagons and carts under a large overshoot or straw house. But today changed conditions in farming necessitate much more machinery and about twice the livestock is kept, so that now we find on many farms a great many sheds for wagons and machines.

Changes Made in Bank Barn

My cow stable is one story high and is attached to the barn, yet is communicating. I built the horse stable on the other side of the barn in the same manner and turned the old cow stables in the original barn into box stalls for cows, fodder bin, a large potato bin, also apple storage and feed storing and mixing floors.

In making these changes I was not getting ready for a fire, but cattle are much better off in a well lighted stable and with this arrangement we can get around to work with them and secure better ventilation, easier access to silo and manure pit.

I needed storage for potatoes and apples, so instead of building the potato and apple building I changed the stables and have never had a frosted potato or frozen water pipe. This change was made eleven years ago.—H. D. R., Chester County, Pa.

Lack of Self Control

THERE is a phase of the day's news that calls attention to an unnatural and appalling matter—the suicide and attempted suicide committed by mere children.

A boy of fifteen kills himself because he is reprimanded for drinking; a girl takes her life because she is scolded for keeping late hours.

For such absurd reasons youth is seeking death when life is most attractive. The real cause, lack of training, is apparent to the casual observer.

In many homes there are no lessons in self-control. Children are allowed to "have tantrums"—to shout and scream and stamp because some trivial desire is denied them, causing discomfort and annoyance to every one present.

If one never learns to control self he will not be able to control others or to control events. The pendulum swings too far.

Perhaps in many old-fashioned homes child nature was unduly repressed, but the system had its advantages. It is well for the young to have definite tasks to perform and rules of living to observe. The child that loses sleep eats at irregular intervals, hears quarreling and faultfinding in the home, develops "nerves."

Life has no definite goal and today's grievance looms large. Often neighborhood environment,—the influence of playmates or of unwholesome literature or photoplays,—is responsible for the tendency to do rash, impulsive things, but even these may be censored by a wise parent.

Where the home is a real home, instead of a place to eat and sleep, where children are taught the meaning and value of life, the worth of self-control, the joy of service and attainment, the T. N. T. brand of nervousness seldom develops.

The farm seldom sends out high-tensioned irresponsible youth. Contact with nature makes for serenity. The religious education advocated by some may be the answer to the problem but old-time American ideals upheld in the homes would help mightily.—M. C. S., Potter County, Pa.

Not Overworked

A COUNTRY boy had a Christmas greeting from a summer playmate, who lives in Brooklyn: "Merry Christmas. Did you feed your pigs?"

The country boy had been given the job of tending the porkers without his applying for the job. Dad did not realize that he had picked on a busy man, who could not fit mere pigs into his crowded daily schedule. For example, the trout stream might flow uphill, if the boy did not give it frequent inspection.

After breakfast Big Sister would sing out: "Here, you kid, feed your pigs. I want this pail. Pronto!"

After dinner, Father relaxing a bit for a pipeful, "Bill, have you fed your pigs? I'd think you'd sometimes do a job that comes three times a day without being told."

And Mother, Too!

After supper, Mother, gently aside: "Sonny, why don't you feed your pigs? Please, don't wait until your told." Mother's admonition seemed a trifle confused. Probably her emotions were, too.

The city lad watching and listening ventured at last: "Your pigs! Are they really Bill's pigs."

The mother, who has a theory that boys will be better men if they are not brought up as objects of their parents' charity, answered: "He'll get a generous share of the sausage. They are his contribution to the family expense."

I have given you this observation as one of many that has led me to conclude that children seldom hurt themselves with work. I hope the states will be wise enough not to adopt the proposed child labor amendment. The states can and will take care of their children. No section has a corner on the belief in education. The solutions will vary widely because conditions are so utterly unlike. A sparsely settled, agricultural state does not need New York's extreme laws.

Let Each State Do It

I agree heartily with a level-headed farmer: "Let each state pass her compulsory school law. When children are not in school, they should do any useful work available."

If the amendment is not ratified there will be much grief among social welfare workers. Some possible jobs may fail to materialize. But for their own comfort they might embark in the wholesome enterprise of bringing up a half dozen or more children. They would have a chance to do a little child study without field glasses.—Nora Del Smith Gumble, Pike County, Pa.

The Light in the Clearing

(Continued from page 20)

wealth accumulates and the cities grow. I am for the average man—like myself. They've lifted me out of the crowd to an elevation which I do not deserve. I have more reputation than I dare promise to keep. It frightens me. I am like a child clinging to its father's hand in a place of peril. So I cling to the crowd. It is my father. I know its needs and wrongs and troubles. I had other things to do tonight. There were people who wished to discuss their political plans and ambitions with me. But I thought I would rather go with you and learn about your troubles. What are they?"

MY UNCLE told him about the note and the visit of Mr. Grimshaw and of his threats and upbraidings.

"Did he say that in Bart's hearing?" asked the Senator.

"Ayes!—right out plain."

"Too bad! I'm going to tell you frankly, Baynes, that the best thing I know about you is your conduct toward this boy. I like it. The next best thing is the fact that you signed the note. It was bad business but it was good Christian conduct to help your friend. Don't regret it. You were poor and of an age when the boy's pranks were troublesome to both of you, but you took him in. I'll lend you the interest and try to get another holder for the mortgage on one condition. You must let me attend to Bart's schooling. I want to be the boss about that. We have a great schoolmaster in Canton and when Bart is a little older I want him to go there to school. I'll try to find him a place where he can work for his board."

"We'll miss Bart but we'll be tickled to death—there's no two ways about that," said Uncle Peabody.

I had been getting sleepy, but this woke me up. I no longer heard the monotonous creak of harness and whiffletrees and the rumble of wheels; I saw no longer the stars and the darkness of the night. My mind had scampered off into the future. I was playing with Sally or with the boys in the school yard.

The Senator tested my arithmetic and grammar and geography as we rode along in the darkness and said by and by:

"You'll have to work hard, Bart. You'll have to take your book into the field as I did. After every row of corn I learned a rule of syntax or arithmetic or a fact in geography while I rested, and my thought and memory took hold of it as I plied the hoe. I don't want you to stop the reading, but from now on you must spend half of every evening on your lessons."

We got home at half past eight and found my aunt greatly worried. She had done the chores and been standing in her hood and shawl on the porch listening for the sound of the wagon. She had kept our suppers warm but I was the only hungry one.

AS I was going to bed the Senator called me to him and said.

"I shall be gone when you are up in the morning. It may be a long time before I see you; I shall leave something for you in a sealed envelope with your name on it. You are not to open the envelope until you go away to school. I know how you will feel that first day. When night falls you will think of your aunt and uncle and be very lonely. When you go to your room for the night I want you to sit down all by yourself and open the envelope and read what I shall write. They will be, I think, the most impressive words ever written. You will think them over but you will not understand them for a long time. Ask every wise man you meet to explain them to you, for all your happiness will depend upon your understanding of these few words in the envelope."

In the morning Aunt Deel put it in my hands.

"I wonder what in the world he wrote there—ayes!" said she. "We must keep it careful—ayes!—I'll put it in my trunk an' give it to ye when ye go to Canton to school."

"Has Mr. Wright gone?" I asked rather sadly.

"Ayes! Land o' mercy! He went away long before daylight with a lot o' jerked meat in a pack basket—ayes! Yer uncle is goin' down to the village to see 'bout the mortgage this afternoon, ayes!"

It was Saturday and I spent its hours cording wood in the shed, pausing now and then for a look into my grammar. It was a happy day, for the growing cords expressed in a satisfactory manner my new sense of obligation to those I loved. Imaginary conversations came into my brain as I worked and were rehearsed in whispers.

"Why, Bart, you're a grand worker," my uncle would say in my fancy. "You're as good as a hired man."

"Oh, that's nothing," I would answer modestly. "I want to be useful so you won't be sorry you took me and I'm going to study just as Mr. Wright did and be a great man if I can and help the poor people. I'm going to be a better scholar than Sally Dunkelberg, too."

What a day it was!—the first of many like it. I never think of those days without saying to myself: "What a God's blessing a man like Silas Wright can be in the community in which his heart and soul are as an open book!"

AS THE evening came on I took a long look at my cords. The shed was nearly half full of them. Four rules of syntax, also, had been carefully stored away in my brain. I said them over as I hurried down into the pasture with old Shep and brought in the cows. I got thru milking just as Uncle Peabody came. I saw with joy that his face was cheerful.

"Yip!" he shouted as he stopped his team at the barn door where Aunt Deel and I were standing. "We ain't got much to worry about now. I've got the interest money right here in my pocket."

We unhitched and went in to supper. I was hoping that Aunt Deel would speak of my work but she seemed not to think of it.

"Had a grand day!" said Uncle Peabody, as he sat down at the table and began to tell what Mr. Wright and Mr. Dunkelberg had said to him.

I, too, had had a grand day and probably my elation was greater than his. I tarried at the looking-glass hoping that Aunt Deel would give me a chance modestly to show my uncle what I had done. But the talk about interest and mortgages continued. I went to my uncle and tried to whisper in his ear a hint that he had better go and look into the woodshed. He stopped me before I had begun by saying:

"Don't bother me now, Bub. I'll get that candy for ye the next time I go to the village."

Candy! I was thinking of no such trivial matter as candy. He couldn't know how the idea shocked me in the exalted state of mind into which I had risen. He didn't know then of the spiritual change in me and how generous and great I was feeling and how sublime and beautiful was the new way in which I had set my feet.

I went out on the porch and stood looking down with a sad countenance. Aunt Deel followed me.

(Continued on page 32)

Decide right *Now* to make 1925 the Turning Point in your Milk Business

THERE are thousands of dairymen and farmers all over the country who look back at the day they put in their Empire Milkers as the beginning of a *new deal* for them.

They are making big profits out of milk instead of small profits. Many are making money where they could only break even, or even worse, before.

They have gotten away from hand milking. That's part of it—but *only part*. The rest is they invested in the one milking machine that is different from all others—the Empire.

Different in action—different in *results*. The milker that milks in Nature's way—by alternately sucking and massaging the teat completely from *tip to udder*. The cow likes to be milked by the Empire—stands quieter, stays in better condition, gives more milk and gives it longer.

Decide right *now* that you are through with hand milking—through with drudgery—through paying three men to do what one man can do better—through with poorly conditioned cows and small yield because of the trouble with hired help that not only does not know how to milk properly but is not willing to go to the trouble—through with high bacteria counts.

Even if you only milk six cows—you can benefit by the Empire—for the new Empire Electric Milker makes it economically possible. It is both inexpensive to install and cheap to operate.

Look into this thoroughly now—and make up your mind. Talk to the Empire agent. Send for the free Empire catalog.

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units may be used with Empire Electric Pumping Outfits—a practical size for *every* dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The Simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for a single or double unit.
7. Low power cost. ¼ H. P. Motor operates 4 double units, milking 8 cows at a time.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.

The Light in the Clearing

(Continued from page 31)

"W'y, Bart!" she exclaimed, "you're too tired to eat—ayes! Be ye sick?"

I shook my head.

"Peabody," she called, "this boy has worked like a beaver ever minute since you left—ayes he has! I never seen anything to beat it—never! I want you to come right out into the wood-shed an' see what he's done—this minute—ayes!"

I followed them into the shed.

"W'y of all things!" my uncle exclaimed. "He's worked like a nailer, ain't he?"

There were tears in his eyes when he took my hand in his rough palm and squeezed it and said:

"Sometimes I wish ye was little ag'in so I could take ye up in my arms an' kiss ye just as I used to. Horace Dunkelberg says that you're the best-lookin' boy he ever see."

"Stop!" Aunt Deel exclaimed with a playful tap on his shoulder. "W'y! ye mustn't go on like that."

"I'm tellin' just what he said," my uncle answered.

"I guess he only meant that Bart looked clean an' decent—that's all—ayes! He didn't mean that Bart was purty. Land sakes!—no."

I observed the note of warning in the look she gave my uncle.

"No, I suppose not," he answered, as he turned away with a smile and brushed one of his eyes with a rough finger.

I repeated the rules I had learned as we went to the table.

"I'm goin' to be like Silas Wright if I can," I added.

"That's the idee!" said Uncle Peabody. "You keep on as you've started an' everybody'll milk into your pail."

I kept on—not with the vigor of that first day with its new inspiration—but with growing strength and effectiveness. Nights and mornings and Saturdays I worked with a will and my book in my pocket or at the side of the field and was, I know, a help of some value on the farm. My scholarship improved rapidly and that year I went about as far as I could hope to go in the little school at Leonard's Corners.

"I wouldn't wonder if o' Kate was right about our boy," said Aunt Deel one day when she saw me with my book in the field.

(To be continued next week)

Strength is success. Strength to be, strength to do, strength to love, strength to live. It is not happiness. It is not amusement, it is not content; these will come but they are not the object.—Edward Everett Hale.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also name and address of writer. Initials only will be published. We cannot make replies by mail. This is one of the most valuable features of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical compendiums a farmer stockman can obtain.

PSEUDO-LUXATIONS OF THE PATELLA.—What can be done for horse that has cramps in both hind legs?—W. C. M., Greenville, Pa. I take it that the stifle bone slips out of place but not entirely. If you will apply equal parts turpentine, aqua ammonia, raw linseed oil to stifle joints daily this will correct the trouble. Give the horse regular exercise.

SPLINT.—My fourteen-year-old horse shows some lameness when first taken out of barn, but after he has gone a mile or two seems to travel sound. He is lame in left front leg.—J. S. G., Kane, Pa. His ailment is soreness, not a weakness. Examine shin, a splint may be forming. If so, paint bunch with tincture of iodine three or four times a week. If kept quiet he might recover without treatment.

ABSCESS.—The hind leg of horse swelled and some time later opened at fetlock joint, now there is large sore which I have been unable to heal.—A. S. H., Greenwich, N. J. Apply equal parts oxide of zinc and boric acid to sore twice a day. Apply hydrogen peroxide to remove pus, this is better than using so much water.

THUMPS.—I have a race horse and whenever raced he gets the thumps. Can he be cured?—H. G. B., Gratz, Pa. Spasm of the diaphragm, or thumps, is a spasmodic contraction of the diaphragm, the principal muscle used in respiration, and is generally occasioned by extreme and prolonged speeding on the race track or road. Doubtless your horse should be used for slow work, as severe exertion is almost certain to make him worse. Don't exert him much when the stomach is full.

PINWORMS—INFECTED UDDER.—My horse passes some very small worms. I turned a cow loose in my herd a few days ago. She had a small sore on one teat and in a few days the other cows had many sores on their udders.—C. C. W., Kittanning, Pa. Dissolve one-quarter pound of common salt in one gallon of tepid water, then after the rectum has been washed out with soap and water, apply the solution of salt. Dissolve two ounces of hyposulphite of soda in six quarts of tepid water and wash sore udders three times a day.

SORE FEET.—SORE MOUTH.—Two of my cows are troubled with sore feet. They have dry yard to walk in and stand on cement floor. I applied muriatic acid and it seemed to help them at first. Will bedding them with sawdust cause it? Considerable saliva drops from the mouth of my three-year-old cow and I am unable to tell what causes it.—H. H. D., Honesdale, Pa. A variety of causes may produce inflammation of the foot between the claws or toes. Apply compound solution of cresol, at first full strength, later it may be diluted. The feet must be kept clean and dry. Dissolve one-quarter pound borax in one gallon of water, wash out mouth three times a day. You should examine the mouth closely, there is perhaps some foreign body lodged between the teeth causing all the trouble.

SHY BREEDER.—Heifer came fresh first time in July, 1923. I bred her in November the first time she came in heat. In August, 1924, she came in heat and was bred, in December she came in heat again. So far as I know she has not had a miscarriage.—B. F., Smiths Ferry, Pa. If she comes in heat regularly, continue breeding her and she will perhaps get with calf.

CHRONIC COUGH.—About a month ago I bought a cow which was shipped here and she has coughed more or less since I got her. The cows shipped are supposed to have been tuberculin tested.—J. A. M., Malvern, Pa. Cough depends upon a reflex nervous action and may be primary when irritation exists in the lungs or air passages, or secondary when caused by irritation of the stomach, intestines or other parts having nervous communications with the respiratory apparatus. A cough is said to be dry, moist, harsh, hollow, difficult, paroxysmal, suppressed, sympathetic, etc., according to its character, and of course is a very important symptom. Unless you are fairly certain that she was tuberculin tested by a competent veterinarian and failed to react, have her tested; then the veterinarian can tell you what is causing the cough.

Solving the Bad Weather Problem

FARMING is easier in winter months when your feet are comfortably protected against wet and cold.

It is Firestone's job to make winter farming easier with comfortable foot protection. Wise farmers know they can depend upon Firestone Rubber Footwear for dry feet, comfort and warmth.

Firestone Rubber Footwear affords more than ample protection in the worst weather. The quality and feel of the rubber, the smooth finish inside and out, the special reinforcements at points where most needed, are instant proofs (on sight) of the longer service and greater satisfaction of this footwear.

Firestone Rubber Footwear, notably the "Rancher" here illustrated, is a valuable contribution to better farming conditions and hundreds of thousands of farmers appreciate this fact. Demand Firestone when YOU buy rubber footwear.

Children's Musterole-Mild

Of course, you know good old Musterole; how quickly, how easily it relieves rheumatic and neuralgic pain, sore joints and muscles, stiff neck and lumbago.

We now want you to know CHILDREN'S MUSTEROLE, made especially for use on infants and small children.

CHILDREN'S MUSTEROLE is just good old Musterole in milder form. Unexcelled for the relief of croupy coughs and colds; it penetrates, soothes and relieves without the blister of the old-fashioned mustard plaster.

Keep a little white jar of Children's Musterole handy. It comes ready to apply instantly, without fuss or bother. The price is so small—35c a jar—no mother can afford to be without it.

The Musterole Co., Cleveland, Ohio

BETTER THAN A MUSTARD PLASTER

Leading Fruit Growers Use the "Acme" Harrow

THEY find that it keeps groves and orchards in perfect condition with least outlay of time and effort. The sharp Coulters cut the weeds and leave a thick, loose mulch of earth. With "Acme" orchard models, you can work close to the trees, even where branches are low.

You will find the "Acme" equally useful in the truck fields. It makes perfect seed beds in less time than any other tool.

Write for booklet, "*Bigger Crops from Better Tillage.*" Ask your dealer about the "Acme".

Nodule Bacteria for Legumes

How to Prepare Cultures for Seed Inoculation

By J. G. Lipman
Staff Contributor and Adviser

Winter before last I heard a lady talking at the alfalfa meeting in Trenton about inoculation of alfalfa seed. We prefer the commercial culture to the soil method but do not see why we cannot make our own with agar or gelatin and the nodules in the roots from an old alfalfa field. Please give us any information you can about the making of such a culture to inoculate alfalfa seed.—J. L. C., Salem County, N. J.

It might be well, by way of introduction to this subject, to review certain of the outstanding developments in the study of soil inoculation and to describe the present status of the subject.

It became definitely known in 1886 that clovers and other legumes have the ability to enrich the soil in nitrogen because of their association with certain bacteria. These bacteria enter the roots of such plants and form the well-known nodules.

Farm Show Winners

WE ARE publishing this week as many of the Pennsylvania Farm Products Show awards as are available up to the time of closing the forms for this issue. They will be found as follows:

Dairy products awards...	Page 11
Egg awards	" 13
Tobacco awards	" 11
Wool awards	" 11
Judging contest winners.	" 9

Winners in the corn exhibition at the New Jersey Farm Products Show will be found on page 8.

Nodules are, in a sense, nitrogen factories where the bacteria multiply to very large numbers and, in the course of their activity, they make use of the nitrogen of the air, which in turn becomes available to the crop with which the bacteria are associated.

Vaccinating Alfalfa Roots

When this fact was revealed in 1886 botanists and bacteriologists at once attemped to grow pure cultures of these organisms. This was successfully done in 1888-1889. The pure cultures so obtained from nodules were used experimentally in developing nodules. This method employed was much like that used in vaccination. A very minute quantity of the pure cultures was transferred with a platinum needle on the root of a legume and, where the root was thus scratched and the bacteria introduced, a typical nodule developed.

The principle on which the artificial culture of nodule bacteria is based is a simple one. Bacteriologists who attempt to prepare such pure cultures start with nodules which they take from clover or other legume plant cultures of whose bacteria are desired. These nodules are carefully rinsed in sterile water; then are immersed for about a minute in a solution of corrosive sublimate; washed again in sterile water; dipped in strong alcohol; rinsed off again in sterile water and cut open with a sterile knife.

Food for the Bacteria

The contents of the nodules are then squeezed into a culture solution, which may vary in composition more or less depending on the preference of the bacteriologist.

The following named materials, in the proportions given, may be used for the preparation of a satisfactory culture solution for nodule bacteria:

- 1 quart boiled or distilled water
- 1-3 ounce cane or beet sugar
- 1-28 ounce monobasic potassium phosphate
- 1-200 ounce magnesium sulphate
- 1-200 ounce ammonium nitrate

After the contents of a few nodules are squeezed into this solution (or culture medium, as the bacteriologist would call it) the liquid is allowed to stand in a dark and warm place for about two days. During that time the nodule bacteria will have multiplied in the culture solution to enormous numbers. This culture is then ready for moistening the seed of colver or of other legumes. It is understood, of course, that, in the case of clover, clover nodules will be used for the preparation of the culture; in the case of alfalfa, alfalfa nodules, etc.

A Simpler Method

For practical purposes the process may be simplified to the extent that the nodules would be carefully rinsed in boiled and cooled water, and then crushed in a small quantity of boiled and cooled water in a tumbler and then this small quantity of liquid containing the crushed nodules poured into the culture solution made up as described above. It is to be remembered, of course, that organisms other than the nodule bacteria would multiply in this culture solution and that it is only the trained bacteriolgist who can observe the necessary precautions to secure a really pure culture of nodule organisms.

Making Soil Suspension

It would be simpler in your case to inoculate your seed with a soil suspension. Such a soil suspension is obtained by placing in a tub or barrel a quantity of soil from a field in which good crops of the particular legume have been grown. About one gallon of water to one quart of soil would give a satisfactory suspension. After the soil and water are thoroly stirred, the suspended material should be allowed to settle in the tub or barrel. The bacteria themselves are so very minute that they would float for an almost indefinite length of time.

A quantity of this soil suspension is then transferred to another tub or barrel and used for moistening the seed. This process is based on the fact that the seed so moistened with the soil suspension will have a sufficient number of nodule bacteria clinging to it to cause satisfactory inoculation after the seed germinates.

Milk Makes It Stick

In order to make the soil suspension stick better to the seed some experiment stations recommend that a small quantity of glue be employed, usually one pound of liquid glue or one-half pound of dry glue to each gallon of water. More recent experiments show that this is unnecessary.

On the other hand, we [illegible] recent interesting developments in [illegible] experiments in Denmark wh[illegible] the use of a small quantity of m[illegible] for mixing with the soil suspen[illegible] helpful.

It may be suggested th[illegible] that, after you obtain your s[illegible]pension as directed, you dilu[illegible] with about one-third volume [illegible] milk, place the soil suspens[illegible] milk mixture in a clean tu[illegible] add enough seed so that th[illegible] would be barely moistened [illegible] liquid. The seed is then [illegible] sown in the usual way [illegible] mean.

Improving the Farm Home Grounds

This Farmer Completely Transformed a Deserted House and Weed Infested Yard

By IRWIN LONGENECKER,
Lebanon County, Pa.

IN TRAVELING thru rural Pennsylvania one can not help but notice the many country farms which, with the application of a coat of paint, the grading of lawns, the planting of trees and shrubbery and the artistic arrangement of a few flower beds, could be vastly improved in appearance and value.

Pennsylvania has many beautiful rural homes, so many in fact, that the seeker of ideas for home improvement need not travel very far to secure all the information necessary to beautify and improve his home.

However, there are far too many rural homes that are deteriorating, both in appearance and value, simply thru neglect.

Reducing the Paint Bill

We wonder whether some of the owners of these neglected homes are not possessed with a mistaken idea in regard to costs and upkeep.

Probably one of the most expensive items of upkeep is paint, and yet any banker will tell us that paint is a good investment because it protects the building from the weather. Therefore, paint increases the value of our homes thru its protection, besides improving their appearance.

One may, however, reduce the painting bill to a very appreciable extent by becoming one's own painter. This idea may be objectionable, but it is by no means as difficult and unpleasant a task as many seem to think.

Your local painter, unless he is an exception to the rule, will gladly furnish not only the paint but the ideas and first cost of material as well, and if he is human—and most painters are—he will come to your home and help you get properly started. Of course he will charge you for his time, and rightly so, as he could hardly be expected to give you his time free of charge.

One may also purchase a few hours of a landscape gardener's time to secure plenty of ideas on the proper grading of lawns, the intelligent and artistic setting of shrubbery and flowers. Many good suggestions also may be obtained thru the several nurserymen in your section.

Mr. Longenecker's home as it appeared last summer.

The writer has seen many cases of dilapidated, run-down houses, purchased by enterprising, wide-awake farmers, who, by the expenditure of moderate sums of money, have improved these homes during the course of several years and have practically doubled their value. This cannot be accomplished, however, unless one is willing to roll up his shirt sleeves and work.

If you have never been able to derive any pleasure and enjoyment from the process of home beautifying and improvement, let us suggest that during this winter you include in your plans for the coming spring and summer, a real, sure-enough program of home improvement and then observe the change of expressions on the countenance of your good wife and kiddles.

Watch your local banker's face as he drives by your improved home and do not be surprised if later on you receive an offer for your home from some investor or real estate agent who happens along and admires your beautiful place.

In the accompanying illustration may be seen a home which was purchased five years ago. During a period of several years this house was untenanted. A coat of dirty looking red paint covered it, while the barn never had any paint whatever. Weeds of all kinds vied with each other for supremacy. The fruit trees plainly showed the signs of neglect.

The Wife Did Double Duty

A poultry house, twelve by twenty feet, stood within thirty feet of the east side of the house, presumably in order that the good housewife might act in the capacity of watch dog while attending to her household duties.

The surface water from the road, about 200 yards away, had plowed an unsightly gutter all the way down the driveway thru the lawn to within a few feet of the house.

Only those with courage, grit and determination would consider the purchasing of such a forsaken looking place. The present owner, however, saw the possibilities for the creation of a fine home. He at once moved the poultry house to the rear of the residence where a southern slope furnished an ideal place for [to page 22]

Brief Views of the Products Show

Preliminary Report on State Farm Exposition and Agricultural Convention

By C. L. WHITE, Associate Editor

NO ONE person could see and hear more than a very small part of the things to be seen and heard at the Ninth Annual Pennsylvania Farm Products Show held in Harrisburg January 19 to 23,—the show was too large and there were too many organizations holding meetings at the same time. We shall record here only a few observations made during the early part of the week. Other observers will give more details about meetings and exhibits in future issues.

Perhaps the most noticeable improvement in this year's show is in the layout of the exhibits and the proximity of the exhibition buildings. The long trolley ride necessary to reach one of the buildings formerly used has been eliminated. This year all of the show buildings are near the center of town.

We realize the difficulties of laying out a show so that hundreds of different exhibits will fit together in an ordered plan. Thanks to the efforts of Manager Klugh, however, the crazy quilt effect in the exhibit rooms is a thing of the past.

* * *

By far the biggest feature of the show was the Electric Farm, about twenty minutes out of town by trolley. Visitors showed much interest in the many ways electricity was used to lighten farm and household tasks. We shall tell more about the Electric Farm in a future issue.

Judging by appearances on Wednesday morning, Pennsylvania farmers believe in doing their shopping early. The first floor of the Emerson-Brantingham Building, where most of the farm machinery manufacturers had their exhibits, was crowded, but there were few people on the second and third floors where exhibits of farm products were awaiting them.

It wasn't long, however, until the early visitors had decided upon the equipment they would use this season, and had adjourned to the floors above to see what kind of crops they would have to grow to beat the prize winners in this year's show.

* * *

In the booth of the State College Dairy Extension Department was a leaking milk can which represented the four things causing the greatest losses to dairymen. The leaks were labeled inferior cows, low quality products, improper feeding, scrub bulls. On a sign which said much in few words was this: Running a Dairy Business without Records Is Like Running a Clock without Hands. Average Pennsylvania Cow 4000 Pounds Milk. Average Cow Testing Association Cow 7000 Pounds Milk.

Something new in the way of demonstrations was staged by Miss Grace Fitts, of the Townville Vocational School, Crawford County. Two of her students, Bernita Clark and Irma Shaffer, canned real honest-to-goodness fruits and vegetables before the crowd and explained how it was done. Both the pressure cooker and the hot water bath systems were used.

* * *

There was a miniature zoo in one corner of Rendezvous Hall. Some bobcats, otherwise wildcats, and porcupines, were all we saw. The crowd was so thick we didn't learn what the other cages contained. The wildcats were healthy specimens, and much larger than the faithful domestic tomcats which are frequently shot for bobcats by excited hunters, if we are to believe the much told tale that is attached to the greatest gunner in almost every country community.

* * *

At the meeting of the Pennsylvania Farm Bureau Federation on Tuesday evening J. C. Brubaker, president of that organization, gave one of the best talks on co-operation we have heard in a long time. Mr. Brubaker looks upon the co-operative movement among farmers as an attempt to stabilize the industry rather than as an effort to force prices up arbitrarily. He believes in co-operative organizations [to page 22]

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Charactor is made by many acts: it may be lost by a single one.

Keep the Sleds

TIME was, and not so long ago, when a good solid winter with plenty of snow was considered a blessing by all classes. Then city traffic developed so that a heavy snow became almost a calamity in the city. Since the advent of the automobile it is almost equally as bad on the country roads. Sleighs and sleds which were considered a necessary part of a farm's equipment a few years ago have been put away and allowed to go to pieces in most instances so that when a deep, lasting snow comes, making it impossible to use auto vehicles, farmers find themselves almost isolated. A winter covering of snow is helpful to soil and crops and it is likely to continue to come in spite of man's changes in custom. It is not good policy to relegate the runner vehicles to the antique class.

Farm Census and Guesses

THE article on potato crops and prices by Daniel Dean, published in the previous two issues of Pennsylvania Farmer, has evidently set a good many farmers to thinking. As usual some of the thinking is not straight. We thoroly agree with the idea that long range forecasting of yields is misleading, mischievous, and serves no good purpose. We have publicly criticised the practice for several years. However, we do not agree with the suggestion of some readers that all kinds of census-taking and crop reporting be discontinued. Many farmers seem to think that such reports are made for agriculture only, when as a matter of fact production figures for every line of business are assembled and published as regularly as those of agricultural products. It is absolutely necessary for business farmers to be informed as to the size of the various crops in the different sections after they are harvested.

But long-range guesses made before a crop is grown and harvested are positively harmful and should be discontinued. Crop reports during the growing season should go no farther than the furnishing of figures from time to time, showing acreage, growing conditions, progress of development, and such concrete facts as would enable the farmer and others to make their own estimate of the prospects.

There are few if any other lines of business in which the products are made the subject of gambling and speculation in their transit between the producer and the consumer as is the case with farm products, and the long-range forecasts aid in this. The industrial producers have their own selling systems and maintain at least a partial control of selling prices. Farmers should see in this a tip for themselves.

Supervised Co-operation

IT IS not clear where the idea originated of legislating a government bureau into existence for the purpose of aiding and co-ordinating the co-operative work of farmers. It may have been conceived by some of the national business mens' associations, and again it may have sprung from the fertile brain of some department office holder. Possibly it is the child of an honest but misguided congressman, but whatever its origin the idea is not likely to get very far. The Federation of Co-operative Marketing Organizations which met in Washington a short time ago passed resolutions which plainly said, "Let us alone."

Strange as it may seem, many of the same class of big business men who have for several years been demanding that there be less government in business and less supervision of private business have been urgent in their demands for a law creating federal machinery for directing the business of farmers' co-operatives. Do they want to have some public and political control of the business other than the general laws give? Is there greater danger in allowing farmers to create and manage their own business organizations than is the case with other business men? Farmers have just about enough of agencies organized and controlled in their behalf by outside authority.

Butter Prices

COMPARED with pre-war years the price of butter during 1924 was high. But compared with present general price levels, and even with butter prices of 1923, the price averaged low—too low, in fact, to be satisfactory. Only one thing stands out distinctly and that is that butter production last year was the highest in the history of the business. Prices for 1923 and 1924 were about the same at the beginning of each year, and fell to about the same level during the middle of each year, but 1924 prices closed about ten cents below the December price in 1923. Large imports of butter were received during the first half of the year, but after the fall in price here and the rise in price in European countries the imports practically stopped and we exported some butter. However, the net import balance for the year was about 11,000,000 pounds.

Cheap Labor

THERE are those who believe that the immigration laws should be liberalized so that a greater number of farm laborers from Europe might come in. They say that it is the only solution of the farm labor problem in this country, since other lines of industry and the professions are taking farm boys away from the country, leaving the farms under manned.

There is some truth in this analysis, no doubt, but we are not sure that farm labor of the kind likely to come would fill the bill satisfactorily. Farming in America is entirely different from farming in Europe. There the ability to use hoes, spades, scythes, and other primitive implements is all that is needed to make a farm laborer. Here, a satisfactory farm laborer must have brains and skill of a high order. The native born farm boy, given the proper schooling and training, makes the best farm help it is possible to secure. All that is needed is the interest and the will to farm. How can that be secured? By making farming pay. The American boy is ambitious to succeed, but when he sees other callings offer greater opportunities for success, he naturally turns to them, and parents encourage him in his determination. There is need for an economic change and it is time the general public as well as farmers themselves should realize that if American farms are to continue to be the source of American manhood as well as of food the farms must not only produce but they must hold the young men and women by offering them opportunities equal to those in other lines of work.

What Does Agriculture Need?

PRESIDENT COOLIDGE'S hunt for a secretary of agriculture has brought the subject of a secretary's qualifications before the country. The President is reported as holding that the prime qualities in a secretary of agriculture should be those of a high class business man,—one who has the ability to devise means of securing full and complete distribution of farm products. Secretary of Commerce Hoover says that the agricultural problem is one of distribution and crop adjustment; that farmers must reduce in some directions and add certain products which we now import, and thus make the country independent of foreign markets as well as independent of foreign supplies. Then, he says, a proper tariff policy would take care of the farmers' needs.

No fault can be found with this theory, except that it can't be worked. Right here is where the judgment of an intelligent, successful dirt farmer is needed in the office of secretary of agriculture. Such a man knows when a theory is likely to work out in practice, and also when it will not. We do not believe that any man can devise a formula that will solve the low-price trouble so long as we have no way of preventing the export price becoming the home price. The solving of this question is one which our leaders and officials still refuse to tackle.

Why the Potato Embargo?

IT IS difficult to understand the real reason for the placing of an embargo by the English government upon potatoes from the United States. The cause given, that of preventing the introduction of the potato bug, is not well taken. We have had the Colorado beetle with us for fifty years and have been exporting potatoes to European countries every year. It would seem that if they have escaped thus far there is little danger now. Again, they placed no embargo upon Canadian potatoes, yet the Colorado beetle is even worse there than it is with us. The more likely reason for the action is our tariff law and the present price of wheat. The Royal Commission is now at work trying to solve the question of the increase in the price of bread. The common talk in England is that it is due to the action of the American speculators. While the American farmer did not benefit to the extent of all the rise in price, it is well established that it came about when it was found that the world crop was short of last year's production by over 440,000,000 bushels. If the English government is really anxious to reduce the cost of living in that country they are taking a contrary course to effect it—that of keeping out staple food products.

Washington Letter

RECOMMENDS LITTLE LEGISLATION.—If the preliminary report on the emergency in the livestock industry is a fair basis for a prediction, few recommendations to Congress that will require legislative action will be made by the President's agricultural commission. In sympathy with the President's desire for decreased tax burdens, the commission indicates that it will undertake to find a solution for the farmers' problems in existing institutions and by amendments to existing laws that will not require large appropriations.

URGE HIGHER TARIFF RATES.—The livestock associations are asking Congress to fix a tariff of six cents per pound on green hides and fifteen cents a pound on dry hides. They are also asking the President to declare an addition of fifty per cent to the present tariff on canned meat and tallow. The Interstate Commerce Commission is being urged by the livestock men to reduce railroad rates on livestock and meats.

HOOVER DECLINES FARM POST.—Secretary of Commerce Hoover was President Coolidge's choice for Secretary of Agriculture. But he has declined the transfer. "In doing me the honor to suggest that I consider transfer to the post of Secretary of Agriculture," says Mr. Hoover, "the President expressed his belief that the present need of that department was an administration in which emphasis should be given to solution of the farmers' marketing problems. To this I fully agree. Nevertheless, I feel that in the future as in the past, the greatest contribution I could make to the improvement of the farmer's position lay in the advancement of measures that make for the reduction of costs in our whole distribution system and in helping to bring about improvement and stability in the general industrial and commercial situation both at home and abroad."

DEPARTMENT OF COMMERCE MAY DOMINATE.—Failing in his purpose to make Mr. Hoover Secretary of Agriculture, it is predicted in newspaper reports that the President will appoint a man to the position who will be in full accord with Mr. Hoover's farm policies, and that the Department of Agriculture will be little more than a bureau of the Department of Commerce.

Practical farm organization men, on the other hand, feel that the President is too sensible a man and too discreet a politician to insist upon a program which would make the Department of Agriculture an annex to the Commerce Department.

MAY SAVE CONSUMER $100,000,000.—The Capper-Brand bill providing standard weights for bread is attracting much attention. The bakers claim that the consumers would not be benefitted, but Senator Capper declares that enormous profits are being taken by the bread makers, and that the public should be protected from short-weight bread. Representative Brand says we are making bread in this country at the lowest labor cost of any country in the world. We sell bread at eight to nine cents for what purports to be a pound loaf, while in France and England bread sells at from three to four and one-half cents a pound. He believes that short weight bread is costing American consumers $100,000,000 a year.

CHANGES IN McNARY-HAUGEN PLAN.—A meeting of the American Council of Agriculture, the organization promoting the McNary-Haugen plan, was held in Washington, January 19, to discuss proposed changes in the scheme. The new proposal involves the creation of a farmers' export corporation of fifteen men, including the secretaries of the Treasury, Agriculture and Commerce to represent the public, and twelve individuals to be appointed by the President, one for each of the twelve Federal Land Bank districts, from nominations made in each district by bona-fide farm organizations.

WOULD SELL SURPLUS AT WORLD PRICE—This corporation would have power to divert the surplus above domestic market needs to the world markets, selling at the world price. With the surplus removed it is expected that the domestic price would be maintained on a level of the world price plus the tariff.

The corporation would have authority to recoup its losses by an equalization fee which would be charged against the original sale of the same commodity in the domestic market. Instead of a ratio price, as first proposed, it would be known as a "price plus the tariff."

FEWER CATTLE ON FEED.—The low prices for cattle and high priced corn are reflected in a reduced number of cattle on feed. There were only eighty-two per cent as many cattle on feed January 1, 1925, as on the same date last year in the eleven Corn Belt states, according to final estimates of the United States Department of Agriculture. The number on feed in the states east of the Mississippi River was eighty-seven per cent of last year and in the states west of the river it was eight-one per cent.—E. E. Reynolds.

Harrisburg Letter

BLOCS AND HISTORY.—While the feeling in the ranks of Pennsylvania legislators over the manner in which the two houses were organized has been so intensified by developments in naming of House committees that many want to group formally the rural members, there is a disposition to go slow in the matter and avoid the troubles which have beset such associations in sessions gone by. A rural bloc could be a formidable factor in legislation this year if it would hold together. Experience had shown that when appropriation bills are being handled interest in formations has lagged.

BOARD OF STRATEGY NEEDED.—This legislature is made up of many elements and there are so many bills apt to collide that a board of strategy might be able to accomplish more than a board of war. In the last twenty years there have been half a dozen combinations of small county legislators effected, most of which faded, some after developing into debating societies. If the proposal to form a bloc to back a regular agricultural program ever comes about it would have something more definite on which to rally than jazzed ambitions.

THE AGRICULTURAL COMMITTEES.—Managers of the new combination in charge of the legislature have very cleverly handled the make up of the agricultural communities, the membership of which contains legislators from distinctly farming counties. Senator F. W. Culbertson, who heads the Senate committee, comes from the heart of the Juniata Valley, and Representative W. A. Haines, who heads the House committee, lives in Bucks County.

DEPARTMENTAL LEGISLATION.—Comparatively little of the legislation sought by the Department of Agriculture has appeared and it is certain there will be some inquiries made as to why the department wants the whole of the dog license revenue turned into departmental channels. The common belief is that it is to care for cattle killed to prevent spread of tuberculosis, but there is said to be a desire among some of the legislators to earmark, as the phrase goes on Capitol Hill, certain portions to be applied to emergencies such as produced by the Japanese beetle, the corn borer, peach moth and other pests, and for research work. Ill feeling over the budget may result in manhandling of appropriation items, altho at present the disposition is to raise the sums recommended for battling bugs and the like if the administration pares too closely.

WANT EMERGENCY FUND.—Speakers at the final hearing of the State Commission making the inquiry into the state of agriculture in Pennsylvania heard unmistakable statements about necessity of adequate provision for emergencies such as the Japanese beetle. Several formal resolutions urging the inauguration of a special fund from which could be paid cost of meeting at inception raids or outbreaks of beetles, borers and bugs as well as chicken and cattle diseases were presented.

DROP MILK SERVICE.—Action of the Public Service Commission in permitting one of the trolley lines connecting with Philadelphia to abandon its milk carrying service because of established loss of money may result in similar applications coming from other sections of the state.—Hamilton, Harrisburg.

New Jersey Letter

STATE LEGISLATURE ACTIVE.—The agricultural bills prepared by the New Jersey Federation and co-operating organizations have been introduced, and with the mass of bills on every conceivable subject are up for action. The Legislature opened with an overwhelming Republican majority. In the Senate there are eighteen Republicans and three Democrats; in the House forty-seven Republicans and thirteen Democrats. Five women occupy seats in the Assembly. Senator David H. Agans, of Hunterdon County, Master of the New Jersey State Grange, will serve on ten Senate committees and six joint committees.

POTATO LEADERS MEET.—Members and associates of the New Jersey State Potato Improvement Committee will meet at Trenton, N. J., on January 30 to consider the final report of the Committee's work this year. This is the Committee, under the active direction of W. B. Duryee, President of the New Jersey State Potato Association, which met with much success during the fall and late winter with its series of mock trials of the New Jeresy potato. The effect of these mock trials and the advisability of the continuance of the work of the Committee will be considered.

DEER REPORTED PLENTIFUL.—Despite an active deer season in central and southern New Jersey counties last month, farmers report plenty of game still at large. This is of special interest to farmers thruout the southern part of the state in view of the agricultural bill introduced into the State Legislature asking for state appropriation to take care of damage done by deer.

TRI-COUNTY JUNIOR PROJECT.—A move is on foot in Gloucester, Salem and Cumberland counties to develop further interest in junior club work by staging a junior exhibit this next summer at the Alcyon Park Fair. In the five high schools of Swedesboro, Glassboro, Salem, Woodstown and Bridgeton over 100 students are enrolled in the agricultural course. Development of project work at home in conjunction with the high school courses will provide the calves, pigs, poultry, corn and crops for the junior project exhibits at next summer's fair.

FARM ACCOUNT SCHOOLS.—The New Jersey Extension Service reported recently that during last year it had secured 107 farmers in fifteen counties to keep a full set of farm accounts. The success of the plan has encouraged the staging of farm account schools this winter in practically all of the rural counties, with a view of securing more co-operators and so the development of more systematic farming. The Extension Service provides the book free of charge to those who take the course.—B.

New York Letter

OPPORTUNITY FOR VETERINARIANS.—During discussions at the seventeenth annual convention of the state association of veterinarians this week Dean V. A. Moore expressed fears because of the depletion of the number of veterinarians in the state. With increased values of livestock, added human opportunities to save human life, the extension of the tuberculin test, and the few now taking training, the possibilities for young men in this field seem unlimited. Two hundred men, many of them leaders in the profession, took part in the association's best meeting.

FARMERS' WEEK.—Women's interests will be a big feature in the events of the annual Farmers' Week meeting, which begins on February 9 at Cornell. A good share of the program will be given to children and their care and training. Character building will be taught in a series of lectures by Dr. Nellie Perkins, a national figure in child training work. Country pastors are to have a strong program of their own, and editors of country weeklies will hold their fifth annual conference.

STATE FAIR INVESTIGATED.—The new lieutenant-governor, Seymour H. Lowman, has uncovered what he terms a "mess" in state fair matters, and unpaid debts amounting to $60,000 will necessitate an appropriation to straighten up the commission's finances. No misappropriation of funds is charged, but bad judgment and poor management seems to have ruled. The farmers seem likely to get more attention than they have had and their one representative on the commission, George P. Fitts, seems likely to be reappointed.

FARMERS' EXCHANGE.—M. C. Burritt, who is largely responsible for the development of the farm bureau in this state, is now comptroller of the Grange League-Federation Exchange, which last year did an $8,000,000 business. This fact will give added confidence in the financial matters of this organization which is supported by 35,000 farmer share holders.

GRANGE MEETS.—The New York State Grange convenes at Saratoga Springs on February 3-7. The annual meeting of the directors of its related organization, the G. L. F., will precede this meeting by one day. S. L. Strivings, State Grange Master, recently expressed fear that more youths will leave the farms during the coming year than for some time.—M. G. F.

The Farmer's Wife Knows

that trying to make a poorly equipped farm pay is a losing battle. What she may *not* know is this—that by borrowing money through

"The Mortgage That Pays Itself Off"

the farm can be put promptly on a profitable basis, with new equipment and improvements. *There will be no burden paying it off.* Easy semi-annual payments for 33 years and the farm is clear. Straight 6% interest plus 1% reduction of principal each year.

OUR FARM

Where an Editor Works and Thinks

ANOTHER birthday sneaked up and went by last week. They seem to overtake me much more frequently than they did when a boy. Then it seemed as if Father Time must be carrying a dumb watch, so long did it take to pass from one birthday to the next. I can well remember looking into the future and setting sixteen as the age when, if it ever arrived, I would be practically grown up and could do as I pleased. The day came at last but, strange to say, nothing noticeable happened beyond a temporary raising of the chin and swelling of the chest. The next day was about as previous days had been.

Courage revived, however, with the realization that Youth had been mistaken as to the time complete independence arrived and I set another date. Twenty-one was, of course, the proper date for emancipation.

The five long years finally passed. The great day found me in the middle of my fourth term of school as a teacher. What a proud day that was! I was a man now and could do as I pleased. I am sure a very dignified authority reigned in that school during that day. It was shown by the awed hush that prevailed in the overcrowded school house.

"Twenty-one, and my own boss." That was the waking thought next morning. Nobody could tell me now what I had to do. (The fact that nobody ever did, to any extent, did not make any difference in the feeling.) But what was that saying, "Time to get up; school again today?" I got up as usual, ate breakfast at the regular time, and set out to walk thru the snow a mile and a half to school, built the fire and awaited the coming of the pupils. In the interim I had time to think. "Why, how is this?" I said to myself. "This morning is no different from day before yesterday, and the day before, and all the days since I can remember. No boss? What about Duty, Receessity?" These I found were silently standing beside me pointing with an authorative finger to what I had to do.

That morning, in the silence of the old school house, I got an inkling of life's lesson which has been verified a thousand times since. When I hear a young person telling what they will do when they are their own boss I say to myself, for it is of no use to say it to them, "There ain't no such thing."

* * *

BUT to get back to the present and to the birthday holiday just passed, (a holiday because it happened on Sunday). We had a delicious strawberry shortcake, made of fresh, luscious southern strawberries. That is an extravagance which has become a regular thing on this occasion. The family approves of it because they all like shortcake, and they were all there. These things, and a basket of birthday letters, which had been invited by the Better-half and brought to me in a basket as a surprise, completed a day as joyous as the one which happened —— years ago when I ignorantly believed there was such a thing as complete personal liberty.

* * *

THE seed, plant and tree orders are now in the making. We find it a perplexing problem to decide upon the quantity to order for a business of general market gardening. Heretofore the amount of each kind was small because we were doing only a side-line business, but with the coming of spring we plan on opening up in what is for us a rather extensive scale. What will pay best? How much can we sell profitably? How will the different things work together as to time and labor? These questions are perplexing and only by experience can we know the answer. If permitted, the results of our efforts will be frankly discussed here from time to time.

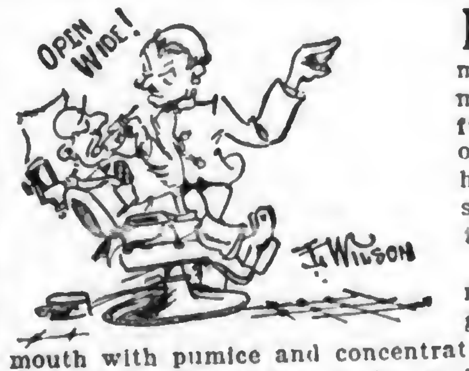
* * *

A FRIEND asked the other day why it was the editorial "we" had been changed to "I" in this column. Next spring "Our Farm" company will include our son. He will have equal voice and responsibility, and probably an unequal amount of the work to do. Having spent the first fifteen years of his life as an interested and active young farmer, he imbibed a love for the soil and the great out-of-doors to such an extent that his later schooling and city business experience has not diminished during the last eleven years, and he is now counting the days to the time when snow is gone and the bluebirds come. Then we shall write with even greater pride than in the past, "Our Farm."—R. P. K.

The speediness of justice, the inexpensiveness of justice, the ready access of justice, is the greater part of justice itself.—Woodrow Wilson.

THE CHEERFUL PLOWMAN

Helped by Torture



I'VE made my winter visit to Dentist Will McGee, and now I know my molars are fit as they can be, while all my sharp incisors are white and tartar-free. I know it isn't pleasant to climb up on his chair, to have him use his auger, his rip-saw and his square, to have him scrape, and burrow, and chisel at me there.

It's anything but funny to have him root and pry, to crank his torture engines before my very eye, to fill my mouth with pumice and concentrated lye. I dread to meet the dentist as I would dread a storm, or hot and scratchy flannel in August when it's warm, or half a hundred bronchos in perfect bucking form; and yet with all my dreading and quaking in my shoes I like to have my grinders so they are fit to use, nor have I any molars that I prefer to lose.

So twice a year I stagger to Will McGee's domain, with tremors in my knee-caps and terrors in my brain, prepared for semi-slaughter and half a ton of pain.

It pays me well to do it, I'm doubly sure of that, for I'm as full of ginger as any tabby cat, my blood and health are perfect from shoe-pegs to my hat; and half of this I credit to Dentist Will McGee, that man whose cruel equipment I always dread to see, whose pillory and weapons are agony to me!—J. Edw. Tufft.

Confer on Farm Business

BUSINESS organizations of New Jersey farmers will seek to learn thru conference and discussion modern merchandising and organization methods at a conference arranged by the State Bureau of Markets which was announced at the recent annual meeting of the New Jersey Federation of County Boards of Agriculture. The conference will be held in Trenton on February 10 and 11, and the officers and directors of every farmers' buying and selling organization in the state are urged to attend.

A Two-day Program

The program, which covers two days and includes five subjects, has been arranged so that each subject will be introduced by a man of outstanding national reputation and experience followed by several men who will open up for discussion different phases of the same subject. Doctor E. G. Nourse, of the American Institute of Economics, will open the subject of "Opportunities and Limitations of Co-operation," while Mr. Oliver J. Sands, president of the American National Bank of Richmond, Va., and financial executive of the Virginia Tobacco Growers' Selling Organization, will discuss "Contracts and Financing."

Several Famous Speakers

The program is the most ambitious undertaking yet arranged by the Bureau of Markets in its series of annual conferences of this kind of which this is the sixth. Among the other prominent visitors who will address the conference are Mr. John D. Miller, Chief Counsel of the Dairymen's League; Mr. M. C. Burritt, President of the Western New York Fruit Growers' Association; Prof. F. B. Bomberger, Director of the Extension Division of the Maryland Agricultural College, and Mr. Chris. L. Christensen of the United States Department of Agriculture.

Reforestation Simplified

THRU F. T. Murphy, forestry extension expert of State College, the following story of self reforestation has been learned. W. H. Whiting, a farmer of Susquehanna County, Pennsylvania, upon the advice of a forester fenced off his woodlot early last spring and left it unpastured. By fall, the woodlot was covered quite uniformly by a fine growth of every variety of little trees. Hitherto the browsing and tramping of the cattle had almost destroyed all the little seedling trees as they came up.

I think that every owner of a plot of land in the country should know of this plan.

"My Kingdom for a Tree"

We cannot lay too much emphasis upon reforestation; we pay far too little attention to it until it is too late. If we do not watch out, and quickly at that, all of us will soon see the day when the historic saying about a horse will be changed to: "A tree, a tree, my kingdom for a tree."

Our lumbering operations have been fearfully slovenly and frightfully extravagant. Then unnecessary forest fires have laid the backbone of our fertile soil bare so that rains and floods can harrow them at will. Soon will follow pestilence and famine and it may be said by future geographers that America, like China and the other deserts of the eastern hemisphere, owes its downfall, both as a nation and a habitat, to the murdering of our trees.—R. I. F., Lebanon County, Pa.

The secret of being loved is in being lovely; and the secret of being lovely is in being unselfish.—J. G. Holland.

What Mr. Wallace Said

FORMER United States Secretary of Agriculture, the late Mr. Henry C. Wallace, reported to President Coolidge, Nov. 30, 1923, on the wheat situation:

"It is quite apparent," said Mr. Wallace, "that the Canadian farmer has advantages which enable him to produce wheat at materially lower costs per bushel than the American farmer.

"The Canadian wheat farmer enjoys substantial advantages over the American producer in the matter of yields, land values, the quality of wheat he produces, and the lower freight rates from points equally distant from markets.

"The yield of wheat, which is a very important factor in the cost of production, is materially higher in Western Canada than in many of our wheat-producing States.

"The freight rates from points in Montana are from 7 to 10 cents a bushel higher than the rates in Canada for the same distances to Port Arthur and Fort William at the head of the Lakes, from which the rates to Liverpool under normal conditions are substantially the same as from Duluth."

Canada Gets Higher Prices

In addition to these advantages of yield, quality and lower freight rates, the *price* of wheat is averaging *higher* in Canada than in the United States. (Compare Winnipeg and Chicago quotations).

The quality of Canada's wheat, flour, beef, bacon, butter, eggs, cheese, apples and other staples has won for her a place in the British market in open competition with the world. Canada is a country for diversified farming and high-class live stock, with a wide variety of products, ranging from wheat and corn to tobacco, peaches, melons and the finest apples grown.

Good Land is Cheap in Canada

Canada is equipped to produce—with land, railroads, elevators, steamships, and a white man's climate. She is waiting for producers—for people. Homesteads of 160 acres are offered free for those who will pioneer. Good land near the railroads and the towns, with roads, stores, mail service, telegraph and telephone connection, churches and schools, is offered at from $15 to $20 per acre—some of the best land out doors, yielding as high as 50 bushels of wheat per acre.

Canada is a self-governed country ruled by the will of a free people. It is a land of law and order, and respect for constituted authority. Canada has 40,000 miles of railroad opening up millions of acres of new land. Canada has a national plant and equipment for double her present population. Canada offers a hearty welcome—Government directors and supervisors assist settlers in securing suitable locations.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., discovered a process of making a new kind of paint without the use of oil. He named it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one fourth as much. Write to **A. L. Rice, Inc., Manufacturers, 111 North St., Adams, N. Y.,** and a trial package will be mailed to you, also color card and full information showing you how you can save a good many dollars. Write today.

GOOD FARMING PAYS

Every farmer wants to save labor, time, horse-power, seed and raise bigger, better and surer crops. The **WESTERN Pulverizer, Packer & Mulcher** (3 machines in 1) will do all this. It pulverizes and packs as deep as plowed and forms a loose, granular, moisture-retaining mulch on top—**making a perfect seedbed**—in one operation. It makes 3 to 10 bushels more per acre by rolling winter wheat or other growing grain in spring, whether ground is hard-crusted and cracked, heaved, loose or unpacked. The WESTERN has no equal for this work, or for making seedbed for wheat, corn, alfalfa or any other crops or for covering alfalfa, clover and grass seed.

THE SPROCKET PACKER

13 SIZES 1 AND 3 SECTIONS

GET OUR FREE CATALOG AND BOOK ON SEEDBEDS It shows the machine and its work by photos taken in the fields—Explains its principle and construction; why it does better work with less horse-power and saves one-third seed; why it is the **only** roller that leaves a mulch on top of the packed soil. It contains letters from many users, proving our statements; and much other valuable information. "Worth its Weight in Gold." Write **TODAY** for Catalog and delivered price from nearest shipping point.

Manager Pomona Gardens, Newark, Delaware

Trying to Fill a Gap in the Iceberg Lettuce Season

BEARING upon the discussion in this column several weeks ago regarding the future of eastern lettuce growing, the following extract from the January 3 issue of Crops and Markets, which is published by the U. S. Government, is highly entertaining:

"Lettuce production in the United States has increased rapidly within the past few years. About six times as many cars were shipped in 1923 as in 1916. Most of the momentum has been given during the past five years, partly as a result of the stress placed upon the value of vegetables, and particularly lettuce, in the diet. Some growers reaped substantial profits, which in turn attracted others to the growing of lettuce, until production in some cases has become almost too heavy for orderly marketing."

The West Shows Most Increase

The greatest increases in lettuce growing have come in the far western states, and in several of the mountain states. California, the heaviest producer of all, shipped 2700 cars in 1919, over 17,000 cars in 1924. Idaho shipped one car in 1919, 1200 cars in 1924.

There have been increases in the East also, but nothing like the increase in the West. As the East chiefly grows Big Boston or others like it, while the West grows so-called Iceberg, which is chiefly New York or Wonderful, the changes in acreage are somewhat significant of the changes in popularity of the two lettuce types. Most eastern markets are coming to prefer the Iceberg type, partly because at prices for the last six months the buyer has obtained a high value for her money, and partly because the Iceberg has better keeping quality in the home.

Crop figures for lettuce seem to show that there is a gap in the Iceberg supply in August of every year. The gap may extend a little way into July and September. This period is usually the one which is filled by eastern-grown Big Boston, especially that from New York.

A Hot Weather Variety

Most growers find it impossible to provide high grade head lettuce of the Iceberg type during hot weather. None of the shipping varieties of this type are good for summer planting in the East. Yet for small town trade, at least direct to consumer trade, I think there may be a chance to use the Brittle Ice variety under some circumstances. I have seen this variety forming very large heads in the hottest part of summer, when it was provided with plenty of water.

The Brittle Ice is definitely out of the running as a shipping variety, as the leaves are too crisp to stand much handling. Perhaps it is equally out of the running for any kind of trade that demands exposure to sun and drying air after the heads have been cut. The heads when well grown may be too large for some kinds of trade.

Yet, with all its faults, Brittle Ice is worthy of a trial on a small scale, just to serve the Iceberg trade in August. We shall plant modestly of it on our place this season.—W. C. P.

Jersey Farm Show Awards

MERCER COUNTY scored highest in the number of awards received at the New Jersey Farm Products Show held in connection with Agriculture Week at Trenton.

Mercer won out easily in the splendid apple exhibition and ranked high in sweet potatoes, and made a good showing in corn. For the third year the State Bankers' Association, thru its agricultural committee of which Mr. H. S. Mowrer, of Ocean City, is chairman, offered $100 in gold to the County Board of Agriculture making the best all-around exhibit.

Monmouth County won the grand championship in corn with an exhibit by Edgar Reid, of Tennent, showing Reid's Yellow Dent variety. The sweepstakes prize for North Jersey was won by Hoffman Bros., of Sommerville, with a Reid's Yellow Dent exhibit, while the sweepstakes for South Jersey was won by John T. Harris, Bridgeton, with a Reid's Yellow Dent exhibit.

White and Yellow Corn Awards

In white corn the awards are as follows: North Jersey, first, Hoffman Bros., Somerville; second, J. W. Hendrickson, Trenton; third, Ray Huff, Hope. South Jersey, first, M. S. Pine, Freehold; second, Frances Bates, Bridgeton, third, Pine and Solomon, Freehold; fourth, R. B. Phillips, Chesterfield.

In white cap corn the awards were: North Jersey, first, Ernest Simpkin, Yardville; second, Hoffman Bros., Somerville; third, G. C. Snook, Trenton; fourth, Samuel T. Hoffman, Neshanic. South Jersey, first, Wm. H. Reid, Tennent; second, B. C. Cook, Farmingdale; third, A. H. Forsythe, Burlington County; fourth, Geo. P. Waln, Allentown.

In yellow corn the awards were: North Jersey, first, Samuel T. Hoffman, Neshanic; second, Elwood Croshaw, Hightstown; third, J. H. Hankinson, Glen Moore; fourth, Warren Croshaw, Hightstown. South Jersey, first, Floyd Harris, Shiloh; second, Marvin Clayton, Imlaystown; third, Lester Smalley, Cumberland County; fourth, Michael Reid, Mt. Holly.

Single and Thirty-ear Exhibits

In flint corn the awards were: first, Hoffman Bros., Somerville; second, McPeak Bros., Hackettstown.

In single ear exhibit the awards were: Best White, Hoffman Bros., Somerville; Best Yellow, Geo. P. Waln, Allentown; Best Flint, Hoffman Bros., Somerville; Best White Cap, Wm. H. Reid, Tennent.

In special thirty-ear seed exhibit the awards were: North Jersey, first, Hoffman Bros., Somerville; second, Samuel T. Hoffman, Neshanic; third, S. Elwood Croshaw, Hightstown; fourth, Fred Gardner, Robbinsville. South Jersey, first, David Croshaw, Wrightstown; second, Geo. Phillips, Jobstown; third, Wm. A. Reid, Mt. Holly; fourth, John Harris, Bridgeton.

If a man has nothing but his money, how very poor he is. We often think well of what money can buy. It is well for us sometimes to think of what it can not buy. It cannot make a man a gentleman, nor a woman a lady. No! our lives are not rich because of our possessions, but because of our friends, because of our memories, because of the hearts we have learned to love and who have learned to love us.

Free for-all Potato Show

A FEATURE of the eighteenth annual Farmers' Week to be held at the New York State College of Agriculture at Ithaca, February 9 to 14, will be the free-for-all potato show. Every potato grower in New York state is specifically invited to enter this competition, and boys' and girls' exhibits will receive the same consideration as the rest.

Any variety, named or unnamed, is eligible to the exhibit. Each entry should consist of twelve tubers. They should be selected for uniformity, freedom from blemish and disease, and should be wrapped in paper to prevent them from becoming dark skinned. All entries should be in the hands of the vegetable gardening department of the state college at Ithaca before February 5. They should be carefully packed and mailed by parcel post addressed to the vegetable gardening department.

After Farmers' Week the college will send each exhibitor a report commenting on the quality of his entry.

The less a man thinks or knows about his virtues the better we like him.—Emerson.

1898 FORREST'S 1925 HONEST SEEDS

New Tomato, the "Cortland"

Liberal Sized Packet Mailed FREE

MAIL COUPON BELOW

"Cortland" Tomato plant had 22 big tomatoes all ripe at one time.

Avoid the Winter *Slump* in milk *yield*—

The winter months are the critical period of the year for the dairyman. The herd may come through the summer showing a nice profit—only to see it wiped out by a slump in milk production, or disease, or both.

No need to suffer an annual dairy loss in winter. By investing a few cents a day in *Kow-Kare* the milk-making organs of all your cows will be invigorated so that the strain of dry feeding will not break down their production.

Kow-Kare is a medicine-tonic that acts directly on the milk-making organs, the digestion and assimilation. It builds a *permanent* vigor in these key organs, enabling the cow to thrive and milk to capacity on the regular winter diet.

To use *Kow-Kare* is a sane investment. It is health and profit insurance. Its slight cost is returned many times in the quickly-noticeable improvement in milk flow.

The *Kow-Kare* feeding plan is winning thousands of new recruits among dairymen yearly. The usual method is to feed a tablespoonful of *Kow-Kare* twice a day, one week of each month during the winter. The cost averages only about a cent a day per cow.

Begin now with *Kow-Kare*. Your dealer has it—feed stores, general stores, druggists—in $1.25 and 65c packages. Order direct if yours is not supplied.

DAIRY ASSOCIATION CO., Inc.
LYNDONVILLE, VT.

Do You Have A Sick Cow!

Kow-Kare has back of it a quarter-century record of success in the treatment of such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc. It builds up the digestive and genital organs to a vigor that makes them function naturally.

As an aid at the Calving period *Kow-Kare* has no equal.

Send for valuable free treatise, *"The Home Cow Doctor."*

Why Strain? Milk

—with a cloth or fine mesh wire screen strainer when neither of them can possibly remove ALL the dirt from the milk? And you can't get top-notch prices for milk that is not clean.

Dr. Clark's
Purity Milk Strainer

is guaranteed to remove ALL dirt, dust, muck and other sediment from the milk—no matter how fine—or your money refunded. No other strainer made can do that.

HERE'S WHY: The Purity Strainer is fitted with a sterilized cotton pad, tightly clamped to bottom, making it necessary for milk to go THROUGH the cotton pad, which removes every particle of dirt.

PURITY Cotton Discs are made in any size from 5 1-2 in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.

Used and endorsed by Agricultural Colleges and Dairy Inspectors, Borden's, VanCamp's, Carnation, Mohawk, and Sheffield Farms Dairies.

Made in two sizes—10 quart and 18 quart. If you want clean milk, ask your dealer for the Purity Strainer, or write for circular and prices.

Purity Stamping Company
Dept. B Battle Creek, Mich.

World's Largest Manufacturers of Cotton Discs for strainers and filters.

Aaltje's Owner Grew into the Purebred Business

TO BE the highest butterfat producer among all the cows in a cow testing association is no mean honor. This position in the Centre County Association for the past year was occupied by a purebred Holstein cow owned by James J. Markle.

Her name is Aaltje Twisk Pietertje, and while this name sounds very aristocratic, she is not unduly egotistic about it and goes right ahead producing milk like a real worker rather than a society dame. During the year she produced 523 pounds of butterfat, an amount three times as great as the average cow in Pennsylvania, and gave her owner a profit of $102.84 above the cost of her feed which was $103.58.

He Must Educate His Cows

This is not the only good cow in Mr. Markle's herd. The average yield of milk and butterfat for his whole herd was nearly double that of the average cow in the state. Evidently Mr. Markle must have been talking "college stuff" to his cows to make them do so well, since he is a graduate of the agricultural course at State College, class of 1903. He has put his agricultural education right to work, having been engaged in farming all his life except when attending college and even then when he was at home to "do chores" mornings and evenings.

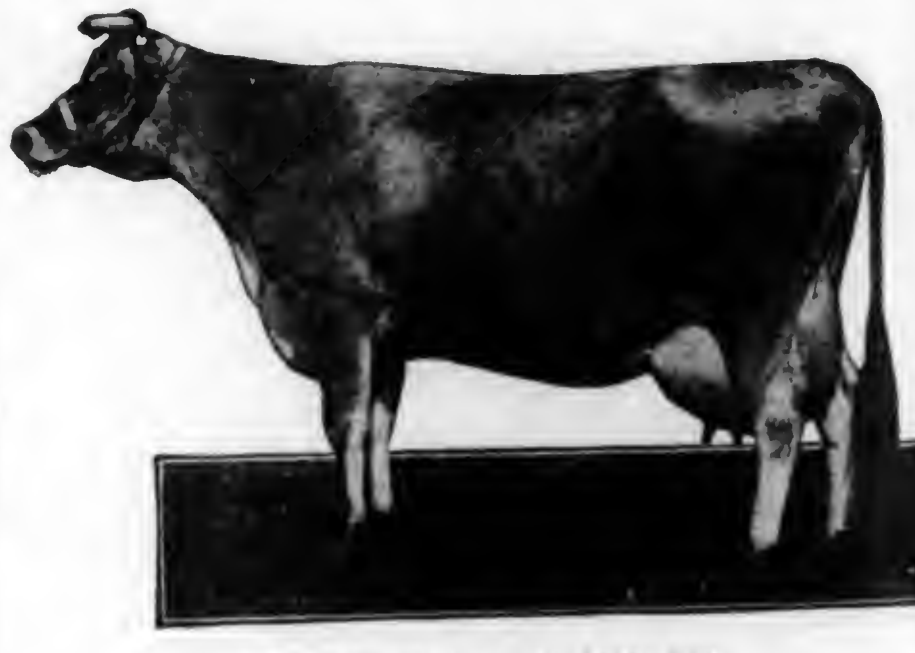
Starting with grade cows and a purebred sire, he gradually built up a herd of good grades and purchased a few purebreds. A few years ago he disposed of his grade animals and now keeps a purebred herd. Mr. Markle feels that this is the best way to secure a herd of purebred cows—grow into purebreds rather than go into the purebred business. He now has nineteen head of registered Holsteins, most of which have been produced on the farm. The herd has recently passed its second tuberculin test. No reactors were found, and it is expected that the herd will soon be on the accredited list.

Good Income from Durocs

Jim, as Mr. Markle is known to his friends, asserts that the dairy business is dependable, and while it calls for a lot of hard work and close attention to business, yet it is safe and sure when it forms the main enterprise on the farm.

A second profitable venture in Mr. Markle's system of farming is the swine business. A purebred Duroc Jersey boar heads the herd which includes a number of purebred Duroc Jersey sows. Last year over $1500 was realized from the sale of pork. The farm is well adapted to wheat growing and it is raised as a cash crop; over 400 bushels were grown the past year.

Mr. Markle is fortunate in having a fine family, including three girls and two boys. Mrs. Markle and the young folks take a great interest in the dairy herd. The boys have some animals of their own and can talk cows by the hour. While the fine record made by Aaltje Twisk Pietertje is doubtless due in part to her breeding, yet it is likely that the care and feeding she received were the largest factors in her obtaining the coveted position at the head of the production list in the cow testing association.



A fine example of the best Jersey type.

Keystone Dairy Industry

THE dairy cow is not only the "foster mother of the human race" but one of the greatest income producers on farms of the Keystone State.

More than $100,000,000 annually is returned to the farms of Pennsylvania in payment for milk and other dairy products, according to E. B. Fitts, dairy extension specialist of the Pennsylvania State College. This is approximately one-fifteenth of the total farm value of the dairy products of the United States. In addition, hundreds of plants, giving employment to thousands of persons, are in operation engaged in handling milk or in manufacturing various dairy products, or both.

In comparison with other states of the Union, the 1920 census ranked Pennsylvania seventh in total number of dairy cattle, fourth in volume of milk produced, and third in farm value of dairy products.

Fifty-five counties in the state receive more than a half million dollars from the sale of dairy products. Thirty-four receive in excess of $1,000,000 and three in excess of $5,000,000.

Twins having arrived, the father told little Peter that he needn't go to school that day.

Little Peter—"But wouldn't it be just as good to tell teacher tomorrow I've got one new little brother, and next week stay home again and tell her I've got one more?"

Paint for Farm Buildings

Red and White Most Popular for Barns and Houses

WHITE seems to be the farmers' favorite color for houses: In a recent survey of many farm districts 78.7 per cent of farmers expressed a preference for that color. Red is nearly as strong a favorite for barns and is well in the lead for outbuildings and machinery.

Gray, cream, brown, green, yellow, slate and blue come next in preference in the order in which they are given. There seems to be no special reason for these choices of color, merely a question of preference. Some farmers believe that red, gray and brown "do not show dirt." Tradition seems to have a strong influence in their choice of color scemes.

Should Harmonize with Landscape

More country people are beginning to recognize the value of colors in connection with trees and shrubbery, and to paint their buildings to harmonize with the landscape.

In going about our countryside and our surburban districts, it is apparent that as a whole houses do not possess any particular distinction and charm; that for the greater part they are uninteresting, and give us the feeling that something about them is wrong. When we look at them critically, we see that this is due in part to architectural faults and lapses; but the comprehending eye realizes that in the main it is a matter of color. We give scant thought to the colors that we paint our houses; to the tint of the body color, trim and roof, and to the relation of the colors to the surroundings, natural and artificial.

Choosing Color Combinations

The strong contrasts of deep brown, light buff and brick red, eminently suitable to an English half-timbered design, would be impossible for a colonial farmhouse, and the colors appropriate to a Dutch Colonial house might be most unsuitable for a Georgian design.

It is almost always the case that a house looks best when it blends into its background and surroundings; the roof, therefore, when against the sky, should be of subdued tone and color, but can be brighter when against foliage or other buildings. While a large house can be dark, a small one cannot afford to be, for dark walls, or light walls with dark trim will make it seem still smaller.

In selecting color combinations, the best results are usually found in varying shades of the same color, as for example the walls buff, the trim ivory and the roof brown. There is then more harmony than in a house with white walls, green shutters and a red roof.

To Avoid Patchiness

While patchiness should be avoided, there should always be a contrasting relief to large surfaces of one color, as trim and shutters in a contrasting color or tone will relieve the monotony of evenly toned walls. Ornamental work should not be brought out by painting; a porch column, for instance, should be one color thruout and not different colors for shaft, base and cap.

No material should be painted in imitation of some other material, as brickwork, for instance, or the graining of wood. It should be remembered that a mass of color seen from a distance gives a very different impression from a patch of the same color seen near by, which undoubtedly explains why so many houses look quite different from what their owners expected.

For it is only by trying to understand others, that we can get our own hearts understood; and in matters of human feeling the clement judge is the most successful pleader.
—Robert Louis Stevenson.

Dairy, Wool, Tobacco Awards

Dairy Products

BELOW are the principal prize winners in the dairy products, wool and tobacco exhibition at the 1925 Pennsylvania Farm Products Show.

CLASS 1—MILK

A—Raw Market Milk (from tuberculosis-free cows).—1, H. F. Dague, Whitford, $14; 2, Thos. Hadfield, Downingtown, $12; 3, Longwood Farms, Kennett Square, $10.

Tobacco

Seedleaf Wraper.—1, J. H. Hostetter, Millersville; 2, James B. Adair, Lancaster.

Seedleaf Binder.—1, Allen R. Hoffer, Manheim; 2, J. B. Brubaker, Mount Joy.

Seedleaf Filler.—1, J. E. Hockenberg, Elizabethtown; 2, C. S. Newcomer, Mount Joy.

Havana Wrappers.—1, R. T. Miller, Lock Haven; 2, Hayes Dorey, Lock Haven.

Havana Binders.—1, S. C. Ramm, Lock Haven; 2, David Baird, Lock Haven.

Havana Filler.—1, Ben M. Baird, Lock Haven; 2, David Baird, Lock Haven.

No More Dirty Barn Drudgery

The dirtiest chore on the farm! That dull, monotonous, time-wasting task—*cleaning out the barn!* How many years have you been a slave to a manure-bespattered wheelbarrow?

Why not get rid of this disagreeable drudgery? Put in a big, smooth-running, easy-lifting Louden Manure Carrier *now* and turn this ornery, everyday chore into a job that's *easy* for even a 12-year-old boy. You'll agree with J. L. Peck of Gypsum, Kansas, who says: "You cannot appreciate, until you have used it, the work you save with a Louden Manure Carrier that costs so little and lasts so long with no repairs."

Save Manure Money

Manure is worth money, but its true value depends upon how much time and labor you spend in handling it. The cheaper you get it out of the barn the more you make on it.

Your Louden Manure Carrier takes the equal of 5 wheelbarrow loads at once and the chore is finished in a fraction of the usual time. Dumping direct into wagon will do away with reforking. The chore time saved can be devoted to *income producing* labor, that increases your farm earnings.

Send for This Booklet

Many Louden Carriers are still in service after 20 years' daily use. Naturally, that's the kind of a Carrier *you* want. And the Louden is easily installed in any barn, old or new. No expensive changes—you can do the work yourself.

Let us show you why the Louden is the greatest Manure Carrier ever built. An attractively illustrated booklet, showing full details, will be sent, postpaid, upon request.

If you're going to build or remodel a barn, get our 112-page book of barn building information. Explains different methods of framing, types of roofs, concrete work, ventilation, most convenient arrangement—everything. Written for farmers. Sent postpaid—no charge—no obligation. Check and mail the coupon.

WM. LOUDEN
Holds the first patent ever granted by the U. S. Gov't on a Manure Carrier.

Louden Steel Stalls and Stanchions give cows pasture comfort in the barn. Water Bowls increase the milk flow. Manger Divisions, Cupolas, Bull Staff, Hay Unloading Tools, Barn and Garage Door Hangers, Hog House Equipment, "Everything for the Barn." Write for information and prices on any of these articles.

"I SAVED $40.00 BY GETTING A Galloway"
S. C. McCLAIN—NEBRASKA

Thousands of farmers write us on the big savings in dollars and cents they have made by buying a Galloway Cream Separator. Others write of long service, close skimming, ease of cleaning and smooth running. "Used a Galloway 11 years, never cost a cent for repairs," writes J. A. Francis, of Utah. "The Galloway paid for itself the first month," says J. M. Gaddis, of Kansas. "Cream tests 48 to 64 since using a Galloway," writes Mrs. E. B. Burgess, of Oklahoma.

The Galloway Cream Separator Leads the World—has features of construction, unequalled by others, that give longer service, easier, more economical operation and closer skimming. Test a Galloway on your own farm 90 days. Use it. Compare its results. If it does not come up to all our claims, ship it back at our expense. If you like it, keep it, and pay for it on easy terms. Get all the facts about its low-speed bowl, gears in bath of oil, and other special Galloway features.

Feeding for Strong Chicks

I have a flock of 350 chickens which includes about 100 good hens. Will you tell me how to feed them so that their eggs will produce good strong chicks? I now feed a mash containing one part bran, one part middlings, one part beef scrap, one part ground oats and one part corn meal. With this is mixed charcoal and salt. For green feed I give the birds cabbage, beets or rutabagas once a day. I have a five-year-old roosters and some younger ones. How many do I need in my flock?—J. T., Lackawanna County, Pa.

Your feeding ration is good. Plenty of green feed and sour milk seem to help in producing strong chicks. One way is to separate the hens from the pullets. Feed the pullets for winter eggs and allow the hens to rest during the winter by omitting the meat scrap from the mash. Use the hen's eggs for hatching.

As it is near hatching season you have probably done all you can in the way of feeding to help the hens produce strong chicks.

Mating Light and Heavy Breeds

The heavy breeds are usually mated in a ration of about one to ten. Leghorns do well with a one to fifteen ratio. Much depends on the individual birds as they vary in vigor. On free range a male will often produce satisfactory results with a larger number of hens. A five-year-old cock bird is not apt to be satisfactory. Poultrymen usually obtain the best results with vigorous cockerels.

It is approaching the time when all birds that have been wintered are apt to lay enough eggs to help pay their board, so culling at this season is not practical except to remove birds lacking in type. Of course it pays to select the best for breeders according to the rules laid down for such selection.—R. G. Kirby.

To Raise Pekin Ducks

Does it pay to raise ducks and buy feed for them at the present price of grain? I would like to raise some of the large white Pekin ducks another summer. What would be best to feed them from the time they are little ducklings till they are ready for market? And which would pay the best to buy, two old ducks and a drake to hatch from, or buy the ducklings ready hatched? Is it necessary they should have a pond of water?—A. E., Bradford County, Pa.

If you buy all the feed it is quite expensive to raise large flocks of ducks at present grain prices. Much depends on the quality of the range. A pond or lake is not necessary for duck raising but it is useful because of the large amount of green feed and insect life suitable for ducks which will be found near the water. Ducks are grain eaters and need a lot of mash for rapid development. Their digestive tract is not like a chicken's and they can handle ground grains much better than whole grains.

Equal parts of rolled oats and bread crumbs with a sprinkling of about three per cent sand is a good starting feed for ducklings. After three days use equal parts of bran, rolled oats, corn meal and bread. At the beginning of the second week use 3 parts bran, 1 part corn meal, 1 part low grade flour. Also add 10 per cent green feed, 5 per cent meat scrap and the 3 per cent sand. Make the feed into a crumbly mash. Do not use a sloppy mash.

A fattening ration frequently recommended consists of 3 parts corn meal, 1 part bran, 1 part low-grade flour and 5 per cent meat scrap. Green feed and grit are also supplied.

Duck raising requires some skill and it is best to start on a small scale. Then you can work up your own formulas depending on the range and the feeds you have available. The purchase of either grown stock or ducklings depends entirely on personal preference. If you buy a first class mature trio you can see immediately the type of bird you are apt to raise. You will also receive experience in managing the old birds and incubating the eggs. The purchase of a few ducklings might be the cheapest way to develop a flock of breeders.—R. G. Kirby.

Treatment for Turkey

What is the matter with my turkey hen? She eats and is in fine shape, but she rattles in her throat, chokes as if she had a bad cold. There is no discharge, her eyes are bright. I give her turpentine and caster oil, also crushed raw onions, but she is no better. I have her on the barn floor now. She did roost with the chickens. She was that way last summer for eight or ten weeks, then she got all right. She was a year old last July and laid 120 eggs last summer. I would like to save her if I can.—Mrs. S. B., Centre County, Pa.

Possibly the turkey hen has a bit or foreign material lodged in the throat or a yellow cheesy canker has formed around the entrance to the windpipe. Have a helper hold the bird, open the bill wire and look down in the throat as far as possible. If an obstruction is noted in can be dislodged with a piece of twig sharpened like a chisel. This can be used to pick off canker. Then touch the inflamed spots lightly with iodine.

Bronchial troubles in fowls are often difficult to treat and again they cure themselves in a few days. When turkeys roost with chickens it often increases the turkey losses because they are subject to most of the troubles of the chickens. If the turkey is in good flesh and has a good appetite she will doubtless improve with the arrival of more sunshine and a few spring days.—R. G. Kirby.

Laying Contest for Penna.

CONSIDERABLE interest has been aroused among the poultrymen of Pennsylvania concerning the establishment of an egg-laying contest at the Pennsylvania State College. Poultrymen are so enthused about the proposition that many of them have already offered to donate the necessary money to construct the pens and buildings needed.

Egg-laying contests, similar to the one planned for Pennsylvania, have been held in many states and have met with great success.

Poultrymen who are interested in the proposed contest met at Harrisburg during the Farm Products Show and discussed tentative plans with members of the poultry department of the Pennsylvania State College. It is hoped that definite arrangements will be completed so that the contest can be started on November 1, 1925, with 100 pens entered.—A. L. Beam.

Better Work Bigger Crops

Reversible gangs and cutlery steel disks with edges forged sharp are only two of the many valuable features found in the

Clark "CUTAWAY" SINGLE ACTION HARROW

Let us tell you what the others are. Our complete catalog illustrates and describes this and other CLARK "CUTAWAY" Disk Implements. They include Double Action Tractor and Horse Drawn Harrows; Orchard Harrows; California Orchard Plows; Bush and Bog Plows for subduing rough land; Right Lap Plows for fallow land plowing; Grove Harrows; One Horse Disk Harrows, etc.

With our complete catalog we will send you our valuable free book, "The Soil and Its Tillage." Write for both books today.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I have been reading the Young People's Forum for about two years and every time I read it I get more interested.

I have a pet dog and his name is Pup. When I get wood in he will carry a piece and drop it on the porch. Then he will come back and meet me and shake his tail as much as to say, "I beat you."—Catherine Kittner, Wayne County, Pa.

Dear Cousin Ruth:—School opened today after the holiday vacation. I attend Mt. Fern School. I am in the fourth grade. We had an entertainment at the schoolhouse before Christmas. The name of my piece was "Welcome."

New Year's day was my birthday. I was nine years old. I received a book, and a crossword puzzle book and several other things. Santa Claus brought me a doll that walks, talks and sleeps. She has brown hair and her eyes are blue. She is over twenty-five inches high. I have named her Virginia.—Eleanor Baird, Morris County, N. J.

Dear Cousin Ruth and Forum Friends:—I enjoy reading the Forum page and I thought I would try a letter. I am eleven years old and in the sixth grade at school. Here is a little poem I composed about my dog:

I've got a little dog.
His name is Teddy boy.
And when I met him on the street
His heart was full of joy.

We'd scamper and we'd jump
And we had lots of fun.
But when I took him home
Mother said he was a very little one.

Once, he was very sick
And I was sorry for that.
But when he got better
He slept on the parlor mat.
Richard Wagner, Erie County, Pa.

Howdy, Forum readers and faithful Cousin Ruth. May I step into your happy circle long enough to tell you a story which I wrote during my leisure time in school? It is entitled

THREE BOYS AND A DOG

One day, while Philip was at the seashore, he found his cousin, Walter, and his friend, Dave, playing on the beach. With them was Trixey, Walter's dog, who seemed quite tired out, as he had been swimming in the surf and going after sticks that Dave threw into the water.

Walter was afraid to let him go again, but Dave kept him going until the poor little animal was fairly trembling with cold and fatigue. As he came dragging his stick up the sand and laid it at Walter's feet the little master hugged him and said, "There, now; that's enough. You shan't go any more."

"Oh, brother! What a silly boy you are! It won't hurt him any. What are you afraid of?" scolded Dave.

"Don't send him again. It's cruel to urge him when he doesn't want to go," said Phil.

"Oh, go on! Don't you be so wise!" sneered Dave. "There, Trixey, just once more! Good dog! Go on, now!" and he flung the stick far out into the surf. Quick as thought the little spaniel was plunging after it.

"Don't let him go! He's too tired, and I'm afraid the surf is too strong for him," pleaded Walter.

"Oh, Trixey, come back!" he called, and the faithful little creature, obedient to his master, turned and started for the shore.

"He shan't come back! I am going to make him get that stick. Go on, there!" shouted Dave, throwing a stone after the dog.

His aim was only too true. The stone hit the struggling creature on the head, and he disappeared under the water, and the strong current from the shore carried him out to sea.

Now, what do you think of that? Maybe I'll get time to write another story soon if you really enjoyed this one.—Esther McKee, Mifflin County, Pa.

We like the story but don't neglect your school work to write another! Be sure to get your lessons done first.
COUSIN RUTH.

Dear Forum Friends:—May I join your happy circle? I am a girl eleven years old and live on a farm near a mountain. We have a Shetland pony, his name is Prince. My sister, brother and I raised eight Holstein heifers last year. My brother's are a pair of twin heifers. We have nine horses. Viola Smith is my school mate who's picture was in the Y. P. F. page last week. I have three-quarters of a mile to go to school. Our teacher is Miss Myrtle Smith. She is a good teacher and we like her very much. I have two brothers and one sister. One of my brothers, nineteen years old, is at State College high school. He is a senior and captain of the football team. I read Pennsylvania Farmer thru every week. I am sending some riddles; here they come:

1. As I was going thru the wheat
I picked up something good to eat
'Twas neither flesh nor fruit nor bone
I took it home and kept it till it ran alone.

2. What is as high as a house and low as a mouse, bitter as gall, sweet for all?

3. As I was going thru the garden I met Dick Redcoat with a stone in his stomach and a stick in his throat.—Augusta Catherine McAlevy, Huntingdon County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading your Forum letters for some time and surely do like to read them so I I thought I would write one.

I am a little girl eleven years old and live about one-half a mile from school. I did not miss a day last winter nor so far this winter. When the snow is deep brother takes me on mule back or sled. I go to Sunday school, too.

I don't have very much time to play. I have five dolls but I don't play with them. I got a certificate of perfect attendance last winter with a gold star on it and expect to get another one this winter.—Della Laverne Shaw, Fulton County, Pa.

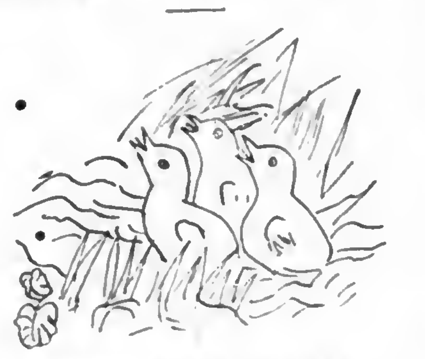
Dear Cousin Ruth and Forum Friends:—This is my first letter and I hope it is not my last. I am a boy twelve years of age and am in the fifth grade. I have three brothers and two sisters. I go to White School which is Fitchfield Township. There are nineteen in our school. I live the closest to school so I do not have to go far. I live on a farm of 120 acres. We have two horses, one cow and thirty-two chickens.

For pets I have two dogs and one cat. One dog is brown and the other is brown and black. The brown one got his leg broken but it is getting better now.

That is all the news this time for my letters is long enough. Best wishes to Cousin Ruth.—William Fairlie, Bradford County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve years old and am in the seventh grade at school. I will tell you about my pet squirrel. We found it in the road one day when papa was cutting down a tree. My two brothers and I brought it into the house and gave it to a mother cat that had two kittens. The squirrel stayed with us until it was grown up. Then it went to the woods. It would eat apples, corn, wheat, and nuts of any kind. When it was little the mother cat would give it its bath and it would get its meals with the kittens.

Our best pet now is a pony. It is brown and white. We have a wagon and a set of harness for him. His name is Jack.—Ruth Crowl, Chester County, Pa.



WAITING FOR DINNER
Anna Marie Sinemus, Westmoreland Co., Pa.

Dear Cousin Ruth and Forum Friends:—How are you? The snow is beautiful here. It has covered trees and everything. Of course it isn't over the trees. I have seen only one sleigh out this winter. I had my picture taken in the snow with my dog and a friend from New York City.

I guess the little birds are shut up for the winter. I do love birds and can hardly wait till spring comes so I can hear them sing. I do love the country in the summer. The skating is good now.

Dear Cousin Ruth, may I send in a story that I made up? My parents think Pennsylvania Farmer is getting better every day. I am reading the story of The Light in the Clearing, it is good. Well, I must close, wishing every one a happy new year.—Ellen Shirley Pulis, Passaic County, N. J.

Dear Cousin Ruth:—We have been getting Pennsylvania Farmer for a year and I always read the Young People's Forum page and I find some nice letters. I often thought I would like to write a letter but never did. I am twelve years old and live on a small farm of about six acres. I feed two little pigs every day for my mother. I have a little dog, his n is Nip, and a cat whose name Tabby. I have six brothers and sisters. I got a new baby bro January 10. His name is Stokley Clain Smith. I go to Pigeon W School. I can ride on my sled school clear to my home. The li town I live in is called Coaltown, has about eighteen houses in it.

I am writing these few lines to you know I enjoy reading the F friends' letters, also Cousin Ruth's wish to be a member.—Kenneth Smith, Butler County, Pa.

Dear Cousin Ruth and Fo Friends:—I am a boy of four years and have no brothers nor ters. I live on a big farm cont ing 129 acres. We keep 250 ch ens, five geese, three rabbits, pigs, one horse and two cows. my pets I have one puppy n Sandy and three cats.

I have to walk one and one mile to school every day. I am the seventh grade.

I like the Forum page very m I would like to see some more and girls join our Forum page. would be very glad to have so m children that we could publish a per for ourselves.

Well, I will now close for I no more to say. Good-bye.— Rausch, Ulster County, N. Y.

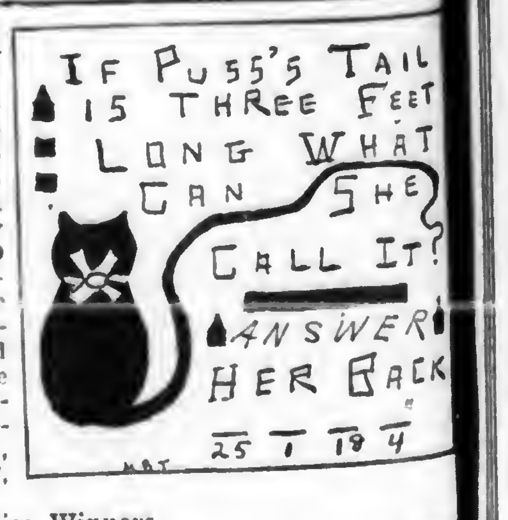
OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—You can find out what puss could call her tail by letting the numbers you see at the bottom of the picture stand for letters of the alphabet,—the figure one will stand for the letter "A.", two for "B", and so on. When you have found the answer send it to me on a POSTCARD not later than February 7. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 259-263 SOUTH THIRD STREET, PHILADELPHIA.



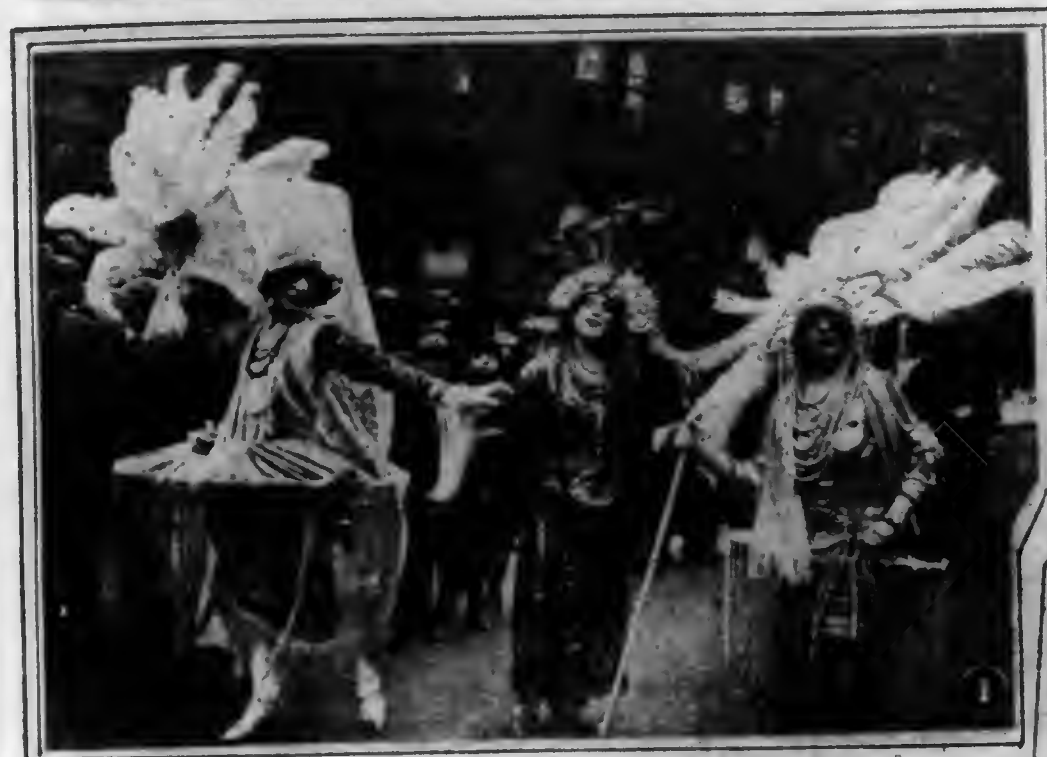
IF PUSS'S TAIL IS THREE FEET LONG WHAT CAN SHE CALL IT?
ANSWER HER BACK
25 1 18 4

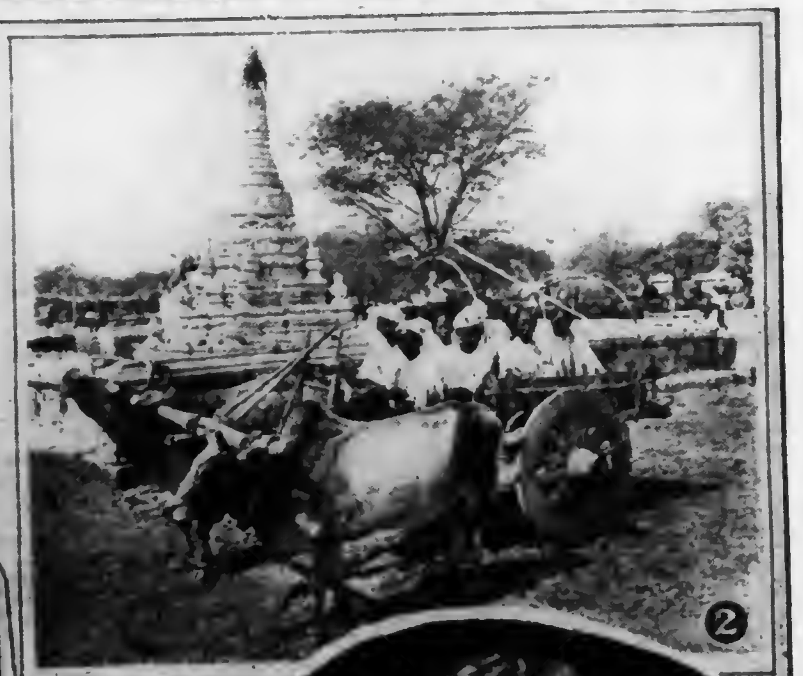
Puzzle Prize Winners

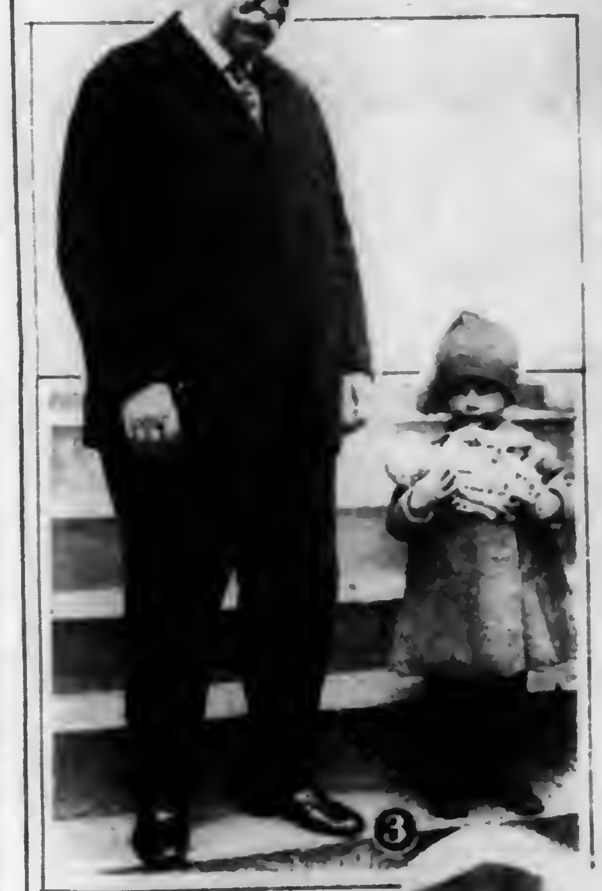
The answer to the puzzle published in the January 10 issue of Pennsylvania Farmer is: UNREASONABLE.

The prize winners are: Mary Garron, age 12, Indian Mills, N. J.; Arline Haver Gray, age 11, Lebanon, N. J.; Elizabeth Kirkner, age 1 Malvern, Pa.; Alex E. Laughlin, age 13, New Alexandria, Pa.; Amy M Myers, age 12, Clinton, N. Y.; Margaret Park, age 12, West Berlin, N. J.; Elizabeth Minnesota Somers, age 14, Denton, Md.; Rhea Walling age 1 Phalanx, N. J.

PASSING EVENTS IN PICTURES







(Copyright by Underwood & Underwood)

1.—"Lovely" young Philadelphians—of the sterner sex, however,—taking part in the annual Mummers' parade on New Year's Day.

2.—Primitive travel—but time does not seem to be money to these Buddists of Burmah. In their springless ox-cart they are journeying to one of their many temples.

3.—Our only ex-president, Chief Justice Taft, is proud to pose with his little granddaughter, Helen Manning, and her dolly daughter.

4.—The little specks are skaters on the reflecting pool near the Lincoln Memorial at Washington, D. C.

5.—The very attractive dagher of Representative E. L. Davis, of Tennessee,—a leader amongst the young congressional set in the capital.

6.—An argument in the Lions family as to which shall hold—not the purse strings—but the perch of honor.

7.—After Wellesley had beaten the other women's colleges and Yale had won over the men's, the two teams engaged in a cross-word race, with Yale as the final victor. Does this prove the male of the species more wordy than the female?

Many Doings Next Month

Three Celebrations the Children Will All Enjoy

THE February sales are no doubt vastly important, but let us not get so excited over them that we forget that shortest month contains: the three holidays, each of them vastly more important than "Dollar day" or "Bargain day" or any other day that gets a full page in the advertising section of the paper.

Abe Lincoln First

While the 12th of February may find the children pretty busy making or buying valentines to be used two days later, they will be glad, nevertheless to stop a while on that day and hear about Abe Lincoln, the rail-splitter; the "great commoner" who reached the top round in the ladder of fame and honor entirely thru his own efforts; who in all his greatness continued to be one of the common people in spirit and in sympathy, the American of all others whom everyone loves.

Why will the children enjoy hearing about him? Because his story is so interesting that it never loses its appeal. Probably every child of school age will get it in the schoolroom, but don't depend entirely upon that. It won't do any harm if he gets his teacher's story and yours too.

It isn't a bad idea to get a little log cabin paper and let the children make a small log cabin and a half-faced camp and as many other things connected with Lincoln's childhood as it is convenient to copy, just by way of impressing these things on the children's minds. They will enjoy the work and so will you when once it is in progress.

Saint Valentine's Day

Probably the 14th is more universally enjoyed than either the 12th or 22d, altho each has its place in the heart of any normal child. Let the little folks send their friends a valentine greeting, whether it be an elaborate gilt and lace affair or just a post card. The latter will do just as well, and often gives just as much pleasure.

Tell the children why we send these greetings and, if possible, read them the story of Saint Valentine. Sentimental? No doubt. This world is a much better place in which to live than it would be with the sentiment eliminated. Don't mistake sentiment for silliness. A big boy of fifteen making a pretty valentine to please a little lad of six, is showing sentiment; he is not silly. The more such sentiment we have, the better.

Washington's Birthday

The last holiday, the birthday of our great Washington, is one the children always like, too. This time a popular amusement is to mould hatchets, cherries, etc., from good modeling material. All little folks like to fuss with clay, and with a little practice they can make surprisingly good imitations of historical scenes and their accessories. They will like to draw Washington's cherry tree and copy sprays of cherries. When the drawing is finished, let them color it with crayons.

For a February 22 party, sprays of cherries and cherry leaves cut from red and green crepe paper make pretty table decorations. Tiny baskets of candied cherries are ideal for favors and both are easily made at home. Children seldom reach school age without knowing Washington stories, but if they don't know any, tell them some. They will enjoy the holiday far better for knowing what it commemorates.—E. M. A.

Your Address, Please

SEVERAL weeks ago a letter reached us asking that we publish an answer to it in that week's paper. This is impossible. Getting out a paper means many days' work. Fitting all the articles into a page is like the old-time jig-saw puzzle. The pieces don't always fit. Maybe they have to wait a week or even longer, before a place of just the right size is found for them. So allow at least three weeks for anything you send to appear in print.

You can always get an immediate answer by sending a stamped addressed envelope. But we can't send answers if we don't know your address. A letter is lying unanswered this minute because the writer didn't tell where she lives.—I. S. H.

Mother's Health First

MOTHER cannot take her rightful place in the home and community if she is not well physically, and furthermore a child is distinctly handicapped that grows up in a home where the mother is a semi-invalid, at least a part of the time.

It is easy for mothers to forget themselves in their zeal to look after the rest of the family—but mother's well-being physically is one of the fundamentals of a well balanced home.

How about physical handicaps? Are you laboring under a physical handicap year in and year out that could be remedied?

It is the part of wisdom to go to a reliable physician at least once a year and have a careful physical examination. If you fear you have abscessed teeth by all means have them X-rayed and attended to. Is your blood pressure high? There is but one way to find out and it is worth the fee the doctor charges to be sure.

No mother can do justice to her family if she is laboring under physical handicaps. These should be corrected before they have gone too far. —M. H. M.

Keep Lights Shining

ON THESE long evenings we love to gather 'round the lamp and visit or read. Each of us has a favorite magazine or paper. So one of the things I do at stated intervals to insure everyone's comfort is to assemble all lamps, big and little, on the kitchen table and give them a thoro going over, so that they will give a good clear light.

I remove the burners and boil them in a solution of water and sal soda. While they boil, I empty the lamps and give them a good soapsud bath, then wipe them and place them near the stove where they will dry perfectly.

Usually I do this job in the morning. In the afternoon I put a new wick into each burner that needs it, and fill the lamps with clean kerosene. Then I put on clean chimneys and shades, and lo, what a beautiful clear light!

Lanterns and Stoves, Too

I treat all lanterns and also my oil heater the same way. By doing this early in the fall, I have a clear light and better heat with less burning of oil.

Of course a great many farmers who rent, or are living in villages, have electric or acetylene light. But there are more who, like myself, burn coal oil. There is no need of smoky ill-smelling lamps if my method is used frequently. Dust accumulates in kerosene lamps, filling and clogging wicks and burners. If they are kept clean, a good light is the result.

I use No. 2 burners for kitchen and dining-room, No. 1 for bed rooms and a large burner for reading lamps.

We each have a flashlight for emergency use at night.—Mrs. E. A. K.

JUST COMMON FOLKS

It's Easier to Work Than to Get Out of It

BETWEEN the rich aristocrats who do not work, and the poor aristocrats who will do but little (giving poor service for big wages) where do we common people come in?

"I won't do that work," is often heard in disdainful tones from husky individuals. A relative of mine once said in reply to such a statement,

"I'm neither rich enough nor poor enough to choose my work." She was at the head of a household and did the work that duty required, let it be clean or dirty.

And I guess that is the way with most of us who strive to get on in the world. We have to do what comes along, be it congenial or otherwise. A person who wishes to help upbuild the community will find many, many things to do with no salary attached. It takes a strict sense of economy (in the best meaning of that word) to select the vital things, and not fritter one's self away on the others. But no one succeeds by side-stepping labor.

Easier to Do Something

Some folks work harder trying to evade work than they would to go at it and do something. And it is not only the idle rich who do this. It may be someone who sorely needs to earn a living. Brought up, perhaps in shiftless poverty, neglecting buttons and patches, failing to harvest fruit, generally wasting their substance; they now expect sympathetic people to supply their deficiencies. It becomes tiresome to try and help people who cannot seem to help themselves. Must we common folks do the work that the aristocrats are either too rich or too poor to do?—Claribel Maye.

Sweet Potato Ways

SWEET POTATOES IN BACON

Peel medium sized potatoes and cook in salted water till tender. Remove to a shallow pan, sprinkle with sugar and dot with butter. Put a little water in the bottom of the pan and bake twenty minutes. Then remove from the oven, wrap each potato in a slice of bacon, fasten in place with a toothpick, and return to the oven till the bacon browns.

• • •

GEORGIA SWEET POTATOES

Cut cold boiled sweet potatoes in half-inch slices. Arrange in layers in a buttered baking dish with a dusting of brown sugar, dots of butter and a little salt and pepper between the layers. When the dish is filled, pour in one cupful of hot water and cook in a hot oven till brown over the top.—L. M. T.

Hints Tried and True

DRY cleaning the nickel on your stove and the zinc under it with finely sifted coal ashes. They will remove all grease and grime. Then polish with a cloth wet with kerosene, and your metal will look like new.

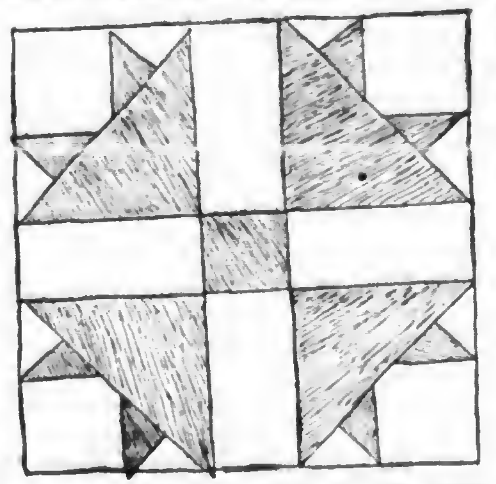
• • •

If eggs are first wet with cold water, the shells will not crack when put into boiling water to cook.—I. M. R.

About Your Quilt Patterns

Reader's Request Brought Out a Quick Response

SOME time ago one of our readers sent in a request for quilt patterns. She asked for four. Another reader kindly sent five patterns which had come to her from her grandmother. Still another reader offered to share from her stock of one hundred, and requested that the first writer be asked to communicate directly with her.



It looks as if a sure-enough readers' exchange had been started, doesn't it?

As it seems impossible to bring about a personal get-togehter between all the quilt-makers who long for new patterns, and all those who have patterns to spare, some designs will appear from time to time on our page.

The first of these,shown this week is to be made in two colors. The square in the center, and the triangular pieces that radiate out from the four corners, are made of an all over pattern of green. The other pieces are made of a pink-and-white figured material. The central square measures two inches (this does not allow for seams), and the whole block is ten inches square.—I. S. H.

When Somebody Calls "Fire!"

Preparedness Means a Cool Head When Most Needed

WITH some handy apparatus one man can do more in five minutes toward checking a fire than one hundred men can do a half hour later, especially if nothing is in readiness. Therefore, everyone should determine on a plan of firefighting, should occasion arise, and should construct a system to suit individual requirements. If this is done, nine times out of ten the fire may be extinguished before any but minor damage is done.

To begin with there should be as many extension ladders as there are large buildings. Attach one to the outside of the house, and if there are one or more barns, hang one from hooks in each driveway. Behind each ladder hang two heavy beaters made from grain sacks fastened securely to old broom handles. These, when wet, are far better to stifle flames than buckets of water. Short pieces of rope should be fastened around the ladders so they can be quickly lashed to a beam or rafter.

Practice Necessary

After the ladders are ready for use, every man on the place should practice using them, grabbing them from the hooks, adjusting the extensions and erecting them against the gables. The men should time themselves until they can accomplish the stunt in the time required of city firemen. They should also practise tying the ropes and using the beaters.

There should be trap-doors thru every floor and partition where there are no other doors, both in barns and house. A few years ago there was a fire on my roof caused from sparks from a burning chimney. A roof had been built over the old roof, and to reach this, which was on fire, men had to go up two and one-half flights of stairs and chop a hole thru the inside roof. It was a chance in a million that the house was saved.

In the barn, along the purlin plates nail a few cleats to enable anyone to climb from one end of the frame to the other. In the house carry out the same plan, making the garret and offsets easily accessible. Provide the chimney casing with a sliding door, so that it can be examined quickly.

System of Fire-fighting

When a fire starts in any place, get into action quickly. Let there be no confusion over what to do first. There will be no frantic search for a ladder, rope or buckets (the latter should be near the water supply and never allowed under any circumstances to be used for anything else.

If a blaze starts in a mow, stack or stable, or about the house, press a blanket over the place, if possible, to exclude the air. This is the main idea in a smouldering fire. When the blaze breaks thru, use the beaters. If the blaze is in the roof, bring the ladders into position and apply the beaters. It can be done in less time than when water is used.

Not all fires can be handled in this way but the majority can either be stifled or held in control until further assistance arrives. Let some member of the family put in a call for the neighbors and the nearest municipal fire department, but above all get busy yourself—and above all else don't lose your head.

A Home Made Sprayer

Every person keeping house should own a knapsack sprayer. The following is a recipe for the chemical to use in it for fire. The mixture may also be put in glass bottles and if a fire starts the bottles may be broken over the flames or the contents poured over them.

Two pounds of common salt, ten pounds of sal ammoniac (chloride of ammonia). Dissolve in seven gallons of water. If bottles are used, select thin ones that will smash easily.—A. G.

NO LOAFING HERE

Kept in Repair This Bread Mixer Works Full Time

SOME one suggests that many bread-mixers lead a life of idleness, that their owners do not use them. Perhaps they don't, but I use mine every time I bake bread, and it hardly seems as if I could bake now without it. I believe that if I didn't have it, I should buy my bread, as most of my neighbors do, until I could afford another.

Yes, it needs lard on all its joints while in use, but so does any machine. I know some people never use any, but I also know farmers who seldom if ever oil a mowing machine or a lawn mower, and I find that they don't use the same one very long.

Takes More Than Hand Power

The bread mixer certainly makes better bread than I can make without it, because my wrists are not strong enough to give the dough the required kneading by hand.

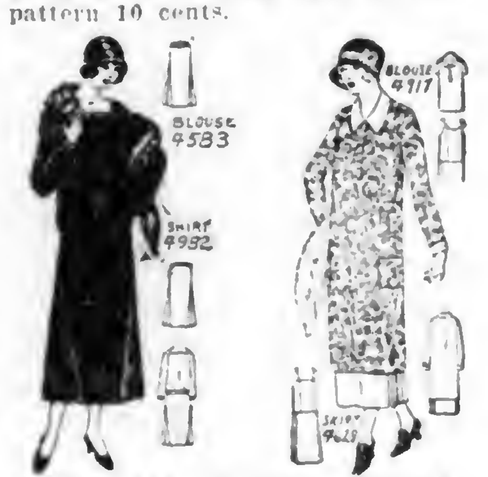
Sometimes when I want a few buns or sweet rolls or other unusual breads, I take out sponge for them in a large mixing bowl, and this must be handled by hand, because the mixer is full of loaf bread. Being small in quantity, I can manage it all right, but it never has as nice a texture as the loaves unless I make the sweet dough alone and use the mixer for it.

One "kink" I have discovered is that after the bread is kneaded into a nice stiff loaf in the bread mixer, it is time to leave it. More kneading, after it has had enough, has a tendency to toughen it.—E. M. A.

Time to Think of New Things

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S Third Street, Philadelphia, Pa.

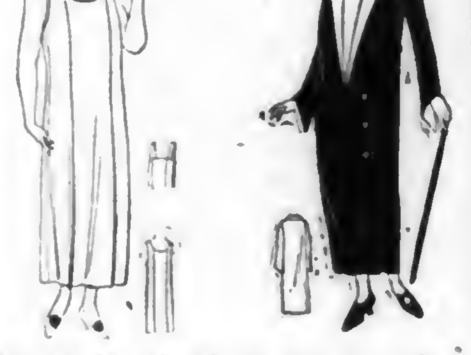
4583-4982.—A Pretty Afternoon Frock.—Figured or embroidered crepe with bands of contrasting silk, or embroidery could be used for this model. In satin faced crepe the godets could be of the reversed side of the crepe and the trimming could be corded piping of the material. The blouse, 4583, is in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt is in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure, with corresponding hip measure, 35, 37, 39, 41, 43, 45 and 47 inches. Width of the skirt at the foot is 2¾ yards. To make this dress for a 38-inch bust will require 4¾ yards of 40-inch material. Each pattern 10 cents.



4917-4628.—Fashion's Favorite.—The tunic blouse is smartly illustrat- 4917 together with bodice skirt 4628. The blouse may be of figured silk, of alpaca or wool crepe. The skirt of contrasting or self material. The blouse is in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 3½ yards of 40-inch material. The bodice skirt is in four sizes: small, 34-36; medium, 38-40; large, 42-44 extra large, 46-48 inches bust measure. A medium size requires 4⅛ yards of 40-inch material. If bodice is made of lining or other contrasting material 1 yard 32 inches wide is required. Width of skirt at the foot, with plaits extended is 2⅜ yards. Each pattern 10 cents.

4723.—The Practical Slip.—Sateen, long cloth, nainsook, silk or crepe may be used for this design. It is suitable for slender and stout figures. Additional width is provided by plait fulness below the hips. Four sizes: small, 34-36; medium 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3½ yards of 36-inch material. The width at the foot with plaits extended is 2¼ yards. Pattern, 10 cents.

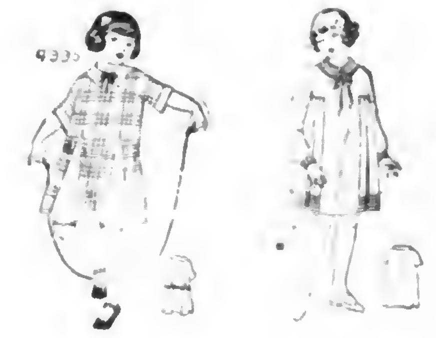
4983.—A Stylish Design.—Faille broadcloth or satin as well as crepe and crepe satin would be suitable for this model. Eight sizes: bust measure, 40, 42, 44, 46, 48, 50, 52 and 54 inches, and waist measure, 33,



35, 37, 39, 41, 43, 45 and 47 inches. A 42-inch size (bust measure) requires 4½ yards of 40-inch material, with five-eighths yard of contrasting material for facings and collar, cut crosswise. The width of the dress at the foot is 1⅝ yard. Pattern, 10 cents.

4995.—For the Little Miss.—The "godet," a new style feature, is effectively displayed in this pretty model. Four sizes: 4, 6, 8 and 10 years. A six-year size requires 1⅝ yard of 36-inch plaid or figured material and seven-eighths yard of plain, if made as illustrated. To make of one material reequires 2½ yards. Pattern, 10 cents.

4994.—School Dress.—Wool rep in brown, and checked woolen are here combined. This style is good for gingham and linen, or pongee with facings in a contrasting color. The sleeve may be finished short, or with the long bishop portion. Four sizes:



4, 6, 8 and 10 years. A six-year size requires 2 yards 36 inches wide if made of one material and with long sleeves. With short sleeves three-eighths yard less is required. Collar, cuffs and facings of contrasting material will require three-eighths yard 36 inches wide.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft white light, even better than gas or electricity, has been tested by the U. S, Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, **J. O. Johnson, 642 N. Broad St., Philadelphia,** is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

4 Lace Curtains GIVEN

really given away free to you, for selling only 40 packs vegetable and flower seeds at 10c large pack. Or this handsomely decorated Colonial Style 31 pc. Blue Bird Dinner Set given according to startling offer in our catalog. Similar to sets retailing at $10. Send today. Easily sold. Earn big money or premiums. Send no money. We trust you with seeds until sold. American Seed Co., Box E 192, Lancaster, Pa.

Save 10c a lb On this Super-Quality Gillies Broken Coffee 49c lb

In 5 lb. Lots or More BEAN or GROUND DELIVERED FREE Within 300 Miles

Try it for a real treat. Its price is low considering its rare richness and superb cup quality. Composed of small and broken beans of extra selected, high grade coffees.

SHIPPED DAY OF ROASTING Direct from Wholesale Headquarters SATISFACTION GUARANTEED OR MONEY BACK *Send Check, Cash or Money Order or Pay Postman on receipt of coffee*

GILLIES COFFEE CO. 233-9 Washington St. New York City *Established 85 Years*

GIVEN YOUR CHOICE SEND NO MONEY

Latest Style jeweled wrist watches, guaranteed time keepers, Given for selling our large packets vegetable seeds, 10c each according to our plan. Send for 40 pkts. today. Easily Sold. Earn big money or gifts. AMERICAN SEED CO. Box C-192 Lancaster, Pa. WE TRUST YOU

BREED CANARIES AT HOME

A [illegible] and fascinating pastime OUTFIT COMPLETE only $12. Includes pair of selected HARTZ MOUNTAIN birds—breeding cage, nest and nestings and full instructions on how to raise canaries. Birds shipped safely anywhere. Send for price list of other pets. Book on Home Pets and How to care for them 10c.

BARTEL'S, Dept. "O" 45 Cortlandt Street, New York

GOLDEN CHAMPLAIN CANTALOUPE

Paid good profits in 1921; others failed entirely. This sure-crop melon leads in combination of earliness, hardiness, quality and yield. Free illustrated [illegible] gives proofs by growers from all states. Our methods take the risk from melon growing; let us help you as we have thousands of others. Write now mentioning this paper, to the Originators of the earliest (57 day) cantaloupe. H. J. WALRATH & SONS. R. D. No. 1, Conneaut, Ohio.

FREE SAMPLES CLOVER

For your test and approval. We want you to see our high-testing seeds and our low prices before you buy seeds anywhere.

Buy Now at Wholesale. Crop Short. We expect higher prices later. We bought early big stocks in lower markets. Our prices amazingly low. We can save you money on Clover, Alfalfa, Timothy, Sweet Clover, Hubam and other Field Seeds. Write today for free samples and big Seed Guide. American Field Seed Co. Dept. 832 Chicago, Illinois

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

WE ALWAYS thank God for men like Purvis: we never thank them. They are without honor in their own time, but how they brighten the pages of memory! How they stimulated the cheerfulness of the old countryside and broke up its natural reticence!

Mr. Franklin Purvis was our hired man—an undersized bachelor. He had a Roman nose, a face so slim that it would command interest and attention in any company, and a serious look enhanced by a bristling mustache and a retreating chin. At first and on account of his size I had no very high opinion of Mr. Purvis. The first evening after his arrival I sat with him on the porch surveying him inside and out.

"You don't look very stout," I said.

"I ain't as big as some, but I'm all gristle from my head to my heels, inside an' out," he answered.

I surveyed him again as he sat looking at the ledges. He was not more than a head taller than I, but if he were "all gristle" he might be entitled to respect and I was glad to learn of his hidden resources—glad and a bit apprehensive as they began to develop.

"I'm as full o' gristle as a goose's leg," he went on. "God never made a man who could do more damage when he lets go of himself an' do it faster. There ain't no use o' talkin'."

There being no use of talking, our new hired man continued to talk while I listened with breathless interest and growing respect.

"You'll find me wide awake, I guess. I ain't afraid o' anythin' but lightnin'—no, sir!—an' I can hurt hard an' do it rapid when I begin, but I can be jest as harmless as a kitten. There ain't no man that can be more harmlesser when he wants to be an' there's any decent chance for it—none whatsomever! No, sir! I'd rather be harmless than not—a good deal."

This relieved, and was no doubt calculated to relieve, a feeling of insecurity which his talk had inspired. He blew out his breath and shifted his quid of tobacco as he sat with his elbows resting on his knees.

"Have you ever hurt anybody?" I asked.

"Several," he answered.

"Did you kill 'em?"

"No, I never let myself go too fur. Bein' so stout, I have to be kind o' careful."

Aunt Deel called us to supper.

"Let's go in an' squench our hunger," Mr. Purvis proposed as he rose and shut his jackknife.

I was very much impressed and called him "Mr. Purvis" after that. I enjoyed and believed many tales of adventure in which he had been the hero as we worked together in the field or stable. I told them to my aunt and uncle one evening whereupon the latter said:

"He's a good man to work, but Jerusalem—!"

HE STOPPED. He always stopped at the brink of every such precipice. I had never heard him finish an uncomplimentary sentence.

I began to have doubts regarding the greatness of our hired man. I still called him "Mr. Purvis," but all my fear of him had vanished.

One day Mr. Grimshaw came out in the field to see my uncle. They walked away to the shade of a tree while "Mr. Purvis" and I went on with the hoeing. I could hear the harsh voice of the [illegible] speaking in loud and angry tones and presently he went away.

"What's the rip?" I asked as my uncle returned looking very sober.

"We won't talk about it now," he answered.

THAT look and the fears it inspired ruined my day which had begun with eager plans for doing and learning. In the candle-light of the evening Uncle Peabody said:

"Grimshaw has demanded his mortgage money an' he wants it in gold coin. We'll have to git it some way, I dunno how."

"W'y of all things!" my aunt exclaimed. "How are we goin' to git all that money—these hard times? ayes! I'd like to know?"

"Well, I can't tell ye," said Uncle Peabody. "I guess he can't forgive us for savin' Rodney Barnes."

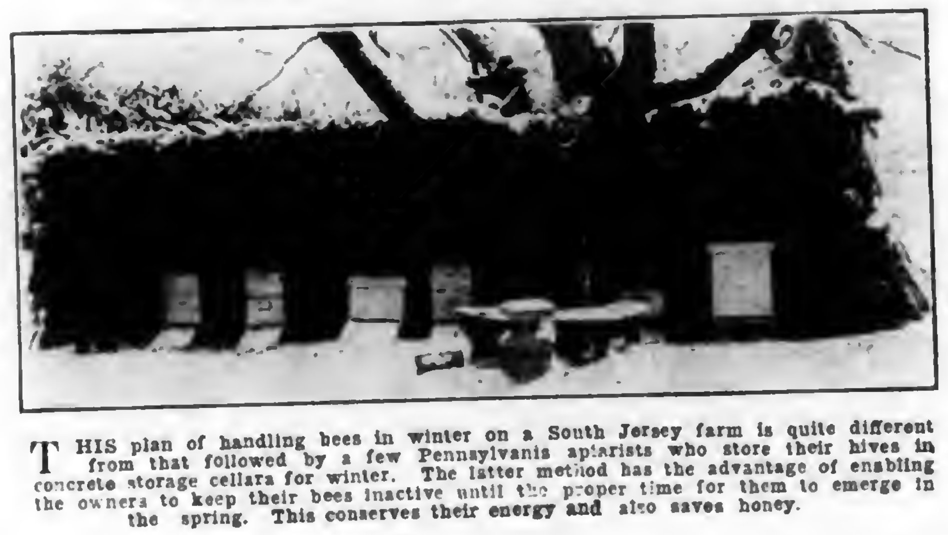
"What did he say?" I asked.

"Why, he says we hadn't no business to hire a man to help us. He says you an' me ought to do all the work here. He thinks I ought to took you out o' school long ago."

"I can stay out o' school and keep on with my lessons," I said.

"Not an' please him. He was mad when he see ye with a book in yer hand out there in the corn field."

Corn Fodder Shelters the Bees



THIS plan of handling bees in winter on a South Jersey farm is quite different from that followed by a few Pennsylvania apiarists who store their hives in concrete storage cellars for winter. The latter method has the advantage of enabling the owners to keep their bees inactive until the proper time for them to emerge in the spring. This conserves their energy and also saves honey.

What were we to do now? I spent the first sad night of my life undoing the plans which had been so dear to me but not so dear as my aunt and uncle. I decided to give all my life and strength to the saving of the farm. I would still try to be great, but not as great as the Senator. Purvis stayed with us thru the summer and fall.

AFTER the crops were in we cut and burned great heaps of timbre and made black salts of the ashes by leaching water thru them and boiling down the lye. We could sell the salts at three dollars and a half a hundred pounds. The three of us working with a team could produce from one hundred and twenty to one hundred and forty pounds a week. Yet we thought it paid—there in Lickityspit. All over the hills men and women were turning their efforts and strength into these slender streams of money forever flowing toward the mortgagee.

Mr. Dunkelberg had seen Benjamin Grimshaw and got him to give us a brief extension. They had let me stay out of school to work. I was nearly thirteen years old and rather strong and capable. I think that I got along in my books about as well as I could have done in our little school.

One day in December of that year, I had my first trial in the full responsibility of man's work. I was allowed to load and harness and hitch up and go to mill without assistance. My uncle and Purvis were busy with the chopping and we were out of flour and meal. It took a lot of them to keep the axes going. So I filled two sacks with corn and two with wheat and put them into the box wagon, for the ground was bare, and hitched up my horses and set out. Aunt Deel took a careful look at the main hitches and gave me many a caution before I drove away. She said it was a shame that I had to be "Grimshawed" into a man's work at my age. But I was elated by my feeling of responsibility. I knew how to handle horses and had driven at the drag and plow and once, alone, to the post-office, but this was my first long trip without company. I had taken my ax and a chain, for one found a tree in the road now and then those days, and had to trim and cut and haul it aside. It was a drive of six miles to the nearest mill, over a bad road. I sat on two cleated boards placed across the box, with a blanket over me and my new overcoat and mittens on, and was very comfortable and happy.

I HAD taken a little of my uncle's chewing tobacco out of its paper lay on a shelf in the cellarway, for I had observed that my uncle generally chewed when he was riding. I tried a little of it and was very sick for a few minutes.

Having recovered, I sang all the songs I knew, which were not many, and repeated the names of the presidents and divided the world into its parts and recited the principal rivers with all the sources and emptyings of the latter and the boundaries of the states and the names and locations of their capitals. It amused me in the midst of my loneliness to keep my tongue busy and I exhausted all my knowledge, which included a number of declamations from the speeches of Otis, Henry and Webster, in the effort. Before the journey was half over I had taken a complete inventory of my mental effects. I repeat that it was amusement—of the only kind available—and not work to me.

I reached the mill safely and before the grain was ground the earth and the sky above it were white with snow driving down in a cold, stiff wind out of the northwest. I loaded my grists and covered them with a blanket and hurried away. The snow came so fast that it almost blinded me. There were times when I could scarcely see the road or the horses. The wind came colder and soon it was hard work to hold the reins and keep my hands from freezing.

SUDDENLY the wheels began jumping over rocks. The horses were in the ditch. I knew that was the matter, for my eyes had been filling with snow and I had had to brush them often. Of course the team had suffered in a like manner. Before I could stop I heard the crack of a felly and a front wheel dropped to its hub. I checked the horses and jumped out and went to their head and cleared their eyes. The snow was up to my knees then.

It seemed as if all the clouds in the sky were falling to the ground and stacking into a great, fleecy cover as dry as chaff.

We were there where the road drops into a rocky hollow near the edge of Butterfield's woods. How the thought of that broken wheel smote me! It was our only heavy wagon, and we having to pay the mortgage. What would my uncle say? The query brought tears to my eyes.

I unhitched and led my horses up into the cover of the pines. How grateful it seemed, for the wind was slack below but howling in the treetops! I knew that I was four miles from home and knew not how I was to get there. Chilled to the bone, I gathered some pitch pine and soon had a fire going with my flint and tinder. I knew that I could mount one of the horses and lead the other and reach home probably. But there was the grist. We needed that; I knew that we should have to go hungry without the grist. It would get wet from above and below if I tried to carry it on the back of a horse. I warmed myself by the fire and hitched my team near it so as to thaw the frost out of their forelocks and eyebrows. I felt in my coat pockets and found a handful of nails—everybody carried nails in one pocket those days—and I remember that my uncle's pockets were a museum of bolts and nuts and screws and washers.

The idea occurred to me that I would make a kind of sled which was called a jumper.

SO I GOT my ax out of the wagon and soon found a couple of small trees with the right crook for the forward runner and cut them and hewed their bottoms as smoothly as I could. Then I made notches in them near the top of their crooks and fitted a stout stick into the notches and secured it with nails driven by the ax-head. Thus I got a hold for my evener. That done, I chopped and hewed an arch to cross the middle of the runners and hold them apart and used all my nails to secure and brace it. I got the two boards which were fastened together and constituted my wagon seat and laid them over the arch and front brace. How to make them fast was my worst problem. I succeeded in splitting a green stick to hold the bolt of the evener just under its head while I heated its lower end in the fire and kept its head cool with snow. With this I burnt a hole in the end of each board and fastened them to the front brace with withes of moosewood.

It was late in the day and there was no time for the slow process of burning more holes, so I notched the other ends of the boards and lashed them to the rear brace with a length of my reins. Then I remembered my bolt and brought up the grist and chain and fastened the latter between the boards in the middle of the front brace, hitched my team to the chain and set out again, sitting on the bags.

It was, of course, a difficult journey, for my jumper was narrow. The snow heaped up beneath me [illegible] and then I and my load were roll[illegible] off the jumper. When the drifts were more than leg deep I let d[illegible] fence and got around them by [illegible] into the fields. Often I stop[illegible] to clear the eyes of the horses—a [illegible] task to be done with the bare [illegible]—or to fling my palms again[illegible] my shoulders and thus warm my[illegible] a little.

It was pitch dark and I should not have known the turn when we came to it, but a horse knows more than a man in the dark. Soon I heard a loud haloo and knew that it was the voice of Uncle Peabody.

"Thank God I've found ye!" he shouted. "I'm blind and tired out and I couldn't keep a lantern goin' to save me. Are ye froze?"

"I'm all right, but these horses awful tired. Had to let 'em t every few minutes."

told him about the wagon—and it relieved me to hear him say:

"As long as you're all right, boy, I 't goin' to worry 'bout the ol' gon—not a bit. Where'd ye git jumper?"

"Made it with the ax and some ls," I answered.

didn't hear what he said about for the horses were wallowing we had to stop and paw and k the snow from beneath them best we could before it was posle to back out of our trouble. n we found an entrance to the ds—our own fields not far from house—where Uncle Peabody lked ahead and picked out the t wading. After we got to the n door at last he went to the use and lighted his lantern and e back with it wrapped in a nket and Aunt Deel came with .

HOW proud it made me to hear him say:

"Deel, our boy is a man now—de this jumper all 'lone by himself has got thru all right."

She came and held the lantern up my face and looked at my hands. "Well, my stars, Bart!" she eximed in a moment. "I thought ye ld freeze up solid—ayes—poor !"

The point of my chin and the lobes my ears and one finger were ched and my aunt rubbed them h snow until the frost was out.

We carried the grist in and Aunt l made some pudding. How good was to feel the warmth of the fire l of the hearts of those who loved ! How I enjoyed the pudding and k and bread and butter!

"I guess you've gone thru the second peril that o' Kate spoke of," d Aunt Deel as I went up-stairs.

Uncle Peabody went out to look the horses. When I awoke in the rning I observed that Uncle Pealy's bed had not been slept in. I rried down and heard that our horse had died in the night of c. Aunt Deel was crying. As he me Uncle Peabody began to ce a jig in the middle of the floor. "Balance yer partners!" he shout "You an' I ain't goin' to be disraged if all the hosses die—be Bart?"

"Never," I answered.

"That's the talk! If nec'sary we'll ch Purvis up with t'other hoss an' our haulin' done."

He and Purvis roared with laugh- and the strength of the current pt me along with them.

"We're the luckiest folks in the rld, anyway," Uncle Peabody at on "Bart's alive an' there's ee feet o' snow on the level an' e comin' an' it's colder'n Greend."

T WAS such a bitter day that we worked only three hours and e back to the house and played Sledge by the fireside.

Rodney Barnes came over that ernoon and said that he would d us a horse for the hauling.

When we went to bed that night cle Peabody whispered:

"Say, ol' feller, we was in purty shape this mornin'. If we had- 'a' backed up sudden an' took a holt I guess Aunt Deel would'a' in complete an' we'd all been llerin' like a lot o' lost cattle."

We had good sleighing after that got our bark and salts to mark and earned ninety-eight dollars. while we got our pay in paper nk money," we had to pay our ts in wheat, salts or corn, so that earnings really amounted to y sixty-two and a half dollars, my le said. This more than paid our erest. We gave the balance and bushels of wheat to Mr. Grimw for a spavined horse, after ch he agreed to give us at least a year's extension on the principal. We felt easy then.

"Mr. Purvis" took his pay in salts and stayed with us until my first great adventure cut him off. It came one July day when I was in my sixteenth year. He behaved badly, and I as any normal boy would have done who had had my schooling in the candle-light.

Again Grimshaw had begun to press us. My uncle wanted to get his paper and learn, if possible, when the Senator was expected in Canton.

So he gave me permission to ride with Purvis to the postoffice—a distance of three miles—to get the mail. Purvis rode in our only saddle and I bareback, on a handsome white filly which my uncle had given me soon after she was foaled. I had fed and petted and broken and groomed her and she had grown so fond of me that my whistled call would bring her galloping to my side from the remotest reaches of the pasture. I had named her Sally because that was the only name which seemed to express my fondness.

"Mr Purvis" was not an experienced rider. My filly led him at a swift gallop over the hills and I heard many a muttered complaint behind me, but she liked a free head when we took the road together and I let her have her way.

Coming back we fell in with another rider who had been resting at Seaver's little tavern thru the heat of the day. He was a traveler on his way to Canton and had missed the right trail and wandered far afield. He had a big military saddle with bags and shiny brass trimmings and a pistol in a holster, all of which appealed to my eye and interest. The filly was a little tired and the stranger and I were riding abreast at a walk while Purvis trailed behind us. The sun had set and as we turned the top of a long hill the dusk was lighted with a rich, golden glow on the horizon far below us.

We heard a quick stir in the bushes by the roadside.

"What's that?" Purvis demanded in a half-whisper of excitement. We stopped.

THEN promptly a voice—a voice which I did not recognize—broke the silence with these menacing words sharply spoken:

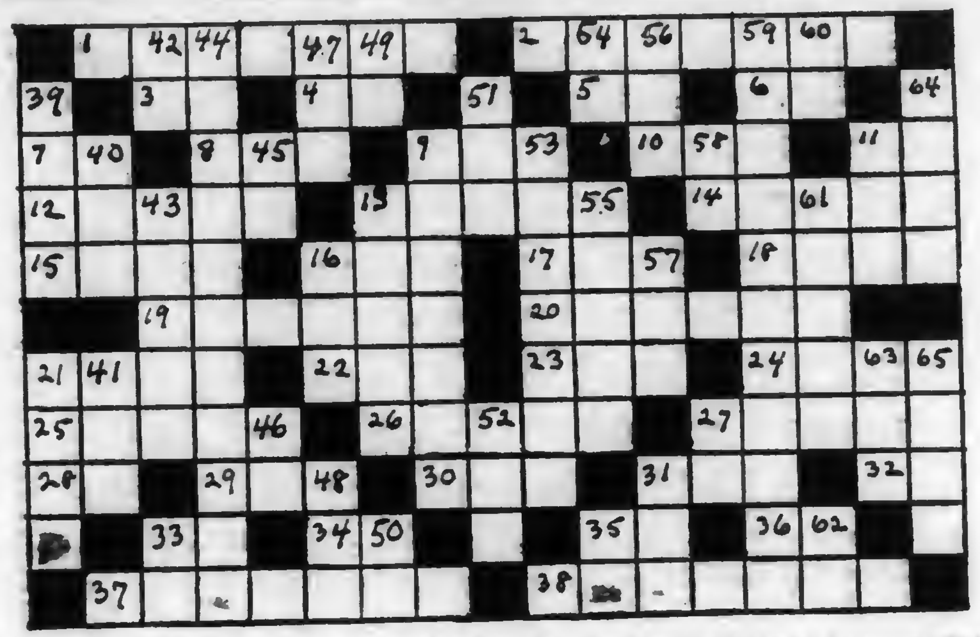
"Your money or your life!"

"Mr. Purvis" whirled his horse and lashed him up the hill. Things happened quickly in the next second or two. Glancing backward I saw him lose a stirrup and fall and pick himself up and run as if his life depended on it. I saw the stranger draw his pistol. A gun went off in the edge of the bushes close by. The flash of fire from its muzzle leaped at the stranger. The horses reared and plunged and mine threw me in a clump of small popples by the roadside and dashed down the hill.

My fall on the stony siding had stunned me and I lay for three or four seconds, as nearly as I can estimate it, in a strange and peaceful dream. Why did I dream of Amos Grimshaw coming to visit me, again, and why, above all, should it have seemed to me that enough things were said and done in that little flash of a dream to fill a whole day—enough of talk and play and going and coming, the whole ending with a talk on the haymow. I came to and lifted my head and my consciousness swung back upon the track of memory and took up the thread of the day, the briefest remove from where it had broken.

(To be continued next week)

Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example : 1 (reading across) is SLIPPER, and 9 (reading down) is TRANSOM. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. A kind of loose shoe
2. State in which the soul seems to have passed out of the body (plural)
3. Within
4. A citizen of the United States, abbreviation
5. Exists
6. Rural delivery, abbreviation
7. Old Saxon, abbreviation
8. A large covered vehicle for moving household goods
9. Contraction of "it is"
10. An agricultural tool for cutting weeds
11. Personal pronoun, still sometimes used
12. Administered medicine
13. Vexes
14. Furnished with a border
15. Small insects, noted for their industry.
16. Southern state from which we get oranges, abbreviation
17. Reverential fear
18. Besides
19. To achieve
20. A tropical fruit much used in this country
21. Wise men of the East
22. Railroads, abbreviation
23. Limited, abbreviation
24. A form of the title of an imperial ruler of Russia
25. A funeral song or ode
26. Musical sounds
27. A passage way leading to a church altar
28. A point of the compass
29. Part of the verb "to be"
30. Mire
31. Southern state, abbreviation
32. Southern state, purchased from France, abbreviation
33. Linear measure, abbreviation
34. Weight measure, abreviation
35. A physician's title, abbreviation
36. Left hand, abbreviation
37. A wave which comes in shore or dashes against rocks
38. One who charges another with blame or guilt

READING DOWN

9. A cross beam over a door
11. The affirmative answer
13. A coquette
16. Distant
21. An opening of a net
27. Abbreviation of Albert
31. Initials standing for the "greatest mother in the world"
33. French, abbreviation
35. Part of the United States which is neither state nor territory, abbreviation
39. Sodium oxide
40. A male child
41. Liquor made from malt
42. An island which is part of the Empire State, abbreviation
43. An elevated platform
44. To examine into
45. After date, abbreviation
46. Period of time, abbreviation
47. A broad shallow vessel used in cooking
48. A large deer of North America
49. Printer's measure
50. To exist
51. To cease to exist
52. Fruit with a kernel and shell
53. Lodged or sheltered (used for horses and cattle)
54. Smallest eastern Atlantic state, abbreviation
55. Smites
56. A kind of timber tree
57. The finish
58. Old English, abbreviation
59. Letters or certificates given to show that the holder has a right to confidence or to exercise authority
60. Abbreviation of Edward
61. A hard, brittle, transparent substance
62. Personal pronoun
63. Everything
64. To give up
65. Genuine

Did you ever hear this one?—

Two young kindergarten teachers, intelligent and attractive, while riding down town in a street car were engaged in an animated discussion. In the seat behind them sat a good-natured, fatherly looking Irishman enjoying a nap. Finally one kindergartener inquired of the other:

"How many children have you?"

"Twenty-two," she replied. "And how many have you?"

"Oh, I have only nineteen," replied the first.

At this point the Irishman, now wide awake with astonishment, leaned forward in his seat, and, without any formality, inquired in a loud voice:

"What part of Ireland did youse come from?"—Holstein Breeder and Dairyman.

Theater Manager—You do not seem to have enjoyed the show this evening.

Movie Fan—I did not. Let me ask you, is there any reason why the play should not end happily, instead of the hero and heroine always marrying at the last moment?

County News and Comment

ADAMS COUNTY, PA.—Good win- weather. Since Christmas nice ering of snow. Roads in good con- ion for winter traveling most of time. Some pruning being done the orchards and more farmers are uling manure out onto the fields u the winter than formerly. eat, $1.95; corn, $1.50; oats, 60c; k, 14c; milk, $2.40; eggs, 50c.— R., Jan. 20.

FAYETTE COUNTY, PA.—Winter been very mild so far. Some snow ry few days but it does not stay y long. Farm products are selling y slow, but some of the public rks are starting up now; this may p the sale of the farm products. ry few hogs in the county at the sent time. Wheat is looking very wn, caused by heavy freezing and snow to protect it. Had a heavy n and sleetstorm last night which sed some damage and made it y icy. Corn $1.50 per bu.; wheat, 60 per bu.; hay, $25 per ton; , 75c.—E. H. V., Jan. 20.

WARREN COUNTY, N. J.—The t real snow of the season covered ground to a depth of twenty hes on January 2. It took four s to get the state highway in veling condition and some of the al mail routes are not passable by o yet. The coldest weather was on uary 15 when the mercury tum- l to ten below zero. Most of the mers and creameries have their houses full of ice measuring four- n to eighteen inches. Teams cross Delaware on the ice for the first e since 1917. Feed is advancing price while milk remains the e. Wheat, $1.70; oats, 65c;; rye, 10. corn, shelled, $1.15; ear, $31 ; bran, $2.10; middlings, $2.50; onseed, $13; oil meal, $2.70; ten, $2.50; brewers' grain, $2.30; t pulp, $2.30; cob meal, $1.80; ter, 56c; eggs, 58c.—A. S. P., . 17.

WARREN COUNTY, PA. — An ndance of snow everywhere. A k up was predicted by weather phets but none is in sight as more w is falling. Have experienced eme cold entire month. Farmers poultrymen are interested at ent in poultry exhibit at War- . Many fine pedigreed birds on lay. Poultry keeping has made t advancement in last year thru- county. Bees doing well, not yet ing a cleansing flight since No- ber, due to too few warm sunny . Farmers getting wood and do- chores, about only thing that be done at present. Second crop e was harvested last week, first gathered in December. Agri- ure enumerator busy; finds that many keep books on the farm. m products range about the ; eggs, 65c; butter, 45c; pota- , 75c; apples, $1.50.—H. C. J., . 16.

WASHINGTON COUNTY, PA.— onable winter weather for some now. Roads rough but solid. l auto has not missed a day yet dirt roads; quite unusual this in winter. Farmers busy haul- hay, manure, etc., killing beeves, making pit posts. Beef selling 10@12c lb. by the quarter. Lots public sales everywhere. Many ing the farm for as many causes, the chief contention is that it 't pay. The nightmare of taxes worse than most anything else. farmer, or farm owner, in Smith ship, reports that it takes the received for two years to pay year's taxes. Too many foreign- mostly miners, seem to cause trouble. They own but little ble property, yet nearly all raise families. These children must ucated and the natives pay most he bill. One new school building in county is said to have cost $100,000 for 300 pupils. Of this number forty were native and 260 foreign, so there you are; each year its grows steadily worse. What can we do about it? Growl, and hold protest meetings? Sure, but that doesn't get us anywhere. What seems most promising now is to try to get an extra heavy poll tax levied on miners, etc., same to be deducted from pay checks by the coal companies. This sounds too much like Russia and would raise Cain. Guess we will eventually have to move out and let them have the region—taxes and all. Lots of men out of work so business is rather dull. Butter, 40@65c; eggs around 70c; chickens, live, 18@20c; hay, $20; corn, shelled, $1.40; oats, 65c. Wool market looks good.—B. McN., Jan. 20.

Feed Prices

THE quotations are for transit and nearby shipments, Thursday, January 22, 1925, according to the Pennsylvania Bureau of Markets, the New Jersey Bureau of Markets, and the United States Bureau of Agricultural Economics co-operating. The following quotations show the approximate cost of feed per ton (all in 100-lb. sacks), sight draft basis, delivered on track at Philadelphia and Scranton rate points.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York-Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury-Bridgeton rate points, add $1.00 per ton; for Freehold-Toms River-Cape May points add $1.40 per ton.

Coarse spring bran ...	$36.75@37.00

Market Milk Contest

TO BURLINGTON COUNTY dairymen will go a majority of the awards in the annual market milk contest, conducted by the State Department of Agriculture at the New Jersey Farm Products Show, a feature of Agricultural Week, in Trenton. High standards of all entries made the competition, this year, keener than in any past show, and indicated, market officials say, the trend toward higher standards of milk production thruout the state.

In the inter-city better milk contest, Elizabeth, with an average of 96.3 for its five highest entries, defeated its nearest rival, Atlantic City, whose score was 93.86. Milk entered in the municipal and individual competitions was judged by federal dairy experts and scored on points for freshness, cleanness and quality.

Burlington Wins on Producers' Milk

Burlington farmers made a complete clean up in Class 1, for producers' milk, entered by dealers from stock. Winners and scores were: First, Walter Reeder, Columbus, 98.2; second, Lyman Horner, New Lisbon, 97.3; third, Howard Poinsett, Wrightstown, 96.6. Class 2, for entries by producers from tuberculin-tested cows, gave first to A. Horner & Son, of New Lisbon, 98.5; second, David Croshaw, Wrightstown, 97.7; third, C. C. Tallman, Columbus, Walter E. Wright, Columbus, and David Shaw, Swedesboro, tied with 97.4.

Certified milk honors in Class 3 were won by Woodbrook Farms, Metuchen, 98.5, with second place to Raritan Valley Farms, Somerville, 95.5. Class 4, for pasteurized milk, gave first awards to Supplee-Wills-Jones, Atlantic City, 97.2; second, Abbott's Alderney Dairy, Atlantic City, 96.5; third, Shrewsbury Dairy, Shrewsbury, 96.2.

Heavy Wheat Exports

DURING 1924, the value of the exports of grains and grain products from the United States was greater than those of 1923 by $122,450,000. The year 1924 was marked by striking gains in the exports of all grains, except corn and rice and by heavy losses in the exports of corn, rice and of certain manufactured products.

The chief gains were made by wheat, the value of the exports of which was greater by $120,624,000 than that of 1923. Next in importance were: Barley, with a gain of $12,427,000; rye, $11,018,000; wheat flour, $3,069,000; malt, $1,619,000. Small gains were also made in the exports of oats, buckwheat, rye flour, biscuits, macaroni and "other corn and wheat preparations for table use." Thus the gain made by wheat is responsible for most of the creditable showing 1924 is able to boast of over 1923.

Losses on Corn

On the other hand, there were heavy losses suffered during 1924 as compared to 1923—notably in the exports of corn ($19,017,000), rice ($5,551,000) and oatmeal ($2,109,000). Smaller losses were recorded in the exports of buckwheat flour; corn meal and flour; hominy and grits; rice meal and flour; "cereal breakfast food not elsewhere specified."

Fewer Cattle on Feed

ONLY about 82 per cent as many cattle were on feed in the eleven Corn Belt States, January 1, 1925, as on the same date last year, according to the final winter feeding estimates of the United States Department of Agriculture. The number on feed in the states east of the Mississippi River was 87 per cent of last year and in the states west of the river there was 81 per cent.

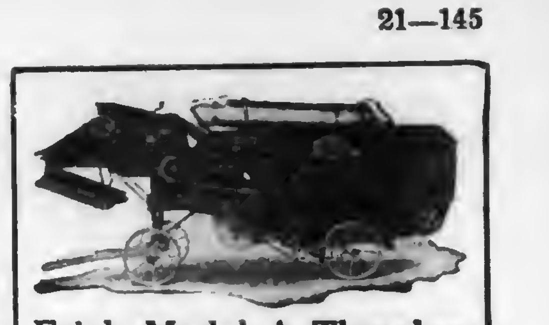
In Iowa and Nebraska, which ordinarily feed about one-fifth each of the total cattle fed, the estimated numbers on feed as a percentage of the numbers a year ago, were 74 and 82, respectively. The next most important states, Kansas and Illinois, show 90 per cent and 88 per cent; Ohio and Indiana each show 80 per cent; South Dakota shows 65 per cent; and the three states of minor feeding operations, Wisconsin, Minnesota, and Michigan, show 95 per cent each.

Larger Than in 1920 Season

In the western mountain and Pacific States, about 90 per cent as many cattle were on feed as on January 1, last year. Colorado and Utah had about the same number, but all the other states had somewhat less.

While stocker and feeder cattle shipments of 1,825,000 head during the last six months of 1924 into the Corn Belt were 19 per cent smaller than for the same period in 1923, and 23 per cent smaller than in 1922, they were much larger than in 1920 and 1921.

Cattle marketings and slaughter in December were the largest for this month since 1919. The increased shipments were from the states west of the Mississippi River, especially from Iowa and Nebraska.



Frick Model A Thresher
Size 20x34 Inches
The lightest running small threshing machine made—threshes just as efficiently as machines of larger capacity. Can be operated with Fordson or other available power.

Farm Census Important

SECRETARY of Agriculture Gore comments as follows on the farm census now being taken: "The Department of Agriculture is vitally interested in the census of agriculture for which the enumeration is now in progress. Every farmer should also be interested in this work because this census will result in obtaining facts that will lead to a proper understanding of the actual conditions existing thruout the country.

"The census is taken by the Department of Commerce in co-operation with the Department of Agriculture. The schedule of inquiry was approved by the Department of Agriculture and directed to determine matters of fundamental importance to the welfare of the agricultural industry. This census is needed as a basis for the annual crop estimates of the Department of Agriculture, and it is of great importance that the results be accurate. The totals of farm acreage, land utilization, livestock, crops, etc., will show actual conditions during 1924 and will be used for the preparation of estimates for each year until the next census.

Will Reveal Farmer's Position

"This census is being taken primarily for the benefit of the farmers. I can assure them that all of the information contained on the census schedule will be treated as strictly confidential and will be used only for statistical purposes to show the totals for the different counties and states. All this information will directly or indirectly be of benefit to farmers and to farmers' associations and organizations thruout the country. It will help Congress to legislate wisely in matters affecting the farmers' interests.

"I desire therefore to appeal to the farmers to give prompt reply to all of the inquiries on the schedule and in every way possible facilitate the work of the enumerator, so that the census may be taken quickly and that there may be no delay in tabulating the figures and publishing the totals."

Dusting versus Spraying

A new bulletin entitled "A Comparison of Materials Used for Dusting and Spraying for Apple Scab in Pennsylvania" has just been completed by members of the botany department of the Pennsylvania State College. This bulletin should prove of much interest to orchard growers in the state and after publication copies may be secured by addressing the Mailing Room, Pennsylvania State College, State College, Pa.—B.

Cleaning Up a Well

As an old reader of your paper I would like some advice regarding a well and pump which is giving us trouble.

The well is drilled and is about 100 feet deep and has a good make of pump. Well and pump are about six years old. The water comes up very red and filled with iron and is scarcely fit to drink. The vein of water which this well taps comes to the surface a few hundred feet away and is beautifully clear and fine. This leads us to believe that the trouble is with the pump. Some people tell us that a short piece of pipe removed from the bottom would remedy this.

We would greatly appreciate your opinion. What tools could be necessary and how should we proceed to clear up this highly color water?—F. D. S., Potter County, Pa.

While you do not state whether or not the water from this well was clear and good when the well was first put into service, I am going on the assumption that it was and that it has become colored and of bad taste gradually. In this case, you should look to the well tubing or the pump for the cause.

I suggest that you pull the tubing and cylinder out of the well and if the cylinder is of iron, replace it with a brass cylinder. If the tubing is rusted, I suggest that you discard it and replace it with a heavily galvanized pipe of the same size. The only tools necessary will be a pair of heavy pipe wrenches and a well tubing vise which will allow the tubing to pass upward but which will not allow it to slip down into the well.—Frank Meckel.

Improving the Farm

(Continued from page 3)

a poultry lot. He tackled the mass of weeds and dilapidated fences with hatchet, ax, pruning shears, scythe, pick and a few other tools of construction and destruction. Soon the place somewhat resembled old Silas Hopkin's face after he shaved off his mustache and whiskers, which he had worn continuously for a period of thirty-five years!

The lawn was graded. A hedge of privet partly surrounding it now. A few flower beds were started. Paint was applied to the buildings. The interior of the house underwent a few alterations, with the result that during the last year the owner, who happens to be the writer of this article, has received many compliments on the "fine, cozy little home."

This article is not written with the idea of boasting about our own accomplishments, as we are aware of the fact that many others have done equally well or better. We are writing, rather, with the idea of stimulating action and sentiment leading to a campaign of home beautifying and improving.

Views of Products Show

(Continued from page 3)

as a means for making farming more like business and less like gambling. The organizations are not on the right track unless they aim to get full value when buying and to give full value when selling. "We'll get out of our organizations what we put into them," said Mr. Brubaker. "It's up to us."

* * *

Secretary of Agriculture Willits pointed out at the Wednesday morning dairy meeting that New York has spent eight million dollars on tuberculosis eradication in the last two years, and will probably spend as much in the coming biennium. Pennsylvania dairymen have asked for two millions to be used in this work during the next two years, and are afraid they won't get it.

* * *

The Lebanon County Potato Growers' Co-operative Association had a striking exhibit in their perfectly formed pyramid of potatoes which was about four feet high. The potatoes in the display had been so carefully selected for uniformity that they looked as tho they might all have been cast in a mold like a lot of bricks.

* * *

According to those who know, the wool display at this show was the largest and best thus far seen in the eastern part of the United States.

* * *

Visitors were greatly surprised by the fine quality of the seed corn exhibit. When the word went around that Pennsylvania's seed crop was very poor this year, the county agents and others interested hustled around to see if there really was any good seed left in the state. One of the results of their search was this exhibit which contained corn that equaled in quality, if it did not surpass, that shown at any previous State Farm Products Show.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

SCRATCHES—CRACKED HEELS.—Please tell me what to do for my horse that has the scratches.—W. F. H., Wittman, Md. Dissolve one ounce acetate of lead, six drams of sulphate of zinc, one dram tannic acid in one quart of rain water and apply to sore heels twice a day. The heels should be kept dry, stable clean, and if the animal is idle, don't feed much grain.

FISTULA OF THE WITHERS.—We have a mule that is troubled with fistula of the withers.—J. E. S., Cordova, Md. If the abscess is forming and has not yet opened, paint bunch daily with tincture of iodin; if open inject one part carbolic acid which has been mixed in twenty parts water. You should have given me some history of this case.

WORMS—CURB.—Have a horse that is troubled with large worms; also have a three-year-old colt which has curb, not lame, but considerable of a bunch.—J. W. S., Milton, Pa. A fairly good home remedy is turpentine and raw linseed oil. From one and one-half to two ounces of turpentine in one quart of raw linseed oil, one dose only. For curb apply one part red iodide of mercury mixed in six parts lard, once a week.

COUGH.—Every morning when my cow gets up she coughs two or three times, she is in good condition, due to come fresh in March. Her milk grows bitter after standing few hours, beside we have trouble churning the cream into butter.—C. P. S., York, Pa. Dry her, also admit more fresh air into stable, feed her some roots, exercise her.

UNTHRIFTY HEIFER.—I have a heifer about thirteen months old, not with calf, but she remains thin, is fairly well fed and has good appetite. Can you tell me what is the matter with her?—M. E. G., Summit, Pa. A change of feed and plenty of it is perhaps all that is required, but is she not one of the thin kind? Animals are fattened by generous feeding, lack of exercise, plenty of water and fresh air. A healthy animal with good appetite does not require drugs.

BRUISED UDDER.—We have a cow fresh about four months which has soft bunch situated between the two rear quarters of udder. Occasionally, she gives stringy milk and the back portion of bag swells. We have hand rubbed bunch but it don't help it.—E. B. M., Coleman, Pa. Apply one part tincture of iodin and four parts camphorated oil to bunch once or twice a day. Give her one-half ounce fluid extract of phytolacca at dose in soft feed or in drinking water two or three times a day.

ABSCESS.—I have a pig six months old that had bunch in throat the size of duck egg. It was soft, I opened it and foul smelling pus escaped. What caused it? Are my other hogs in danger?—C. A. R., Middleburg, Pa. Abscess is commonly caused by bruise, especially when located on the external portion of body. Your other hogs are in no danger.

"I thought she had him under her thumb."

"That's what she thought; but found she had him on her hands."

DAIRY CATTLE

REGISTERED HOLSTEIN BULL CALF 7 months old. Sire's ten nearest dams' records average 31 lb. butter in seven days and two nearest dams' average 1137.0 in one year. Dam is a great producing cow. WE PAY $[illegible] monthly salary, furnish car and expenses [illegible] Bigler Company X718, Springfield, Ill.

Select the Right Analysis for Your Crop

Through years of research and actual field experiments, the state agricultural colleges and experiment stations have determined the analyses of fertilizers which will give you the best results on each crop and soil.

For Pennsylvania, the Pennsylvania Agricultural Experiment Station recommends the following analyses:

Corn—No manure or clover sod, poor soil, 2-12-4, 3-10-6; medium soil, 0-12-6; rich soil, 0-16-0; with manure or clover sod, poor soil 2-12-4, 0-16-0; medium or rich soils, 0-16-0.

Wheat, rye and oats—No manure or clover sod, poor soil, 2-12-4; medium soil, 2-12-4, 0-16-0; rich soil, 0-16-0; with manure or clover sod, all soils, 0-16-0.

Alfalfa when seeded—No manure or clover sod, medium soil, 2-12-4; rich soil, 0-16-0; with manure or clover sod, poor soil, 2-12-4, 0-16-0; medium or rich soils, 0-16-0.

Alfalfa, top, dressing—No manure or clover sod, medium soil, 0-12-6, rich soil, 0-12-6, 0-16-0; with manure or clover sod, poor or medium soils, 0-12-6, 0-16-0; rich soil, 0-16-0.

Timothy—No manure or clover sod, poor soil, 7-6-5, 6-8-4; medium soil, 7-6-5, 10-5-0; with manure or clover sod, poor soil, 0-16-0.

Potatoes—No manure or clover sod, poor soil, 3-10-6; medium soil, 2-12-4, 3-10-6; rich soil, 2-12-4; with manure or clover sod, poor soil, 3-10-6, 2-12-4; medium soil, 2-12-4; rich soil, 0-16-0.

Vegetables, (Leaf crops.)—No manure or clover sod, medium or rich soils, 6-8-4, 4-8-4. With manure or clover sod, medium soil, 4-12-4, 4-12-0; rich soil, 4-12-4, 4-12-0, 0-16-0.

Tomatoes, peppers, cucumbers, melons, egg plants—No manure or clover sod, all soils, 6-8-4, 4-8-4; with manure or clover sod, poor or medium soils, 4-12-4; rich soil, 4-12-4, 4-12-0, 0-16-0.

Vegetables, (Root crops.)—No manure or clover sod, poor soil, 5-10-5, 4-8-6. Medium soil, 4-8-6, 4-12-4; rich soil, 4-12-4. With manure or clover sod, poor soil, 5-10-5, 4-12-4; medium soil, 4-12-4, 2-12-4; rich soil, 3-8-3, 0-16-0.

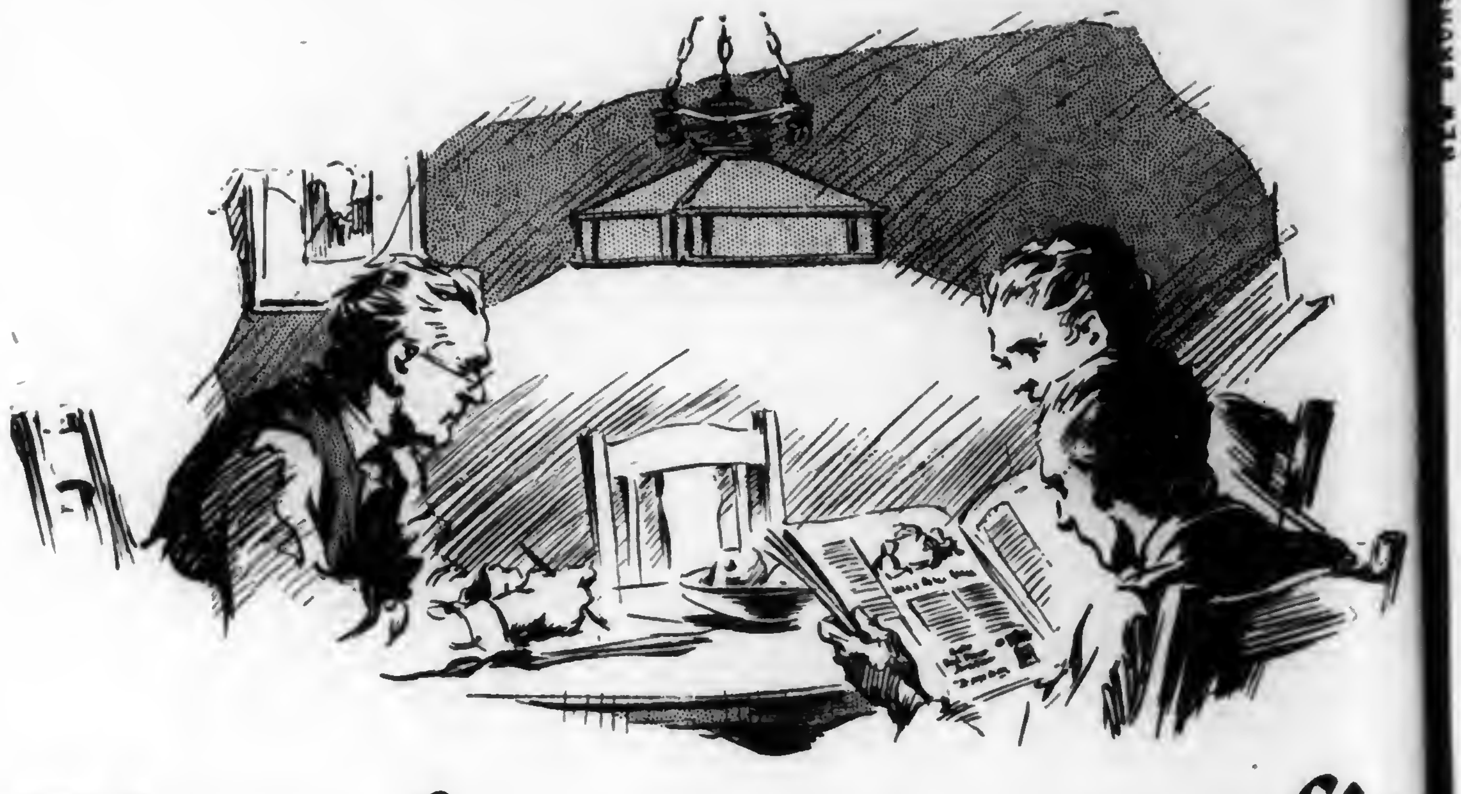
Tobacco—With or without clover sod, medium and rich soils, 5-8-5, 4-8-4.

As an Authorized Swift Agent for the sale of Swift's Red Steer Fertilizers, we are co-operating with the Pennsylvania Agricultural Experiment Station in recommending and selling these analyses.

Come in and we will help you select the analysis and decide on the amount per acre to make you the most profit.

asa

Authorized Swift Agent



Plan for more profit

Profit on crops is the difference between the selling price and the production cost.

The selling price is practically controlled by supply and demand. But the cost of production is governed mainly by the yield per acre and per man, which to a large measure, you can control.

Fertilizers influence the yield and the quality more, probably, than any other factor, except the weather. Therefore, in planning for more profit it is of utmost importance that you consider carefully who makes the fertilizer you use and the analysis and amount you should apply per acre.

Your guarantee of quality

Swift & Company's extensive facilities afford unusual opportunities to determine the agricultural value of the different forms of plantfood, and to make use of the findings of Experiment Stations and other recognized scientific authorities.

Only the most productive sources of plantfood are used in the manufacture of Swift's Red Steer Fertilizers. Back of each bag is the 50-year-old Swift reputation of making every product the best of its kind.

Twenty-three factories, conveniently located, are ready to serve you—special manufacturing equipment enables us to properly process and combine the carefully selected fertilizer ingredients. Every pound of fertilizer is thoroughly and evenly mixed so that each plant will be supplied with its proper proportion of plantfood to make the biggest yield of best quality product.

When you use Swift's Red Steer Fertilizer you know you are using the best.

See the Authorized Swift Agent

The A. S. A. (Authorized Swift Agent) is an individual or firm in your community with a reputation for square dealing.

His success depends upon your success. He is pledged to co-operate with Swift & Company in supplying the farmer with the fertilizer that gives him the most plantfood for the money; the analysis that produces biggest yield and best quality crops, and to recommend the amount per acre that gives the farmer the most profit. This Swift Service is based on actual results secured by your State Experiment Station and practical farmers, and is worth money to you.

Plan now next spring's fertilizer requirements with the A. S. A. If you do not locate him readily, write us and we will put you in touch with him.

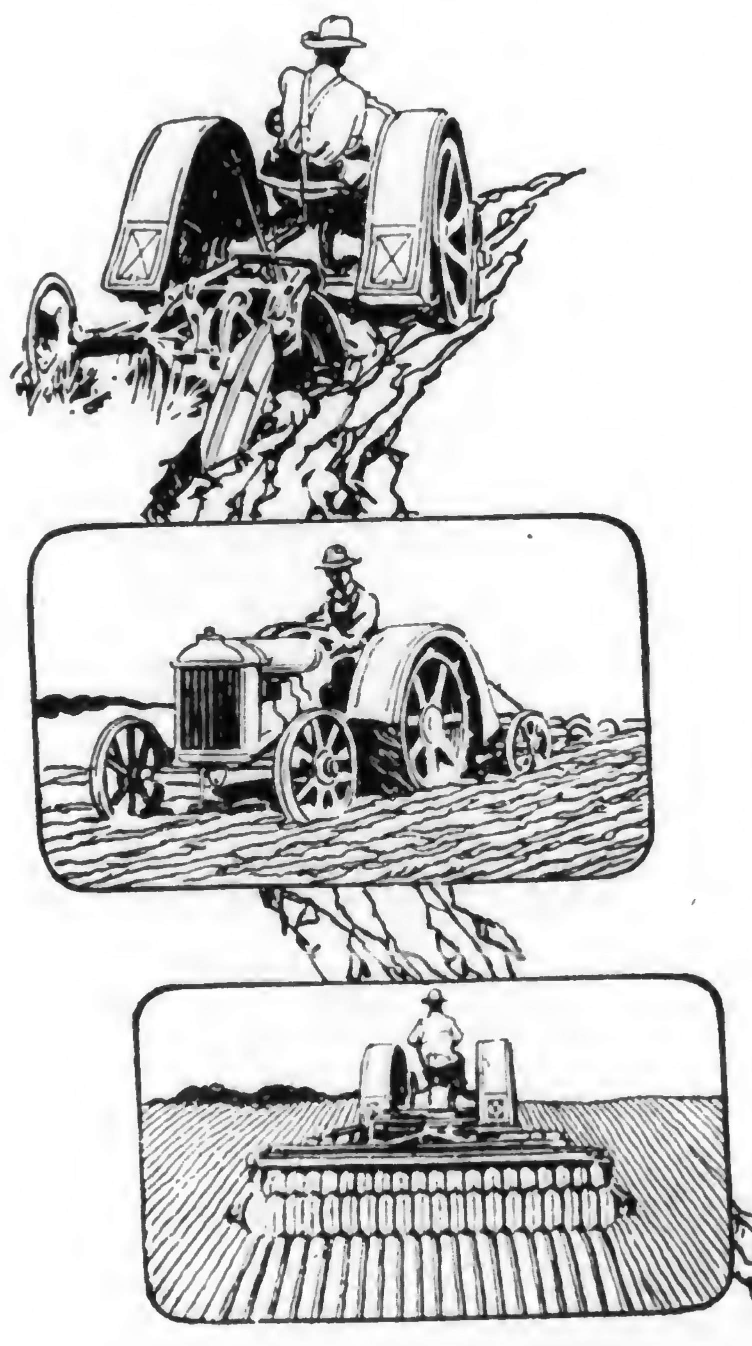
(Pittsburgh Market Edition)

PHILADELPHIA, PA., SATURDAY, FEBRUARY 7, 1925

N. J. AGR'L EXP. STATION LIBRARY
FEB - 1925

How would you like to live in a home completely equipped with the latest electrical labor saving devices? Read about the Electric Farm, page three.

Time Is Stuff of Whic
Crops Are Made



With the Fordson, you farm for prosperity, because your acreage is broken in less time; because your furrows are the proper depth, and because your seed beds are thoroughly well made.

The Fordson saves feeding time, watering time, grooming time and hitch-up time. It needs no "favoring" or breathing spells. It will work twenty-four hours a day.

Fordson farmers finish their Spring work—plowing, harrowing, discing and seeding—at the right time, because of their ability to do more and better work when weather and soil conditions are favorable.

Better crops and bigger bank balances follow the use of the Fordson—it is a logical and time-proven investment.

Electricity–the New Hired Help

Proved Its Usefulness in the Home at the Electric Farm Near Harrisburg

By Mrs. IDA S. HARRINGTON
Editor of the Home Department

ERE S a good time coming for the farms and farm homes of Pennsylvania. Thousands of now struggling along without hired help. be able to employ the big public servant, icity.

en that time comes (and it isn't so far), folks will say:

'll tell you when I first began to believe I'd lectric power within my reach and within

e electric cooker simplifies breakfast.

ans. It was at the Farm Products Show in hen the electric farm exhibit was put on. ou ever see an exhibit three miles from ter of things that drew such a crowd? The Power Survey and all those great organiza- hat co-operated, started a big thing! They earned the thanks of us "

n thanks are going around, a debt that every home-mak- l recognize as the biggest of e debt we owe to Mr. J. Q. A. ord and his family for open- eir farm and home to the ex- Why, if you mixed threshing o-filling and house-cleaning, few other delights of that all up together, it would be l compared to the life of the ord household during the the exhibit!

oking under Difficulties

crowds to cook for, of course, w would you like to have streaming thru your kitchen ou were trying to start your pper? How would you enjoy people push past the "Pri- gns on your sitting-room door all kinds of questions? How you feel if a photographer o take pictures just as you repared to call it a day and ed?

n all the years of its existence s the date on the door-step) old house faced such experi- But its disposition,—like that of the family it shelters,—is too fine to be ruffled.

"Nobody on our line is getting a chance at the telephone these days," laughed Miss Rutherford as she answered their ring for the fifth time in ten minutes. "Please signal my brother with that electric siren," she called to a boy who was passing, "he's at the barn. We've established a system of signals this week to save time," she explained.

"You'll really miss that siren when it's taken down with the rest of the exhibit, shan't you?"

"That and many other things!" agreed Miss Rutherford. "Father says that if we installed all the things we should like, all at once, there might have to be a sheriff's sale next year. But there are some of these things that you just can't seem to live without, after you've once had them. We've had an electric heating pad for some time, just like this one in the exhibit. It is worth its weight in gold if anyone is ill."

He Didn't Tend the Kitchen Fire

Just then an elderly couple stopped to look at the immersion heater in which an up-to-the-minute nursing bottle was being warmed. "Let's start life all over again, Mary," suggested the man with a shivering memory of the night feedings when Tom was a baby and Mary had that tussle with the grippe.

Not all the men visitors were as progressive as this one. "Isn't that electric range a wonder?" one woman asked her husband in an awed whisper. "No," he snubbed her, "I don't care anything about that!" One wondered if he had ever had to struggle with a fire that refused to burn!

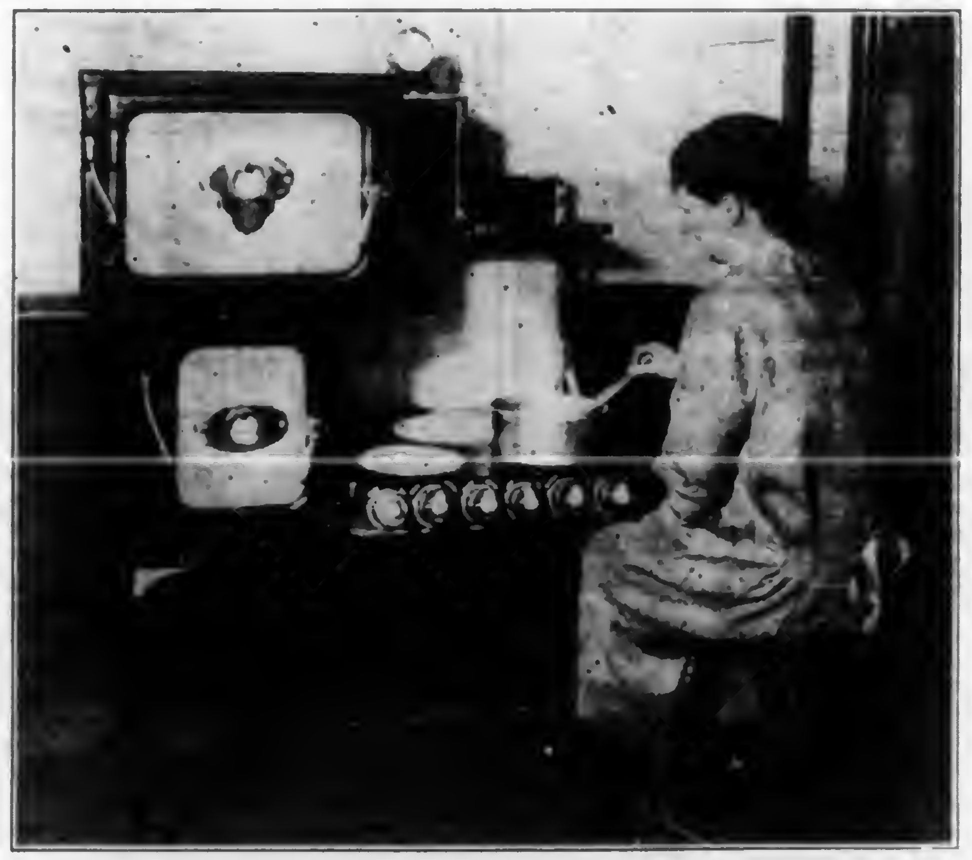
"What will the women do for exercise?" asked another man who evidently had the old idea that a kitchen is a sort of race-track where the woman does her daily dozen miles.

But even the men who were indifferent to electric help in the kitchen were won over by the electric piano and the radio in the living-room, and hung admiringly over the electric lamps. The shade of a piano lamp which pictured green fields and trees, and a brook so real that one could almost hear it, drew a big sigh of longing from one man. "I do like scenery," he explained.

The machine that washes the dishes.

That living-room was just crying aloud for a family with leisure to enjoy it,—an impossibility for the farm family unless they can hire help. Since hired help of the human variety can't be had, isn't it good business to invest in this new kind of hired help that will do as we say, never talks back, and never gives notice?

The whole exhibit pictured a possible household routine which is no more a pipe dream than many other things once seemed,—things that are commonplace today. Suppose you spend an imaginary week working in a house equipped after the manner of the exhibit.



This clock-controlled electric range is a woman's dream come true.

Starting the Day Right

An efficient day starts the night before. So you'll start the breakfast cereal and apple sauce in the electric fireless cooker; you'll grind the coffee in the electric-mill; perhaps you will even grind meat for next day's meat loaf, since the electric meat grinder shows you such a cheerful ruddy front; you'll have the flash-light and immersion heater handy, so that Miss Baby may be promptly served in the wee small hours; you'll use the heating-pad to warm those cold feet and soothe that tired ache between the shoulder-blades so that sleep will come without delay to refresh you for a good day's work.

Quick dressing is impossible with cold hands. How those chilled fingers do fumble! Ten minutes' worth of the electric heater, or the glo-leg or grate, will speed you up wonderfully.

Breakfast means taking the foods from the fireless, and attaching the coffee percolator and toaster or

(Continued on page 10)

If only I had taken my parents' advice

How often have you heard people exclaim, "I wish I had heeded my parents when they wanted me to take piano lessons"? After listening to a good pianist, how many times has it left you with a longing to be able to create such music yourself?

Some day your children will be grown up. Will they be able to play? Or will they have to sit back and say, "I never had an opportunity to learn the piano"? Give them this opportunity. Buy a good piano and make music a part of their education.

A Weaver Piano is a source of constant musical inspiration—to the beginner, to the trained ear of the practical musician. The enchanting purity of its tone entices the stumbling fingers of the learner. It arouses the desire to make good music. The Weaver action, noted for its responsiveness and delicacy of touch, invites and rewards faithful practicing.

After using a Weaver Piano, Mme. Louise Homer, late of the Metropolitan Opera Co., said of it: "I am delighted with your Weaver Piano. The tone and action suit me exactly." This is the consensus of opinion of many of this country's leading musicians who have chosen the Weaver from among the world's greatest pianos. Its tone and action, the two most important requisites of a piano, have received the unstinted praise of these exacting artists.

A good piano should be a part of every home. Write to-day for the name of the dealer in your vicinity. Ask for the Weaver catalog—and full details of our easy terms. A liberal allowance will be made on your present piano.

OUR FARM
Where an Editor Works and Thinks

THE planting of a place with varieties that are sure to do well is much simpler if there are those in the community who have been engaged extensively and intelligently in the fruit and vegetable business. One may by observation and inquiry find out what does best in that particular locality by inquiring of successful producers. Otherwise, it is necessary to read and study a great deal before ordering, and even then some mistakes will be made. I long ago learned that fruit and vegetables behave differently on different soils and in different climates. Catalog descriptions, however truthful the authors may be, are not to be taken as a sure guide in selection.

* * *

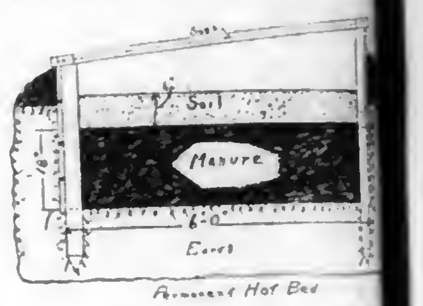
AFTER a great deal of thought and investigation we have settled upon the Shiro, Bradshaw and Abundance as the varieties of plums we shall plant this year. We have grown the latter two in former years and our friend, Sheldon Funk, recommends the Shiro as a fine plum for home and market. Our past acquaintance with him teaches us that his judgment is to be relied upon. As to strawberries, we find the Premier and Big Joe good reliable sorts in our community. Last year we set a few Cooper and some Gibson. We never saw plants grow more vigorously. We shall transplant a number of them into the new patch this year. Modern strawberries when compared with the varieties popular a generation ago show as much improvement as is found in other fruits and vegetables.

* * *

ONE things stands out very boldly as we make up our list of things for planting and equiping Our Farm: that is, prices are about twice as high as they were when we made out similar lists fifteen to twenty years ago. On first thought they seem unfair and I am inclined to resent them. But on second thought, after remembering the prices at which we sold our produce in those days, we consider them fair enough. In the former days we sold strawberries twelve for a dollar. Now they bring fifteen to twenty-five cents. Po were retailed at forty and fifty per bushel. Even last year we ceived better than a dollar on average. We sold eggs at fiftee twenty-five cents per dozen. T we are getting seventy-five eighty cents. After looking honestly I say to myself, "Quit kickin'. Prices are fair enough

* * *

WE learned years ago that a bed was necessary to successful dening. The last thing we did fall was to dig out a place and in the frame for a hotbed thirty long by six feet wide. The fro south side is two feet high and rear is three feet high. This g slope of one foot. It requires sash three by six feet. Horse m will be packed into the bottom,



No. 1—Cross section of hot bed m use on Our Farm.

it has been forked over once or to start fermentation evenly th On this will be placed about inches of good garden soil. I weather is favorable seeds and may be put up in March. Dr No. 1 on this page will give idea of a cross section of the bed.

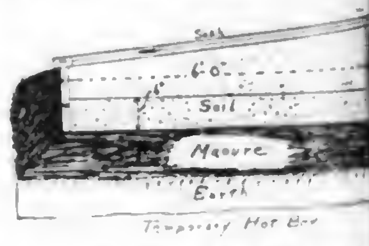
WHERE there is plenty of horse manure a temporary may be made as shown in d



No. 2—Temporary hot bed made o horse manure.

No. 2. Here the framework is and is set on top of the pile of ure and manure is banked up it. This plan does very wel makeshift, or as an extension where the pile of manure is able.—R. P. K.

THE CHEERFUL PLOWMA
Take the Air!

A MAN who gave his name as fellow selling "Tweed-Kn and "Corrugated" ties, fringed of Northhampden weave, and " kerchiefs, I believe, of varied to size, called at my home the oth and said his precious little say; he ed deft and fine, and hoped to m little speech so I would buy a each and sign the dotted line!

I aim to treat all living gen courtesy and broncho sense, re of their game, so when this m sung his lay, I answered, "No, no today, but thank you just the s have old friends in Dumphreestown, so when in need I saunter d Kempenfelt and Gore, and there take on the things I need, or go to fuss and Reed, or Christie's Woolen Store!"

But say, my courtesy was spent on what I call a graceless gent flew mad at once! He said a heap of frantic things, like "tied to nei apron strings," and "local-minded dunce." He told how we were gypped, and fleeced, and robbed, and stung, and nipped by bandits stores, while kindly fellows such as he, "trade missionaries," don't brought balsam for our sores!

"They'd take the land, your merchants would, and half the they could—" But I estopped him there. "You say they'd take th and sea? Well then," said I, "it seems to me you'd better 'take th —J. Edw. Tufft.

Need for Vigilance

THERE is a continual pressure brought to bear upon legislators to "loosen up" on what are called restrictive laws. There is also a steady stream of propaganda fed to the public by different agencies which is intended to change sentiment, and ridicule and make non-effective what the promoters please to call "archaic blue laws." Needless to say the greater part of the effort is exerted by those who wish to make money exploiting the weak and evil-inclined elements of society. Some of the things in which this class of promoters are persistently active are: the repeal or liberalizing of the prohibition amendment; the liberalizing of the Sabbath laws; the repeal of the movie censorship law; the removal of restrictions upon plays, pictures and books, and, in short, the general substitution of Bohemian ideals for what they choose to term the Puritanical ideals.

The worst of it is this steady pressure is having some effect upon the unthinking part of the masses. Unfortunately, the greater part of the daily press, read by the masses and partly supported by the propagandists, is too often found lending its aid either actively or tacitly to the furthering of these "liberalizing" movements. There is urgent need for greater diligence on the part of those who believe in holding fast to the tenets and practices which the ages have shown to be based upon morality and true religion.

The Community of Interests

AN EASTERN farmer said the other day in our hearing:

"We, in the East, are not much interested in the welfare of the western farmer. In fact, when the chief products of the Middle West are low in price it is to our advantage, since we buy more grain and feed than we raise. Our farming is more general and intensified along special products such as dairying, gardening, fruit-growing and the like."

We have heard similar remarks before and feel like cautioning eastern farmers against taking so short-sighted a view, even if from no other than selfish reasons. The Middle West is the great natural grain and stock growing section of the country. Because of the extent of rich agricultural land and the lack of numerous nearby markets such as are found in the East, the wholesale production of the leading staples is well suited to that section. Quantity production for shipment to other sections is the logical business, providing it will pay a profit.

But eastern farmers should remember that their rich soil will produce other things than wheat, hogs and cattle. If paying prices cannot be secured for these products, it will be natural for them to turn to other things. The East is already feeling the effects of the expanding dairy business of the West and the same thing can occur in every other line. The eastern farmer cannot safely feel indifferent to the welfare of his western brother.

Some Potato Figures

THOSE who talk of adjusting production so that we shall have just enough to supply home demands and thus do away with the suicidal surpluses will find some food for thought in comparing the potato crops of 1923 and 1924.

	1923	1924
Acreage	3,816,000	3,662,000
Yield, bushels	416,105,000	454,784,000
Farm value..	$324,889,000	$294,861,000

In other words, farmers in 1924 planted four per cent fewer acres, harvested eight and one-half per cent more bushels, and received almost ten per cent less for them than for the crop of 1923. Favorable climatic conditions increased the yield per acre from 109 bushels in 1923 to over 124 bushels in 1924. Supposing the weather conditions had been the same as in 1923, the 1924 crop would have been 399,158,000 bushels, and assuming a similar influence on the market the farm price for the 1924 crop would have been 92 cents per bushel instead of 65 cents, and farmers would have received more than $100,000,000 more for their crop.

How shall we avoid producing a surplus?

The Agricultural Commission

IF THERE are those who expected the agricultural commission appointed by the President to conceive and bring forth a sure and speedy remedy for correcting agricultural ills they will be sadly disappointed upon reading the commission's report to the President. The conference has issued its second report containing recommendations for the attention of the President and the guidance of Congress.

The reports indicate that the conference has acted chiefly as a clearing house for collating the plans of the different agricultural agencies. In fact, each recommendation has been familiar to reading farmers for years, beginning with the trite saying, "Agriculture is the most important industry of America," and closing with the recommendation that the agricultural appropriation bill be passed.

We have no desire to belittle the efforts of the conference. The members of the commission have worked diligently and, we believe, honestly at their task. What we do wish to emphasize is what we stated at the time of the commission's appointment, viz., that the important needs of agriculture were already known and were being urged by agricultural leaders. If the work of the commission will serve to place these matters more definitely before the public, and we believe it will, the work will not have been in vain.

In brief, the recommendations include giving to agriculture the same considerations accorded industry, both in leadership and legislation; the application of the tariff principle so that the American farmer shall have the full benefit of American markets, and disapproving of any move that would tend to stimulate the production of excessive surpluses. The report places most emphasis upon the further development of co-operative marketing plans as being the most feasible means of securing better returns. Thru such organizations, systems of crop regulation, uniform grading practices, and better and more economical distribution could be developed. It recommends that the federal activities should be limited to a "fostering attitude," leaving the co-operatives to develop without governmental interference.

Wheat Price Troubles

IT WAS but a few months ago that the public was listening sympathetically to the troubles of the wheat growers brought on by the then low price of wheat. Today the papers are carrying the news of troubles caused by the high price of wheat. With the present price over two dollars per bushel and May wheat selling in London at two dollars and five cents the English government is considering the question of government control. The world's shortage of wheat has caused keen buying in European countries and the consequent high price strikes hard those countries which are still a long way from pre-war conditions. It is said that in England alone the number of unemployed is yet well over one million. The former supply of cheaper Russian wheat is no longer available so that European importations must come largely from the higher priced markets of the United States and Canada.

Christianity in Business

DR. KENYON L. BUTTERFIELD, a well-known writer and worker in the cause of rural advancement, has an article in a re-cent issue of Christian Work, entitled, " Challenge to the Christian Farmer," which is well worth reading. Primarily his object is to impress upon farmers the necessity of adopting the Christian idea as a basis from which all questions shall be solved. In these days of feverish impatience to succeed financially and the universal willingness to form some kind of co-operative agreement to that end his appeal for the adoption of the Christian way is most timely. While we cannot here re-print the whole article we quote one paragraph which will give a suggestion of the spirit of the article:

"In any program for making the world Christian, the centuries-long emphasis upon the development of the Christian spirit within the man must be forever in the background. It is inconceivable that we can have a social program satisfying from the Christian point of view, without having Christians whose lives are essentially religious. We need both the inner life of religion and the outer life of religion. The most important requirements of modern life are two—prayer and fellowship. By prayer, I am thinking of that form of prayer which constitutes real communion with God; and by fellowship I am thinking, of course, of bringing into all the relations of life the spirit of the square deal, of social justice, of comradeship—in other words the spirit of love and brotherhood. All this is but another way of stating the ancient laws of love toward God and love toward fellow man."

Such talk upon a business subject and from a business point of view would have been considered in perfect order a hundred and more years ago. Of late, however, men have been leaving out the religious point of view (or at least the mention of it), when considering social, economic and political questions. Might it not be well for humanity, in view of the many failures to co-operate successfully, bring into use the great solvent of human troubles—the truly Christian spirit?

Washington Letter

ONGRESSIONAL FARM GROUP ETS.—The present outlook is Congress will do little if any g with the various agricultural awaiting action. Senators and esentatives of the agricultural p met in the Capitol one night ntly at the invitation of Sen- Norris, chairman of the Senate mittee on Agriculture, to review sures for agricultural aid, and ossible concentrate their efforts nd some specific piece of legislation for farm relief. The House Com- ee on Agriculture has indicated it will confine its efforts to the ideration of some of the rec- endations of the President's ag- ltural conference.

AY ACT ON MUSCLE SHOALS. e House has sent the Underwood le Shoals bill to conference be- n the Senate and House, there- trengthening the belief that if Senate can agree on its con- s a bill may be reported out in hed form in time for action this on.

COMMENDS MARKETING RD.—The President's agricul- conference recommends that e be created a Federal Co-opera- Marketing Board of five mem- two members to be the Secre- of Agriculture and the Secre- of Commerce, and three others e appointed by the President names presented by the feder- registered co-operatives. The eting plan urged is a modified er-Williams bill. There is little tation that the recommenda- will be acted upon during this n, but it is certain that they form the basis of future pro- legislation.

SINESS PLANS FARM SUR- .—Some interesting develop- s in agricultural relief propos- ay be expected when the Agri- ral Bureau of the United States ber of Commerce gets into ac- It is preparing a standard of agricultural survey which is ve the purpose of what the doc- would call systematic diagnosis. e Bureau has decided that crop ion and calf clubs will not rem- condition due to a tax system discourages the land owner ncourages tenant farming, nor it compensate for a defective eting system. The standard for agricultural surveys are to be available to commercial izations interested in agricul- improvement.—E. E. Reynolds.

Harrisburg Letter

E AGRICULTURAL BUDGET. mbers of the Legislature re- g to Harrisburg for the open- f the second month of the ses- do not appear to be any more ed with the allotment of money Department of Agriculture in dget just submitted to the gen- ssembly than when they went The suggestion of the Gov- that a million dollars be made ble for the next two-year pe- o get rid of tuberculous cattle been highly commended, but are fears there may be new and rous pests come along before ext Legislature meets and it is ble to have money available.

E BEETLE FUND.—As fore- n this letter some time ago the ance for the Japanese beetle ign is $150,00 or $130,000 than last session. To fight the borer $15,000 is given. These ecific appropriations. Some of gislators think there should be but it is pointed out here the ent will match what ylvania gives.

E CATTLE FUND.—The budg- templates the appropriation of 000 from the general fund of tate to pay for slaughtered ulous cattle, $250,000 more in sight from the dog license Presumably the remainder of g fund is to be devoted to the al work of the Department.

LL PAY FAIRS.—According to tement issued by the Depart- of Agriculture fairs in Pennsyl- will all be certified for payment of state aid this year, altho reports on some of the thirty fairs inspected indicate violations of the spirit of the agreement last summer on character of shows. Warning has been given that inspections will be made during the coming season and fairs with shows considered out of place will be denied state funds.—Hamilton, Harrisburg.

New Jersey Letter

AGE LIMIT TO DRIVE HORSES.—A bill has been introduced in the New Jersey Legislature, which, if passed, would forbid any one under the age of seventeen years to drive a horse attached to a vehicle on the highways. The bill is in the hands of the Judiciary Committee, composed of the Senators from Middlesex, Essex and Hudson Counties. Sponsored by the Society for the Prevention of Cruelty to Animals, the bill was introduced by the Senator from Bergen County as an amendment to the Cruelty of Animals Act. This measure which might be desirable in the city is strongly opposed by the organized farm groups on the grounds that country people under the age of seventeen are usually competent and experienced in driving a horse.

POTATO DEALERS WOULD CO-OPERATE.—As a means of easing the potato situation in central New Jersey several proposals have been advanced for co-operation of central New Jersey potato dealers on the matter of distributing the New Jersey crop. A committee, consisting of I. D. Baird, Sales Manager of the Monmouth County Farmers' Exchange; A. E. Reed, of Tennent; G.A. Bennett, of Hightstown, and Samuel Bennett, of Prospect Plains, has been appointed to work out details for such a plan. The idea of dealer co-operation in handling the New Jersey potato crop has at present both opponents and advocates among the farmers. The three counties involved include Monmouth, Middlesex and Mercer. The idea further proposes that the dealers should work together for standardization of the potatoes which they handle.

T. B. TESTS GAIN.—The testing of purebred dairy herds in New Jersey to locate tubercular reactors has gained considerable ground. The interest in tubercular-free herds has not been confined to northern New Jersey. Interest is keen in several of the southern New Jersey sections.—B.

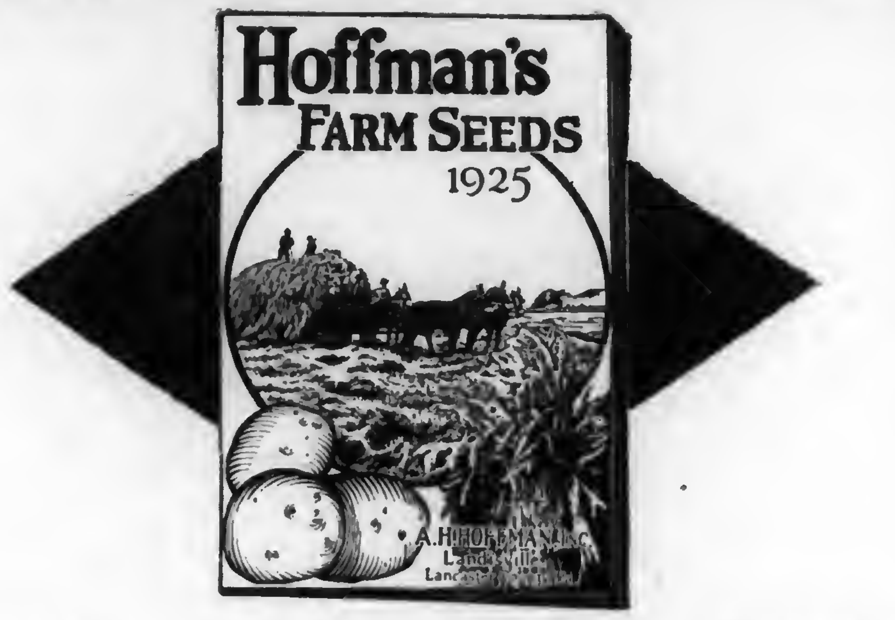
New York Letter

UNUSUALLY COLD WINTER.—After steady cold for some weeks an almost record cold wave grips the state. Fifty degrees below zero is reported in some places, with as low as thirty-two below in southern counties. Suffering is severe, yet might have been worse had there been a wind.

FARMERS TO THE FRONT IN LEGISLATION.—For the first time since the early days of the state farmers are a real factor numerically at the State Capitol. They are now the second largest group. The chairman of the education committee is a farmer, and a number of other key positions are held by farmers. There are twenty-four farmers in the Assembly alone, all Republicans. The finance committee is likely to be headed by a farmer, also the ways and means committee. The president pro tem and the majority leader of the upper house and the speaker of the lower house are of farm interests.

LEADER IN CROPS.—New York finds itself the leader for 1924 in the production of hay, potatoes, apples, onions, green beans and green peas. It stood second in production of grapes, pears, maple sugar and syrup, cauliflower, lettuce and peas for canning.

BETTER MILK PRICE.—The Dairymen's League is now selling all of its milk in fluid form at close to Class 1 prices, meaning better returns to members. It controls over fifty per cent of the milk sold in New York City, handling over 135,000,000 pounds of milk per month.—M. G. F.



Hoffman's FARM SEEDS 1925
A. H. HOFFMAN, INC. Landisville Lancaster

Hoffman's *New* Catalog *FREE*

THIS is more than a Seed-Book. Gives the plain facts on this year's Farm-Seed outlook. Lists all the main-crop Seeds, and only proven varieties of them. Offers pointers of value to most any farmer. Makes it plain why more Eastern Farmers depend on Hoffman's Seeds every year. The one big reason is—*"Hoffman's Seeds Pay!" Sow them this year for your Protection and Profit!*

Before buying your 1925 Seeds, be sure to get this Free Book—it is going to pay you!

Alfalfa—Clover—Timothy— and other Grasses in genuine northern-grown, native Seed. Hardiest strains, free from foul weeds. Tested seed that grows and does well in your section. Costs you but a few pennies more per acre than other ordinary grades would stand you. And is worth much more when results are compared! *Samples free.*

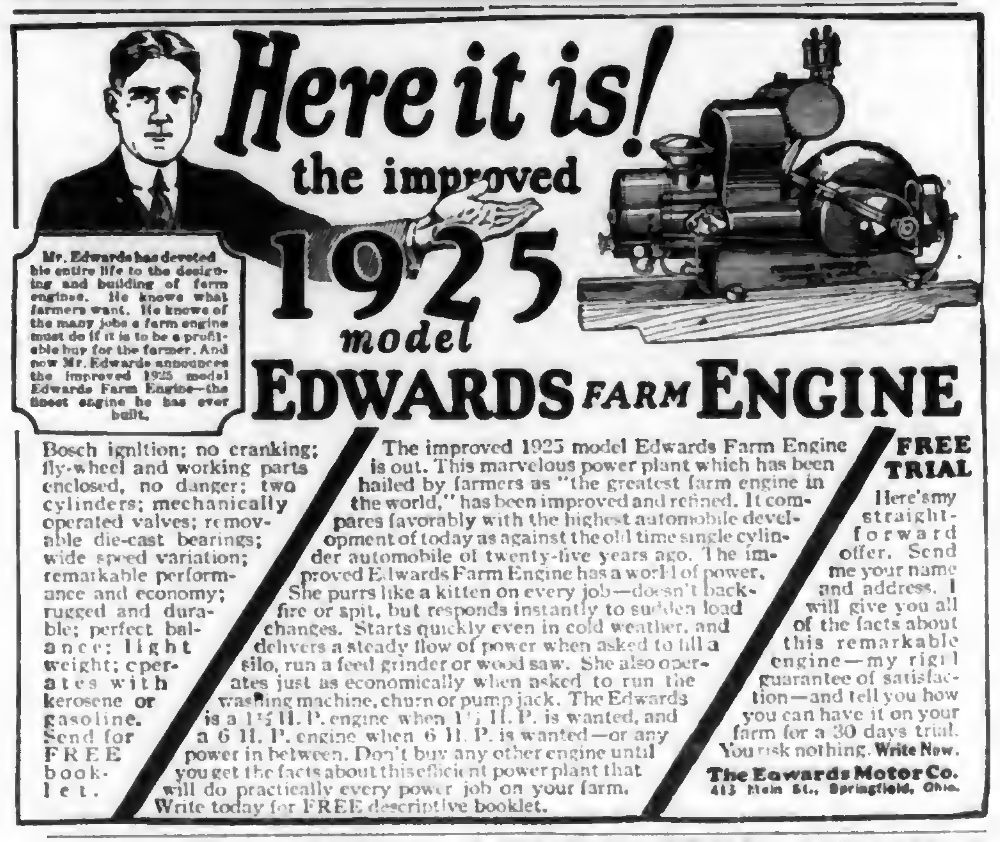
Seed Oats— Seven kinds, 'side' oats and 'sprangle' oats. Reliable yielders—proven so by years of actual use throughout the East. Prices fair. *Samples free.*

Seed Corn— Good, sound, well-cured, tested seed that will grow! Many kinds. For the Silo and for the Crib. **Costs you only about a half-dollar an acre!** Worth many times more, especially this year.

Other Seeds— Potatoes. Barley and the other Spring Grains. Field Peas. Soy Beans. Pasture Grasses. Seeds for green manuring—cover crops—etc. All of extra-good quality.

Write today—Just send your name and address on a Post-card. Mention the Samples you want to see. You'll get them and the Catalog—both free—by quick mail. Buying your Seeds from this List is going to please you and show you a good profit!

A. H. HOFFMAN, Inc.
Box 40 Landisville, Lancaster County, Pa.



Here it is! the improved 1925 model EDWARDS FARM ENGINE

Mr. Edwards has devoted his entire life to the designing and building of farm engines. He knows what farmers want. He knows of the many jobs a farm engine must do if it is to be a profitable buy for the farmer. And now Mr. Edwards announces the improved 1925 model Edwards Farm Engine—the finest engine he has ever built.

Bosch ignition; no cranking; fly-wheel and working parts enclosed, no danger; two cylinders; mechanically operated valves; removable die-cast bearings; wide speed variation; remarkable performance and economy; rugged and durable; perfect balance; light weight; operates with kerosene or gasoline. Send for FREE booklet.

The improved 1925 model Edwards Farm Engine is out. This marvelous power plant which has been hailed by farmers as "the greatest farm engine in the world," has been improved and refined. It compares favorably with the highest automobile development of today as against the old time single cylinder automobile of twenty-five years ago. The improved Edwards Farm Engine has a world of power. She purrs like a kitten on every job—doesn't backfire or spit, but responds instantly to sudden load changes. Starts quickly even in cold weather, and delivers a steady flow of power when asked to fill a silo, run a feed grinder or wood saw. She also operates just as economically when asked to run the washing machine, churn or pump jack. The Edwards is a 1½ H. P. engine when 1½ H. P. is wanted, and a 6 H. P. engine when 6 H. P. is wanted—or any power in between. Don't buy any other engine until you get the facts about this efficient power plant that will do practically every power job on your farm. Write today for FREE descriptive booklet.

FREE TRIAL
Here's my straight-forward offer. Send me your name and address. I will give you all of the facts about this remarkable engine—my rigid guarantee of satisfaction—and tell you how you can have it on your farm for a 30 days trial. You risk nothing. **Write Now.**

WHAT'S A CAPON AND WHY?

A book that explains why Capons are the most profitable part of the poultry business and everything you will ever want to know about CAPONS. 50 pictures from life that show each step in the operation. List of Capon Dealers' addresses. Tells how to prevent "slips," where to get the best and cheapest capon tools. Capons are immense eating. Big profits realized. Get wise. This book tells how. Copyrighted new and revised edition. Regular 50c copy, prepaid to your address (a short time only) for a Dime in coin or stamps. GEORGE BEUOY, R. R. 40, CEDAR VALE, KANSAS.

Seen and Heard at the State Farm Sho

This Annual Winter Exposition Is the Big Event in Pennsylvania Agricult

By THOMAS H. WITTKORN

ONCE again the annual Pennsylvania Farm Products Show, this time the ninth, is a thing of the past, and those who were there have a chance to turn over in their minds the great mass of material which was presented for the eyes and ears. With twenty-sevn organizations meeting during the week and six (counting separate floors) halls filled with farm products, commercial and educational exhibits, it is small wonder the visitor to Harrisburg is bewildered at first as to what he most wants to see and hear.

* * *

According to Daniel N. Casey, Secretary of the Harrisburg Chamber of Commerce, the week of the meetings was the biggest week the city has ever known. The Chamber's housing bureau took care of lodging accommodations for more than 3000 despite the fact the city has 250 more hotel rooms than it had a year ago.

Electric Farm the Feature

By all odds the Electric Farm was the most interesting and most talked about exhibit. About two thousand people each day made the trip in the snow on the electric cars or in automobiles to see the wonders of modern day living. Of course it was not expected that any one person would go home and buy each of the hundred and some odd electric conveniences shown, but it was a vivid picture of present day possibilities. The farm itself was no different from thousands of others in the state but in the house, barn, milk house, chicken house, shed and yard were nearly all the known electrical devices which could be used to advantage.

* * *

Governor Pinchot, when he spoke to the assembled visitors Monday evening said that "Stick together" was the most important thing today for the people on the farm. When they have learned to do this, he said, they can have pretty nearly anything within reason. The Governor renewed his pledge that he would stand back of the farmer and declared that his administration is holding out for the strictest kind of "dry" enforcement. Both these statements brought the warmest kind of applause.

* * *

The busiest man for the week, not forgetting those who handled the details of keeping things running smoothly, at least the man called on to appear before the greatest number of people, was Secretary of Agriculture Frank P. Willits, "Daddy Willits," as the Governor affectionately called him in his speech at the mass meeting Monday evening. Mr. Willits is at heart a dairyman and his long service as president of the Inter-state Milk Producers' Association, as well as his forty years' residence on one farm, allows him to meet his audiences on sympathetic ground and talk as man to man.

Won Pennsylvania Farmer Cup

As usual it would take a whole page to record the doings of the 225 boys and one girl who came from 125 vocational schools. They spent two full days in Harrisburg and were doing something every minute between breakfast at seven o'clock and bedtime rollcall at ten, in the Y. M. C. A., which was their headquarters. Their judging contests in poultry, corn, potatoes, dairy and swine resulted in the Millville Vocational School in Columbia County winning the large silver cup offered as the highest honor each year by the State Chamber of Commerce. The cup offered by Pennsylvania Farmer for the best poultry judging was won by Wesley Snyder, Elders Ridge.

* * *

Dairymen of the state, feeling that the time has come for them to have a state-wide organization of their own, separate from the Breeders' and Dairymen's Association, which has long functioned for the good of the industry, took preliminary steps during the week to walk alone. Prof. A. A. Borland, Dairy Editor of Pennsylvania Farmer and head of the Dairy Husbandry Department at State College, was selected as the temporary president of the new organization, and Robert Brinton, Chester County, was selected temporary secretary. The new organization will be known as the Pennsylvania Dairymen's Association.

Motor Cultivators Satisfactory

Interest in the meetings of the State Vegetable Growers' Association was unusually keen this year. C. H. Nissley, New Jersey vegetable extension specialist, at the opening meeting Tuesday afternoon struck a responsive chord when he told of the extensive trials given last year of the motor cultivators in that state. The little machines were given a chance to show what they would do in practically all soil types of the state and proved satisfactory except in light sand where it was necessary to add extension rims. Thomas F. Biddle, Bustleton, was elected president of the state association for the new year, and W. B. Nissley, State College, was elected secretary.

* * *

There were 1215 dozen eggs on exhibition this year, compared with only 738 dozen last year. Any disappointment felt by the poultry interests because of the last minute cancellation of the poultry show on account of the Fowl Plague was more than made up by the great egg show. Dauphin County captured the silver cup offered for the best county egg exhibit. Lancaster won second place (last year it won the cup) and Chester County was third. In the sweepstakes class George Engle, Middletown, Dauphin County, won for the best dozen white eggs in the show and William T. Cope, West Chester, Chester County, won for the best dozen brown eggs.

Part of the wool exhibit. Vocational school booths in backgro

Must Take a Long Time View

L. J. Taber, master of the National Grange, addressed the mass meeting Monday evening. He impressed on his hearers that in general farm problems are economic and not legislative. To get the most lasting benefits to agriculture, he said, farmers must take a long time view and not rush in to try to cure present difficulties before studying how far the remedy will reach. Better and more efficient agricultural organization is needed, Mr. Taber believes, to give the farmer a large share of the consumer's dollar:

* * *

Sarah Fox, the sixteen-year-old student of the Youngwood Vocational High School, Westmoreland County, could not be blamed for blushing when she was presented to the large gathering at the Monday evening meeting as the one who did the best poultry project in the state. During the year she cared for 170 laying hens and raised 685 chicks with a profit to herself, after allowing for all costs, of $387.41.

* * *

The potato display was larger than ever before and spoke louder than words as to what the continued educational work the past few years has meant to the producers. There were 150 entries by adults and 204 from Pennsylvania boys and girls. The counties which are producing certified seed, and Pennsylvania now ranks second in this matter, attractive showings as well a of the commercial companies a specialty of seed potatoes. four sessions of the Potato G Association were well attende a lively interest shown in th cussions. Prof. E. L. Nixon a the medals to the members o "400" Club and some of them a few hints as to how they gre big crops.

New Officers of Women's So

Undoubtedly more than this graph will be told of the three meetings of the Society of Women of Pennsylvania. They ed Tuesday morning with ad by Deputy Secretary of Agri J. M. McKee and M. T. Phill before Thursday evening ha formal luncheons, lots of g tertainment, many speakers other organizations and seve cational talks by women. At nual business meeting Th morning Mrs. John F. Hice, C County, was elected president ceed Mrs. F. B. Black who o the society ten years ago a been its president ever since. May Hoover, Somerset Coun elected secretary.

* * *

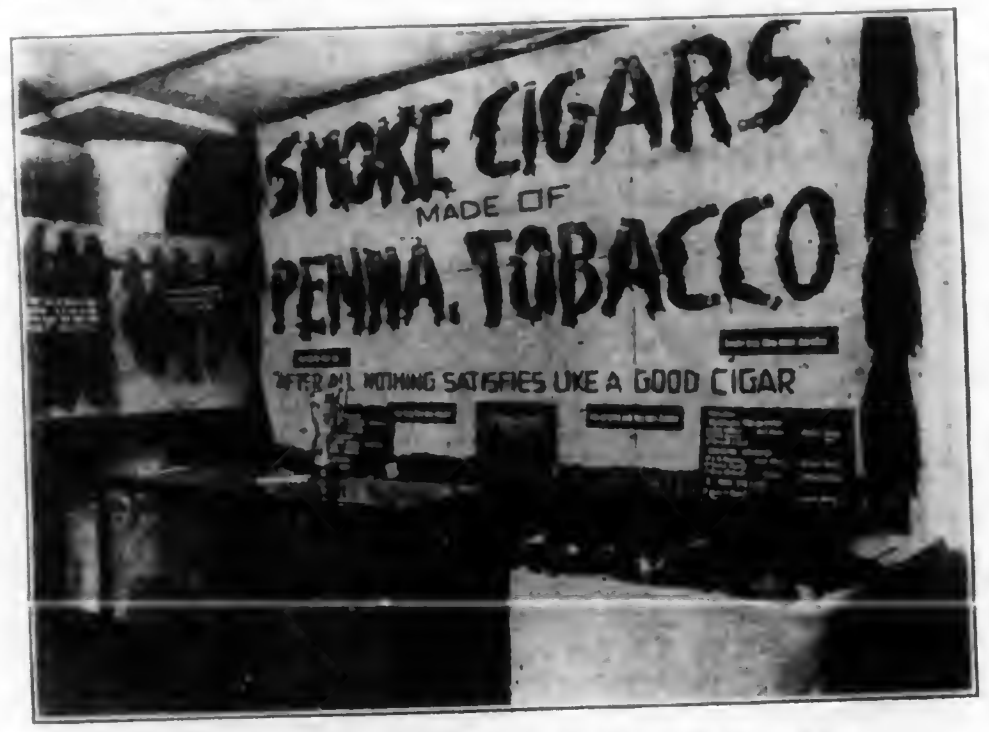
The exhibit of a number of wild animals by the State Commission under the directi E. Logue, its trapping exp tracted unusual attention. sized bobcat, which had be tured the Monday morning week in Clinton County, was elty to many farmers Tw of the kind which are givi growers so much trouble in sections, as well as foxes, raccoons and rabbits, added logical atmosphere to the fa uct show which it has lack years. A number of specim beaver cuttings were shown dence that these animals, wh being stocked by the commiss at work.

Minneapolis and St. Paul a at it. Something must be do those two towns. This one from St. Paul:

A Minneapolis man drift the sister city, looked super ly at the fruiter's display, pi a big watermelon and asked sneer:

"Is this the largest apple y in St. Paul?"

"Hey!" bellowed the pr "put that grape down!"



This big sign was made entirely of leaf tobacco and cigars.

Systematic Research —*the Only* Solution

THE case of farm electrification was summarized as follows in a report presented at the eighteenth annual meeting of the American Society of Agricultural Engineers, by Mr. R. W. Trullinger, Specialist in Rural Engineering, Office of Experiment Stations of the U. S. Department of Agriculture:

"The convenience, safety, ease of control and general flexibility of electrical power are such great arguments in its favor as to justify the most extreme efforts to extend its use generally to agriculture.

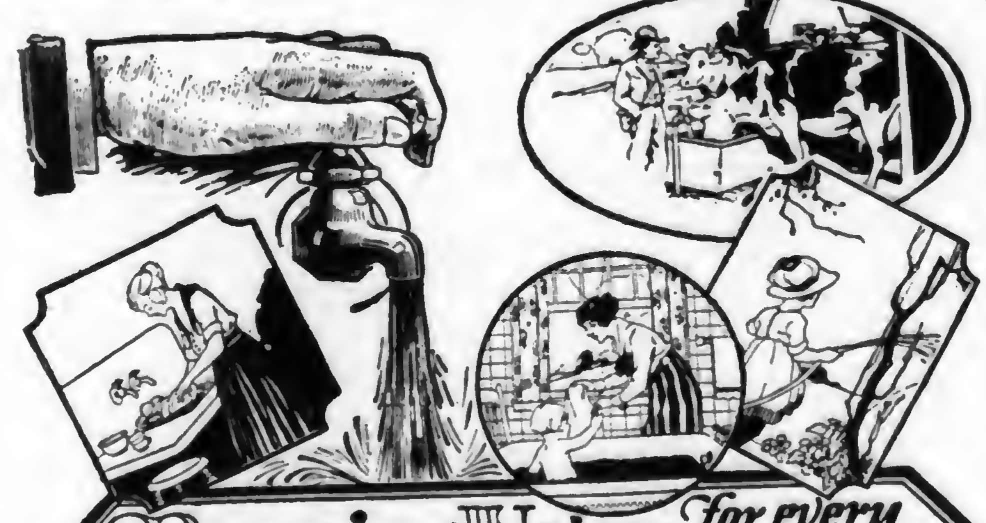
"To do this profitably it must be done intelligently. To do it intelligently all the facts regarding the exact requirements of agricultural processes and practices must be known.

"Since it is obvious that these facts are not generally known with reference to the use of electricity as the source of energy, the only solution is to resort to systematic research and investigation following a rational and intelligently prepared program."

The National Committee on the Relation of Electricity to Agriculture has framed a program along these lines calling for experimental research in farm electrification. This work already is under way in thirteen states, each of which has a committee composed of farmers, farm experts, electrical engineers, agricultural engineers and others.

The Committee on the Relation of Electricity to Agriculture is composed of economists and engineers representing the United States Departments of Agriculture, Commerce and the Interior, American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Farm Lighting Manufacturing Association, and the National Electric Light Association.

NATIONAL ELECTRIC LIGHT ASSOCIATION



Running Water for every Farm

City water service at a fraction of city water cost! Handy and hot for kitchen and bath. Cool and convenient for drinking and for stock. Plenty of pressure for garden and fire protection. Whatever your water supply, well, lake, cistern, spring — it can be brought as close to you as the nearest faucet.

Hoosier Water Service is easy and inexpensive to install. Can be put into new or old homes without remodeling or rebuilding. A size to meet any need. Driven by any power that's convenient— electricity, gasoline, wind or hand. Protected from rust inside and out by the superior GALVAZINK process.

Sold through reliable retail merchants. Ask your dealer about it.

Free Book

"How to Have Running Water"—a book of unusual value in solving your water problem. Tells you what Hoosier Service will do and HOW. Complete information on how to select the type that suits your needs. Just send your name and address. No obligation.

Electricity—the New Help

(Continued from page 3)

perhaps the waffle-iron or egg cooker. The multiple table socket makes it easy to use several devices at once.

Dish-washing comes once a day only, thanks to the electric dishwasher. Your stock of dishes doesn't dwindle away or get hopelessly nicked as it did in the old dish-towel days.

Wash-day and ironing-day have decided to co-operate, where once they insisted on having a day apiece. Washing with the electric washer "isn't really washing at all" as the president of the Society of Farm Women pointed out. It just does itself, and even the most encrusted pair of overalls can't resist it. The electric ironing machine can be trusted with simple dresses and blouses, no less than with the pieces described as "flat." Moreover it persuades the most conservative woman that she can do her ironing sitting down; and when its own job is done, it helps in the general work by turning itself into a table. If special touches are needed for dainty trimmings, the ironing machine will forgive you if you turn to the electric iron.

The Picture on Page One

THE picture on the first page of this issue shows the electric refrigerator in the kitchen at the Electric Farm. The thermostat-controlled mechanism not only keeps the interior of the refrigerator at a uniformly low temperature, but it freezes ice in neat little cubes for use by the housewife. In the illustration one of the two pans in which ice is made is being removed from the refrigerator.

Good News for the Men

Old-fashioned house-cleaning orgies never come any more. (Men, take notice!) Thanks to the vacuum cleaner, we now keep clean instead of having to get clean. And those dusty clothes of the returned traveler,—the vacuum clothes-brush will make them like new, if you just press the button.

You won't need any time to speak of, for polishing silver or other metals. That exhaust fan over the kitchen door not only carries out all cooking smells, but keeps the kitchen so well aired that metals do not tarnish.

If your visit is in summer, you will start other fans besides the exhaust fan, so that the air in which you work will always be in motion.

And now you'll put it up to the electric range to get supper! You'll set an alarm for somebody who is sure to get up when you indicate on this clock just when you want the oven to start heating. On the oven dial you'll set the hand at the temperature you want for your cooking. Then you'll put a tasty stew in the oven, and start off serenely for your Ladies' Aid meeting. Long before you return, that faithful alarm clock has warned Mr. Range (or is it Mrs.?) to get busy. The heat is automatically turned on. When it reaches the point you have indicated on the dial, it shuts itself off, and cooking is completed by the heat that has been collected,—just as in a fireless cooker.

Can Make Your Own Ice in July

A corn pudding, all ready but the meringue, is waiting in the pantry. While beginning to set the table, you start your electric beater and let it make your meringue. There will be plenty of heat in the oven, when you remove your meat-and-vegetable dish, to brown your meringue to just the delcate color you like best.

Or, playing again that it is summer, your electric refrigerator produces delectable cubes of ice for a fruit punch or a chilled salad or dessert,—not to mention milk and cream that came chilled from the electric cooler in the milk house.

Preparing for an evening with the Grange, you want to look specially beautiful. You have finished your new dress on the electric sewing-machine. You wash your hair, and dry it quickly with the electric dryer, while your husband indulges in an electric shave.

Just as you are starting, you find that the frosting on the cake you are taking, is sticky. Five minutes' worth of air blown over it by the hair dryer, turns the trick. Your cake is beautiful and so are you. Armed with your self-generating flashlight you depart for the Grange meeting.

Sounds like a fairy-tale, doesn't it? But a fairy-tale that can be made to come true if everyone concerned gets back of the campaign for bringing power to the farms.

Old Stand-bys Needed, Too

These new devices need not drive out the old stand-bys. In the outkitchen of the Rutherford home there is a brick fireplace as old as the house, into which at some later time a great range was built. Wood fires heat water and cook apple butter in mammoth iron kettles. Can you imagine butchering time or apple-butter time without that fire and kettle? Even the latest word in water systems and heating systems cannot wholly replace them. But the old and the new can each fill a place and exist very companionably side by side.

"What did you like best in the exhibit," was asked a home-maker who had been studying it with care. Her reply was a bit disappointing. "Oh everything," she said. That woman wasn't really prepared to buy to the best advantage. Not all the devices are equally suitable for all households. Perhaps that is fortunate in view of their cost. Some you can't afford to get; others you can't afford not to get.

This exhibit offered a unique opportunity thru the household tests that the Rutherford family were giving the devices. "The proof of the pudding is chewing the string." So the proof of the electric fireless cooker was seeing the pie that was baked in it,—not by a commercial demonstrator, but by a home woman under home conditions at their worst,—that is, in a time of confusion and excitement. Any device and any person that can turn out good work under such handicaps must emphatically be worth something!

Mark Twain Got Results

Mark Twain once sat in the smoking-room of a steamer and listened for an hour to some remarkable stories. Then he drawled: "Boys, these facts of yours that you've been telling about recall an adventure of my own in Hannibal. There was a fire in Hannibal one night, and old man Hankinson got caught in the fourth story of the burning house. It looked as if he was a goner. None of the ladders was long enough to reach him. The crowd stared at one another with awed eyes. Nobody could think of anything to do.

"Then, all of a sudden, boys, an idea occurred to me. 'Fetch a rope!' I yelled.

"Somebody fetched a rope and, with great presence of mind, I flung the end of it to the old man. 'Tie her around your waist!' I yelled. Old man Hankinson did so, and I pulled him down."

"Standard" PLUMBING FIXTURES

Cheerful, Convenient, Work-Saving

THE farm kitchen is a busy place. Much of the housewife's time is spent in it. A modern kitchen sink not only improves the appearance and convenience of the kitchen, but aids the housewife to handle her work quicker and more easily every day in the year.

"Standard" kitchen sinks "yardstick high" provide comfort and prevent backstrain. They are made in a variety of styles and sizes—all illustrated and described in the catalogue "Standard" Plumbing Fixtures for the Home."

Standard Sanitary Mfg. Co.
Pittsburgh

Write today for this 64-page book and use it when making a selection of your new convenient kitchen sink and other modern plumbing fixtures. Sent free on request.

Reap the Profits
of More and Better Potatoes with
POTTER COUNTY SEED

Potato Growers Say:

"Potter County Certified Seed grew more than twice as much as my own seed."

"The best grade of potatoes ever produced in this vicinity."

Better grade potatoes bring you a premium on the markets. Potter County Potatoes (fancy table stock) always bring a premium on Philadelphia and New York Markets.

Potter County Certified Potatoes also gave a substantial increase in bushels over native stock when used in Pennsylvania, New York and Ohio. Potato growers of Montgomery County, Pennsylvania, sowed two carloads of Potter County Certified Seed Potatoes last year and have ordered five carloads this year.

In Butler County, Pennsylvania, a carload of Potter County Certified Disease Free Seed was distributed among 200 Club boys. 177 reported an average yield of 194.2 bu. per acre, while ordinary seed in Butler County averaged only 85 bu. per acre.

Potter County Certified Seed is a Profitable Investment

You grow more bushels per acre and get a premium for better stock.

Our 80,000 Bushel Storehouse

is the most complete seed potato storage in the country. It is frost proof and ventilated. Experts are in daily attendance. Every potato comes out in good condition.

All seed potatoes that are ordered now will be stored here for spring delivery.

Bred for Seeding Purposes

The Erway strain of Rural Russets and Potter County White Rurals are bred especially for seeding purposes under the direction of experts from Pennsylvania State College. They are grown in an altitude over 200 feet on Dekalb soil where the crop is favored with a short cool season and abunnant rainfall. *This makes hardy stock* and the finest kind of seed.

Disease Free

Every possible means known to science has been used to eliminate and control disease. They are examined and graded in the field—before going into the storehouse—and before shipment. They are disease free and of the highest grade for seeding

Inspected and Certified

Grown under the direction of the Farm Bureau and approved by the Pennsylvania State College and Pennsylvania Department of Agriculture.

Get in touch with us now and take advantage of present low prices and low freight rate on this hardy seed. Remember we store all seed in our big storehouse and will deliver when you want it.

We stand squarely back of our seed stock Buy direct from the grower.

Spinach Growers Need Improved Savoy Strain

THERE has been a great deal of discussion this winter as to the value for general planting of the Virginia Savoy spinach, which has been tried out, and planted commercially, in many northern localities in the last three years. This variety is the one that was bred by the Virginia Truck Experiment Station at Norfolk, the aim being to get a variety that would not suffer from the yellows disease in fall. The Virginia Savoy is a child of a hardy Siberian spinach that is resistant to the disease, and of an American type having the desirable Savoyed leaves but with no resistance whatever.

Goes to Seed Too Quickly

The new variety is resistant and no mistake, but many growers complain that it goes to seed too soon for use in early fall or spring. There is, of course, less excuse for its use in spring than in fall, because the yellows disease prevails only in fall. Still, a variety that goes to seed quickly is never desirable for any season, because unseasonably warm weather may ruin its market value even in late fall.

Moreover, altho Virginia Savoy has not been recommended for spring planting, yet is is so hardy, when compared to most of the varieties we have been used to planting, that there are times when we would like to plant it in late fall for maturity in spring. This method of plantin usually guarantees a spring crop fr from seed stalks because the crop i cut before the spring sown crop c be matured.

New Types May Remedy Trouble

In the case of very warm and dr weather in spring, however, eve the fall sown crop makes seed stalk and in any case it is very handy t be able to cut the spring crop ove a period of ten days or two wee if market conditions or rainy wea er require it. Ten days might eas ruin a crop of Virginia Savoy, of th kinds we have been planting the la few years.

I understand now, however, th improved strains are on their wa from Norfolk. That is, such strain have been produced, with the aim curing this bad seed-forming ha If these strains retain the hardin and the disease resistance of the o er strains, the new types ought be nearly ideal for all fall planti and also for the planting made fall for maturity in spring.

Spinach growers will hope that improved Virginia Savoy will only be better than the old one, that it will manage to pass thru hands of commercial seed grow year after year, without losing ha iness, ability to stand long with forming seed stalks, and disease sistance.—W. C. P.

Farm Organization Officers

LISTED below are the newly elected officers of Pennsylvania agricultural organizations that held elections during the week of the State Farm Products Show in Harrisburg.

Pennsylvania State Council of Agricultural Organizations.—M. T. Phillips, Pomeroy, Pres.; Miles Horst, Lebanon, V. Pres.; J. M. McKee, Harrisburg, Sec.-Treas.; C. J. Tyson, Floradale; Fred Brenckman, Harrisburg. These five men constitute the executive committee.

Pennsylvania Dairymen's Association.—A. A. Borland, State College, Pres.; Robert F. Brinton, West Chester, Sec.-Treas.

Pennsylvania Federation of Holstein Clubs.—L. H. Thompson, South Montrose, Pres.; F. D. Kerrick, Towanda, V. Pres.; G. H. Truckell, Harrisburg, Sec.-Treas.

Pennsylvania Jersey Cattle Club.—W. F. Shrum, Jeanette, Pres.; Harry Hayward, Devon, 1st V. Pres.; C. S. Fox, Pocopson, Sec.-Treas.

Pennsylvania Ayrshire Breeders' Association.—W. F. Glatfelter, Spring Grove, Pres.; Henry Fielden, Bedford, Sec.; John Cochran, Rosemont, Treas.

Pennsylvania Guernsey Breeders' Association.—State Executive Committee: C. W. Koser, Biglerville; R. H. Power, Glenshaw; J. W. Mayes, Howard; M. T. Grimes, Catawissa.

Pennsylvania Berkshire Breeders' Association.—Mrs. E. R. Fritsche, Merion, Pres.; W. F. Rischel, Center Hall, V. Pres.; J. P. Winslow, Brookville, Sec.-Treas.

Pennsylvania Duroc-Jersey Breeders' Association.—Frank McCrea, Blairville, Pres.; A. S. Frommeyer, Chambersburg, V. Pres.; H. G. Niesley, State College, Sec.; W. H. Mertz, Northumberland, Treas.

Pennsylvania Chester White Breeders' Association.—R. L. Munce, C nonsburg, Pres.; M. E. Knouse, B lerville, Sec.

Pennsylvania Poland China Bre ers' Association.—C. A. Stark, V derbilt, Pres.; R. E. Bowersox, Clure, V. Pres.; C. L. Romberg Uniontown, Sec.; D. H. Strick Mifflinburg, Treas.

Pennsylvania Sheep Breeders' Wool Growers' Association.—R. Munce, Cannonsburg, Pres. W. Connell, State College, Sec. Treas.

Pennsylvania Poultry Associat —J. W. Parks, Altoona, Pres.; W. W. Livingood, Robesonia, Pres.; H. O. Numbers, Loretta, H. B. Munroe, State College, Tr

Pennsylvania Beekeepers' Asso tion.—Albert T. Keil, Mars, Pr T. J. Strittmatter, Bradley Junct V. Pres.; Charles N. Green, Ha burg, Sec.-Treas.

State Horticultural Association Pennsylvania.—H. C. Brinton, over, Pres., S. L. Smedley, New Square, V. Pres.; S. W. Fletch State College, Sec.; E. W. Tho King of Prussia, Treas.

State Vegetable Growers' As tion of Pennsylvania.—Thomas dle, Bustleton, Pres.; W. C. Nis State College, Sec.

Pennsylvania Potato G sociation.—R. W. Lohr, Bos Pres.; R. J. Walton, Hummelsto V. Pres.; Miles Horst, Lebanon, S Treas.

Pennsylvania Co-operative F ers' Federation.—J. G. Miller, P Grove Mills, Pres.; J. P. Yo Chambersburg, V. Pres.; N. R enberger, Doylestown, S Treas

Awards on Honey

FOLLOWING are the principal prize winners in the honey classes at the 1925 Pennsylvania Farm Products Show.

CLASS 1—Light comb honey not less than twelve sections: 1, D. C. Gilham, Schuylkill Haven, $5; 2, A. B. McGuire, Meadville, $3.

CLASS 2—Dark comb honey not less than twelve sections: 1, A. B. McGuire, Meadville, $5; 2, D. C. Gilham, Schuylkill Haven, $3.

CLASS 3—Light extracted honey not less than ten pounds: 1, I. L. Barton, Townville, $5; 2, Enos H. Hess, Grantham, $3.

CLASS 4—Amber extract honey not less than ten pounds: 1, Robert Conn, Roaring Branch, $5; 2, L. H. Lindesmith, Lehmaster, $3.

CLASS 5—Dark extracted honey not less than ten pounds: 1, D. C. Gilham, Schuylkill Haven, $5; 2, Treesdale Farm, Mars, $3.

CLASS 6—Beeswax not less than five pounds; 1, Robert Conn, Roaring Branch, $2: 2, I. L. Barton, Townville, $1.50.

CLASS 7—Individual collection of honey, wax and honey products: 1, D. C. Gilham, Schuylkill Haven, $5: 2, Edwin J. Anderson, Ridgway, $3.

CLASS 8—Culinary products in which honey has been substituted for sugar: A—Loaf Cake, 1, Mrs. D. T. Rush, Strawberry Ridge, $2. B—Layer Cake: 1, Enos H. Hess, Grantham, $2; 2, A. B. McGuire, Meadville, $1.50; 3, Mrs. D. T. Rush, Strawberry Ridge, $1. C—Cookies: 1, Sallie A. Christman, Zionville, $2; 2, Treesdale Farms, Mars, $1.50; 3, Harold Hoye, New Castle, $1; 3, A. A. Leiden, St. Lawrence, $1. D—Bread: 1, Mrs. D. T. Rush, Strawberry Ridge, $1.50. E—Vinegar: 1, Edwin J. Anderson, Ridgway, $2; 2, P. M. Beam, Carlisle, $1.50.

SPECIAL CLASS—Culinary products in which honey has been substituted for sugar. Pumpkin Pie: 1, P. M. Beam, Carlisle. Baked Beans: 1, P. M. Beam, Carlisle. Canned Beets: 1, P. M. Beam, Carlisle. Baked Apples: 1, P. M. Beam, Carlisle. Crullers: 1, Harold Hoye, New Castle.

CLASS 9—Honey candy, not less than one pound: 1, A. B. McGuire, Meadville, $2; 2, D. C. Gilham, Schuylkill Haven, $1.50; 3, Mrs. D. T. Rush, Strawberry Ridge, $1.

CLASS 10—Best county or association collective exhibit of honey, wax and honey products: 1, Cumberland County Beekeepers Assn., P. M. Beam, Secretary-Treasurer, Carlisle, $20; 2, Lycoming County Beekeepers Assn., P. A. McGowan, Secretary-Treasurer, Williamsport, $15; 3, Allegheny Beekeepers Assn., A. T. Keil, Secretary-Treasurer, Mars, Butler County, $10.

Jersey Short Courses

THE College of Agriculture, State University of New Jersey, has arranged to give short courses of one week's duration in the following subjects:

Dairy and Livestock Feeding, Milk Testing, Poultry Feeding, and Ice Cream Making. The courses are so arranged that, with the lecturers and laboratory work given, students will have the opportunity of getting the best of the essentials in the given subjects. Men and women who are engaged in these lines of business will be amply repaid by the practical, up-to-date teaching which the College is prepared to give.

The courses will be presented the last week in February, 23 to 28, and those interested should write to F. G. Helyar, Director of Short Courses, New Brunswick, N. J. No tuition will be charged, except the registration fee of two dollars. For the course in ice cream making this will be five dollars. To non-residents of New Jersey these fees will be doubled.

"My son," said the father impressively, "suppose I should be taken away suddenly, what would become of you?"

"Why," said the son irreverently, "I'd stay here; the question is, What would become of you?"—Prairie Farmer.

AA
QUALITY
FERTILIZERS
"The World's Best by Every Test"

What Does "AA QUALITY" Mean?

"AA" means the highest *financial* rating in business:

"AA QUALITY" means the highest *quality* rating in commodities:

"AA QUALITY" FERTILIZERS mean fertilizers that have the highest *quality* rating:

because

They have the greatest crop-producing powers, being the result of long, practical experience and scientific research.

The plant foods they contain are selected and formulated with special reference to the requirements of each crop.

They are thoroughly manufactured, blended and cured and are therefore in perfect mechanical condition.

Their record of continuous success covers a period of over half a century.

"AA QUALITY" FERTILIZERS are therefore
"The World's BEST by Every Test"

METCALF'S
Seeds of known Origin

It pays to know where your seeds come from. We *guarantee* the origin of all Metcalf's Seeds to be exactly as stated. Our Clover Seed is genuine American-grown, not European. Our Alfalfa Seed is also domestic northern-grown, hardy and dependable. Our "Grimm" Alfalfa is really "Grimm," purchased direct from a farmers' association in Idaho, branded and sealed. "Look for the Tag on Every Bag" of Metcalf's Seeds, telling the analysis.

OATS Canadian-Grown Alberta Cluster

A Cluster (not a Tree variety) imported direct from Northwest where these Oats attain great vigor. The kernels have thin hulls and big fat meats. Measured bushels often weigh 48 lbs. Yields of 80 bushels per acre are frequent. Packed in three-bushel heavy bags. Freight paid on 9 bushels or more. Bags free.

CLOVER American-Grown Medium Red

We guarantee every bag of our Medium Red and Mammoth Clover to be genuine American-grown. This Seed is hardier and far safer than the European Seed now being widely offered. Every bag of our seed carries analysis tag stating purity and germination of the contents. Freight paid on one bushel or more. Bags free.

"Good Equipment Makes a Good Farmer Better"

McCormick-Deering
P & O Horse and Tractor Plows

Walking Take the handles of a McCormick-Deering P & O walking plow and follow it once across the field, and you will realize what P & O designers have learned in their eighty years of plow building. They know how to build a walking plow that will run true and stay in the furrow without having to be held there. McCormick-Deering P & O Plows are right in quality, right in balance, and right in workmanship.

Riding P & O riding plow features are celebrated among plowmen. See the Diamond, sulky or gang, with its high-lift, double-bail, powerful foot lift, light draft, automatic rear-wheel control, and quick detachable shares. Any boy big enough to reach the foot trip, and old enough to drive, can operate this P & O. Riding plows for all soils and fitted with bottoms as near perfect as man can make them.

Tractor The famous Little Genius in two, three, and four-furrow, with 10, 12 or 14-inch bottoms, any style. The Little Wonder two-furrow, 14-inch for small tractors. Disk plows for stubborn soils. For the most satisfactory power farming, put the McCormick-Deering P & O Plow and the McCormick-Deering Tractor together. Each is made to fit the other.

See the McCormick-Deering Dealer and Insist on P & O

This is the key
NITRATE OF SODA
to profitable FARMING

DO YOU KNOW that for every pound of Phosphoric Acid taken from the soil, a Cotton crop takes three pounds of Nitrogen, Tobacco takes six pounds of Nitrogen, Apples and Timothy take five pounds of Nitrogen, Corn takes two and one-half pounds of Nitrogen, Wheat and Potatoes two pounds of Nitrogen.

Practically all commercial fertilizers contain more Phosphoric Acid than Nitrogen.

Therefore it becomes necessary to add more Nitrogen to prevent soil starvation. This is why

IT PAYS TO USE
NITRATE OF SODA
100 pounds to 300 pounds per acre

Your farm is running down in fertility unless you are putting back each year as much Nitrogen as you take out of it in your crops. This explains why the use of immediately available Nitrogen in Nitrate of Soda, to supply the deficiency shows such surprisingly large increase in the crops on which it is used.

These offices are maintained to furnish authentic information and render all possible assistance to farmers in their fertility problems.

If you want our bulletins or need information about the use of Nitrate of Soda, or if you cannot readily secure the nitrate you require, write our nearest office. For our information please add the number 2328

Reap the Profits

of More and Better Potatoes with

POTTER COUNTY SEED

Potato Growers Say:

"Potter County certified Seed grew more than twice as much as my own seed."

"The best grade of potatoes ever produced in this vicinity."

Better grade potatoes bring you a premium on the markets. Potter County Potatoes (fancy table stock) always bring a premium on Philadelphia and New York Markets.

Potter County Certified Potatoes also gave a substantial increase in bushels over native stock when used in Pennsylvania, New York and Ohio. Potato growers of Montgomery County, Pennsylvania, sowed two carloads of Potter County Certified Seed Potatoes last year and have ordered five carloads this year.

In Butler County, Pennsylvania, a carload of Potter County Certified Disease Free Seed was distributed among 200 Club boys. 177 reported an average yield of 194.2 bu. per acre, while ordinary seed in Butler County averaged only 85 bu. per acre.

Potter County Certified Seed is a Profitable Investment

You grow more bushels per acre and get a premium for better stock.

Our 80,000 Bushel Storehouse

is the most complete seed potato storage in the country. It is frost proof and ventilated. Experts are in daily attendance. Every potato comes out in good condition.

All seed potatoes that are ordered now will be stored here for spring delivery.

Bred for Seeding Purposes

The Erway strain of Rural Russets and Potter County White Rurals are bred especially for seeding purposes under the direction of experts from Pennsylvania State College. They are grown in an altitude over 200 feet on Dekalb soil where the crop is favored with a short cool season and abundant rainfall. *This makes hardy stock* and the finest kind of seed.

Disease Free

Every possible means known to science has been used to eliminate and control disease. They are examined and graded in the field—before going into the storehouse—and before shipment. They are disease free and of the highest grade for seeding

Inspected and Certified

Grown under the direction of the Farm Bureau and approved by the Pennsylvania State College and Pennsylvania Department of Agriculture.

Get in touch with us now and take advantage of present low prices and low freight rate on this hardy seed. Remember we store all seed in our big storehouse and will deliver when you want it.

We stand squarely back of our seed stock Buy direct from the grower.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

Spinach Growers Need Improved Savoy Strain

THERE has been a great deal of discussion this winter as to the value for general planting of the Virginia Savoy spinach, which has been tried out, and planted commercially, in many northern localities in the last three years. This variety is the one that was bred by the Virginia Truck Experiment Station at Norfolk, the aim being to get a variety that would not suffer from the yellows disease in fall. The Virginia Savoy is a child of a hardy Siberian spinach that is resistant to the disease, and of an American type having the desirable Savoyed leaves but with no resistance whatever.

Goes to Seed Too Quickly

The new variety is resistant and no mistake, but many growers complain that it goes to seed too soon for use in early fall or spring. There is, of course, less excuse for its use in spring than in fall, because the yellows disease prevails only in fall. Still, a variety that goes to seed quickly is never desirable for any season, because unseasonably warm weather may ruin its market value even in late fall.

Moreover, altho Virginia Savoy has not been recommended for spring planting, yet is is so hardy, when compared to most of the varieties we have been used to planting, that there are times when we would like to plant it in late fall for maturity in spring. This method of plant usually guarantees a spring crop from seed stalks because the crop cut before the spring sown crop be matured.

New Types May Remedy Trouble

In the case of very warm and dr weather in spring, however, eve the fall sown crop makes seed stalk and in any case it is very handy be able to cut the spring crop o a period of ten days or two week if market conditions or rainy weat er require it. Ten days might ea ruin a crop of Virginia Savoy, of th kinds we have been planting the l few years.

I understand now, however, t improved strains are on their from Norfolk. That is, such str have been produced, with the aim curing this bad seed-forming ha if these strains retain the hardin and the disease resistance of the o er strains, the new types ought be nearly ideal for all fall plant and also for the planting made fall for maturity in spring.

Spinach growers will hope that improved Virginia Savoy will only be better than the old one, that it will manage to pass thru hands of commercial seed grow year after year, without losing ha iness, ability to stand long with forming seed stalks, and disease sistance.—W. C. P.

Farm Organization Officers

LISTED below are the newly elected officers of Pennsylvania agricultural organizations that held elections during the week of the State Farm Products Show in Harrisburg.

Pennsylvania State Council of Agricultural Organizations. — M. T. Phillips, Pomeroy, Pres.; Miles Horst, Lebanon, V. Pres.; J. M. McKee, Harrisburg, Sec.-Treas.; C. J. Tyson, Floradale; Fred Brenckman, Harrisburg. These five men constitute the executive committee.

Pennsylvania Dairymen's Association.—A. A. Borland, State College, Pres.; Robert F. Brinton, West Chester, Sec.-Treas.

Pennsylvania Federation of Holstein Clubs.—L. H. Thompson, South Montrose, Pres.; F. D. Kerrick, Towanda, V. Pres.; G. H. Truckell, Harrisburg, Sec.-Treas.

Beam, Secretary-Treasurer, Carlisle, $20; 2, Lycoming County Beekeepers Assn., P. A. McGowan, Secretary-Treasurer, Williamsport, $15; 3, Allegheny Beekeepers Assn., A. T. Keil, Secretary-Treasurer, Mars, Butler County, $10.

Jersey Short Courses

THE College of Agriculture, State University of New Jersey, has arranged to give short courses of one week's duration in the following subjects:

Dairy and Livestock Feeding, Milk Testing, Poultry Feeding, and Ice Cream Making. The courses are so arranged that, with the lecturers and laboratory work given, students will have the opportunity of getting the best of the essentials in the given subjects. Men and women who are engaged in these lines of business will be amply repaid by the practical, up-to-date teaching which the College is prepared to give.

The courses will be presented the last week in February, 23 to 28, and those interested should write to F. G. Helyar, Director of Short Courses, New Brunswick, N. J. No tuition will be charged, except the registration fee of two dollars. For the course in ice cream making this will be five dollars. To non-residents of New Jersey these fees will be doubled.

"My son," said the father impressively, "suppose I should be taken away suddenly, what would become of you?"

"Why," said the son irreverently, "I'd stay here; the question is, What would become of you?"—Prairie Farmer.

THE AMERICAN AGRICULTURAL CHEMICAL COMPANY
AA QUALITY

FERTILIZERS

"The World's Best by Every Test"

What Does "AA QUALITY" Mean?

"AA" means the highest *financial* rating in business:

"AA QUALITY" means the highest *quality* rating in commodities:

"AA QUALITY" FERTILIZERS mean fertilizers that have the highest *quality* rating:

because

They have the greatest crop-producing powers, being the result of long, practical experience and scientific research.

The plant foods they contain are selected and formulated with special reference to the requirements of each crop.

They are thoroughly manufactured, blended and cured and are therefore in perfect mechanical condition.

Their record of continuous success covers a period of over half a century.

"AA QUALITY" FERTILIZERS are therefore *"The World's BEST by Every Test"*

METCALF'S
Seeds of known Origin

It pays to know where your seeds come from. We *guarantee* the origin of all Metcalf's Seeds to be exactly as stated. Our Clover Seed is genuine American-grown, not European. Our Alfalfa Seed is also domestic northern-grown, hardy and dependable. Our "Grimm" Alfalfa is really "Grimm," purchased direct from a farmers' association in Idaho, branded and sealed. "Look for the Tag on Every Bag" of Metcalf's Seeds, telling the analysis.

OATS Canadian-Grown Alberta Cluster

A Cluster (not a Tree variety) imported direct from Northwest where these Oats attain great vigor. The kernels have thin hulls and big fat meats. Measured bushels often weigh 48 lbs. Yields of 80 bushels per acre are frequent. Packed in three-bushel heavy bags. Freight paid on 9 bushels or more. Bags free.

CLOVER American-Grown Medium Red

We guarantee every bag of our Medium Red and Mammoth Clover to be genuine American-grown. This Seed is hardier and far safer than the European Seed now being widely offered. Every bag of our seed carries analysis tag stating purity and germination of the contents. Freight paid on one bushel or more. Bags free.

"Good Equipment Makes a Good Farmer Better"

McCormick-Deering
P & O Horse and Tractor Plows

Walking Take the handles of a McCormick-Deering P & O walking plow and follow it once across the field, and you will realize what P & O designers have learned in their eighty years of plow building. They know how to build a walking plow that will run true and stay in the furrow without having to be held there. McCormick-Deering P & O Plows are right in quality, right in balance, and right in workmanship.

Riding P & O riding plow features are celebrated among plowmen. See the Diamond, sulky or gang, with its high-lift, double-bail, powerful foot lift, light draft, automatic rear-wheel control, and quick detachable shares. Any boy big enough to reach the foot trip, and old enough to drive, can operate this P & O. Riding plows for all soils and fitted with bottoms as near perfect as man can make them.

Tractor The famous Little Genius in two, three, and four-furrow, with 10, 12 or 14-inch bottoms, any style. The Little Wonder two-furrow, 14-inch for small tractors. Disk plows for stubborn soils. For the most satisfactory power farming, put the McCormick-Deering P & O Plow and the McCormick-Deering Tractor together. Each is made to fit the other.

See the McCormick-Deering Dealer and Insist on P & O

This is the key
NITRATE OF SODA
to profitable FARMING

DO YOU KNOW that for every pound of Phosphoric Acid taken from the soil, a Cotton crop takes three pounds of Nitrogen, Tobacco takes six pounds of Nitrogen, Apples and Timothy take five pounds of Nitrogen, Corn takes two and one-half pounds of Nitrogen, Wheat and Potatoes two pounds of Nitrogen.

Practically all commercial fertilizers contain more Phosphoric Acid than Nitrogen.

Therefore it becomes necessary to add more Nitrogen to prevent soil starvation. This is why

IT PAYS TO USE
NITRATE OF SODA
100 pounds to 300 pounds per acre

Your farm is running down in fertility unless you are putting back each year as much Nitrogen as you take out of it in your crops. This explains why the use of immediately available Nitrogen in Nitrate of Soda, to supply the deficiency shows such surprisingly large increase in the crops on which it is used.

These offices are maintained to furnish authentic information and render any possible assistance to farmers in their fertility problems.

If you want our bulletins or need information about the use of Nitrate of Soda, or if you cannot readily secure the nitrate you require, write our nearest office. For our information please add the number 2328

The One Sure way to make real profits from poultry

Any man or woman can make poultry a big, profitable crop. Poultry can easily bring in $500, $1000, $2000 in cash every year. Thousands are doing it today. You can do it too. And we want to help you.

The new Buckeye Book tells you in plain, simple language just what's wrong if you are not making big money in poultry. It tells you how to get on the right track. It tells you how to get more big, strong, sturdy chicks early in the season, how to get more winter eggs. How to sell at higher prices. How to handle a small flock so that it will bring you greater profits than others are getting from larger flocks.

$500 to $3200 a Year from Chickens

This free book will tell you how Mrs. Fred Gassaway of Rivervale, Indiana, a woman 65 years of age, makes $1500 a year net profit from white leghorns. It tells you how Mr. and Mrs. Hale Thompson of Williams, Indiana, make $3200 a year poultry profits on a 60-acre farm; how Mr. Everett Foster's flock of white leghorns added $795 last year to the net profits from his 80-acre farm near Heltonville, Indiana; how Mrs. John Schwengel of Champaign, Ill., realized a net profit of more than $1200 last year from a small flock of barred rocks. It tells you how hundreds and hundreds of people are making big profits where formerly they made small profits. And it tells you how you can do the same.

Buckeye incubators coal-burning brooders blue-flame brooders

Only Buckeye Equipment Can Give You These Results

If you want to succeed with poultry, if you want big profits instead of just pin money—then your poultry raising equipment must be right. You can't make big poultry profits without good incubators and brooders. And wherever you go you will find that the big money-makers are using Buckeye Equipment exclusively. You must have bigger hatches of strong, sturdy chicks. You must be able to raise these chicks to maturity. Buckeye Incubators and Brooders will give you results which cannot be secured by any other incubators and brooders in the world. Every year thousands and thousands of other incubators are thrown in the junk heap to make room for Buckeyes. If you want to profit by the experience of others get rid of the incubators that are losing you money and put in Buckeye equipment.

Take the Advice of Experts

Visit those farms where real money is being made from poultry and ask their advice as to the kind of equipment that you ought to have. They will tell you Buckeye. The fastest growing and most profitable hatcheries in America are equipped with Buckeye Incubators. The great agricultural colleges, who have made a careful study of incubators and know the relative merits of all of them, use and recommend Buckeye Equipment. The United States Government in the School for Disabled Veterans uses Buckeye Incubators and Brooders. Go to your county agent or your home demonstration agent. Ask them. They will invariably tell you that Buckeye Equipment is reliable and it is the kind of equipment that will help you to make the most money.

Don't try to get Buckeye results with any other kind of equipment. It simply cannot be done. The money you spend for cheap equipment is wasted money.

Write Today for Your Copy of the Buckeye Book

Poultry is the farm's surest profit maker. It is the crop that never fails. It brings in the ready cash, and it offers an opportunity for thousands of people to make money that they have not made before.

Kirby Poultry Farm

Why Early Chicks Often Make the Best Layers

THE eggs that produce winter hatched chicks are usually laid from three to four weeks before the chicks arrive. They are gathered on many cold windy zero days when only good winter layers under proper managment are laying eggs. If those eggs hatch it is further proof that the parents were birds of excellent vigor.

So it is evident that your winter hatched chicks must be good chicks. During the warm balmy days of spring even the poorest of the cull hens will develop a little ginger and lay a few eggs. But when you hatch from winter layers you automatically cull the flock by reproducing only the type of hens that are cold weather layers.

Ready for Market Early

The cockerels will also be produced from the winter laying hens and probably hand down the tendency to heavy egg production. The broilers will come on the market early when prices are the best. All of the cockerels saved for breeding stock will have a long growing season and be thoroly matured by fall.

Early hatched pullets make fall layers when eggs are scarce and high in price. If necessary to breed from the pullets, they will be sufficiently developed to produce chicks of fair quality even tho not usually as good as the chicks from hen's eggs.

Mother Nature Co-operates

I find my early hatched chicks are large enough to take advantage of the range when all conditions are right for the development of young bird life. The green feed is fresh and tender. The angle worms and insects are plentiful. Nature co-operate with the poultryman in the spri and chicks grow faster than in th summer when the grass is toug and the worms are scarce.—R. G. Kirby.

Breeding Stock Diseased

Our flock of chickens, R. I. Reds and Buff Leghorns, has been thru a siege of pox, roupy condition and bowel trouble. Some sick ones have gotten well and have been put back in the flock; others we killed. Not more than twenty-five per cent of flock (we have about 200) were infected. Will this flock be safe to breed from? I always begin to set eggs about middle of February. I have been using sulphur, iodine, sulphuric acid and oil of sassafras thru entire flock as prescribed by State College poultryman as a preventative.—H. F. C., Chester Co., Pa.

I would isolate any birds that ha been sick and all that appear lackin in vigor. The balance of the flo should be all right for breeding pu poses. The diseases you mention a not hereditary but hens lacking vigor due to disease might produ chicks of weak vitality which a more subject to disease. The vigor hens in your flock which have sisted infection and laid winter e are probably good hens and I sho consider them worthy of use in bre ing pens. Of course you are the b judge of the value of the birds a their phyiscal condition, as you constantly working with them.— R. G. K.

Stockmen Have a Busy Week

Swine, Sheep and Beef Breeders Meet at Harrisburg

By W. H. TOMHAVE Staff Contributor and Advisor

NUMEROUS livestock meetings, and a swine show and sale were held in connection with the recent Ninth Annual Farm Products Show in Harrisburg. Lack of proper housing facilities makes it impossible to feature all classes of livestock each year. This year the livestock exhibit consisted of swine of the different breeds entered in the sales held during the week.

The interest in the livestock and wool exhibits and the meetings held during the week indicates the faith of the Pennsylvania farmer in the production of good livestock in connection with his farming operations. It is estimated that from 40,000 to 50,000 people visited the numerous exhibits in connection with the show.

Tuesday and Thursday were the days scheduled for the breeders of meat producing animals and draft horses. The meetings were held in the Senate Caucus Room of the Capitol.

A Business—Not a Game

Tuesday was swine and sheep day, the morning session being devoted to swine and the afternoon to sheep. The swine session opened with an address by E. Z. Russell, federal swine specialist, Washington, D. C. He advocated the production of pork on a long time basis. Hogs should be an important class of livestock in a successful system of diversified farming.

Mr. Russell stated that high prices for pork products and for breedi stock usually attract new people the business who, in many ca have no knowledge of swine raisi also that booms are not good for permanent industry, but that purebred business must be conduc as a business and not as a game, that all sales should be condu on a cash basis. He predicted ter times for the hog men but that herds be carefully culled high production and that the n ber of hogs to be kept on each be determined by the land owner.

Tell How They Raised Ton Litt

L. C. Madison, swine exten specialist of the Pennsylvania S College, discussed recent devel ments in community swine breedi He reviewed the work done in different counties and the many vantages to be derived from munity organizations. The first co munity swine club was organi only about five years ago, yet present there are more than hundred such clubs in operation.

A number of short talks made by men who produced a litter in 180 days during the year. Practically every speaker phasized the importance of blood, good care and managem plenty of good feed and a well anced ration.

Among these speakers was Th Strong, Indiana County, who year produced the champion Ch White litter in the Unit S

The litter developed by Mr. Strong consisted of fifteen pigs that weighed 3461 pounds when 180 days old. His net profit after allowing for feed and other expenses was $103. O. W. Keim, Somerset County, the youngest person in Pennsylvania to develop a ton litter, discussed his method of feeding and developing the pigs. Mr. Keim was a pig club boy a few years ago and is now a student in high school.

Ray Briggs, of Luzerne County, discussed his method of feeding eight Duroc Jersey pigs to a weight of 2198 pounds in 180 days. Mr. Briggs is not only a ton litter man but is also the champion potato grower in Pennsylvania this year.

The morning session closed with a discussion of the Utilization of Factory By-products in Pork Production, by M. F. Grimes, of State College.

Sheep Men Believe in Co-operation

The session of the sheep breeders and wool growers opened with an address by N. C. Dale, of New Castle, on the results of six years of co-operative wool marketing in Lawrence County. He told how this work was started in a small way, but developed on a sound basis so that at present practically all the wool in the county is marketed co-operatively.

County Agent R. S. Clark, of Huntingdon County, has done considerable work in organizing ram associations in his county. He told how these clubs were organized and the marked improvement brought about in the quality of lambs produced by the use of good purebred rams on the grade flocks in the county.

Fitting sheep for show was discussed by P. C. MacKenzie, of State College. He discussed the importance of good sheep to begin with and the constant care necessary to have sheep in prime condition for show.

W. B. Connell, sheep extension specialist, State College, outlined a constructive program for the development of the sheep industry in Pennsylvania. He called attention to the importance of good breeding animals and the careful selection of foundation stock. In his opinion, ram associations, a better understanding of flock management, proper feeding of lambs, and the grading of wools are the most important factors to be carried out in successful sheep raising.

Decline in Horse Breeding

There was considerable interest in the horse program which was arranged. Dr. J. F. Shigley, of State College, discussed the horse situation. He called attention to marked decrease that has taken place in recent years in the number of colts produced. This reduction in the number of colts will mean a shortage of horses necessary to replace old horses. The eastern farmer will be the first to feel the effect of this shortage.

Ed. Nicodemus, of Waynesboro, Pa., one of the most successful breeders and exhibitors of purebred horses, spoke on the problems of the draft horse breeder.

The first ton gelding club organized in the state was started in Jefferson County last spring. The method of operating one of these clubs was discussed by J. P. Winslow, of Brookville.

J. H. Knode, of Chambersburg, discussed the subject of filly clubs. He reviewed the work started in Franklin County last year

Beef Cattle Breeders Hopeful

J. M. Vail, State College horse extension specialist, outlined a constructive horse program for Pennsylvania. He called attention to the number of horses shipped in each

It's a shame not to raise 95 out of 100 chicks—when so many poultry men are doing it

Just follow these simple feeding rules

INVESTIGATION proves this fact: Today more men and women are making money out of poultry than ever before. Just egg money producers are steadily growing fewer in number. On thousands of farms the money invested in poultry pays more returns than that invested in any other way.

The reason for this change is easy to discover. Wherever you go, poultry raisers are learning the importance of proper feeding. Upon your success in producing a new flock of healthy chicks depends your success as a poultry raiser. Ten years ago on nearly every farm, most anything was good enough for chicks. Today a balanced ration is almost the universal practice. So now 100 make poultry pay where few formerly found it profitable.

Chicks Grow Fast On Right Feed

At this season of the year the production of chicks is receiving most attention. Rapid growth and proper development must be assured. For best results in getting baby chicks beyond the danger point depend on Globe Chick Starter with dried buttermilk. This perfect ration produces astonishing results. Records from leading poultry raisers, where Globe Chick Starter is used exclusively, show an average of 95% of chicks raised on this starting feed. Globe Chick Starter brings them up in the quickest and most economical way.

Chicks Like It

Our word alone, we know, is not enough to prove our claims for Globe. Nor is the favorable verdict of almost half a million users of our feeds. A *test* is the surest way to convince you of the merits of the Globe Brand. So a test is all we ask. Just follow the simple rules and then compare results with any other feed you have ever used. The Globe Merchant near you will gladly give you more details on Globe Chick Starter with dried buttermilk. It will pay you to talk with him at the first opportunity. He is a good man to know.

A Busy Week

(Continued from page 17)

year which could be raised on the farms in the state.

The beef cattle interests held their meeting Thursday afternoon. E. W. Sheets, Chief of the Animal Husbandry Division, Washington, D. C., discussed the beef industry. He reviewed the recent changes in the beef industry and outlined many of the problems of the future. He believed that the beef men have passed the period of depression and can look for more favorable conditions, both for the breeder and the feeder.

Success of Baby Beef Clubs

W. S. Hagar, Mercer, Pa., told about the successful operation of baby beef clubs. His county has had the most successful baby beef club in the state. The calves are fed during the summer and fall by the members of the club and put on exhibition and sold during the early part of December so that they can be slaughtered for Christmas beef. This method of operating the club work has attracted buyers and the demand for their calves is increasing.

B. H. Wilson, Coatesville, Pa., spoke on the management of the beef breeding herd. Home-grown feed, consisting of silage, alfalfa and clover hay as winter feed, and good pasture during the summer, give satisfactory results, he said.

P. T. Brown, State College beef extension specialist, discussed the outlook for beef cattle in Pennsylvania. He spoke of the increased interest in purebred cattle and the number of new herds that are being established.

Gold and Silver Medals Awarded

On Wednesday evening more than 200 swine growers held a banquet at which the medals offered by the various state associations were awarded.

Pennsylvania swine breeders made remarkable records in the ton litter contest, producing a total of fifty-eight ton litters which gives the state second rank among all the states in the total number of ton litters produced.

Other outstanding accomplishments are, the production of the world's record Chester White litter and the tying of the world's seven pig litter record. Pennsylvania produced as many eight-pig ton litters as were produced in all previous years in the whole country.

The heaviest Berkshire litter of the year was sired by a purebred Berkshire boar. Every ton litter produced made a substantial profit.

The state associations of the different breeds awarded a gold medal to those producing a ton of pork with one litter in 180 days, and a silver medal to those producing 1800 pounds in the same period.

High Quality Wool Exhibited

The wool exhibit was made up of 178 fleeces which is said to be the largest wool exhibit ever held in the United States. The entries came largely from the counties in the western and central part of the state. The quality of the wool was the best ever exhibited at the State Farm Products Show. Two classes, one for ram fleeces and one for ewe fleeces, were provided for fine and medium wools. All wools were judged by W. B. Connell, of State College.

Swine Show and Sale

The swine show was made up of senior and junior bred gilts representing the five breeds, Berkshires, Poland Chinas, Duroc Jerseys, Chester Whites and Hampshires. Approximately thirty head of each breed were sold. The sales were satisfactory from the viewpoint of the consignors and buyers. No outstanding prices were realized but the good gilts of each breed brought satisfactory prices.

The Berkshires made the highest average of $67.50 on thirty head sold. The top price was $130, paid by J. H. Zouhnour, Johnstown, for the gilt Sycamore Mastodon Girl, consigned by Sycamore Farms, Douglassville, Pa. This gilt was also first in the class of senior gilts and champion of the Berkshire show. All classes were judged after the sale.

The Chester Whites averaged $68 with a top of $175, paid by M. E. Knouse, of Biglerville, for Bear Mount Queen, a junior gilt, consigned by Knouse Bros., Biglerville. This gilt was also made champion gilt of the Chester White show.

Poland China and Duroc Sales

The Poland China gilts averaged $54.50 for twenty-eight head. The highest price paid was $102.50 for a senior gilt, Clan's Beauty, consigned by C. W. Porter, of East Millsboro, and purchased by Ira C. Doub, of Hagerstown, Maryland. A junior gilt, Clansman's Wonder Lady II, consigned by T. B. Byers, Vanderbilt, was sold for $85 and made champion gilt of the show.

The average for the Duroc Jerseys was $52.50 on thirty head. A junior gilt, Homewood Belle 2nd, consigned by E. W. Kline, Orangeville, and purchased by C. M. McDowell, Mercer, for $152.50, was the top gilt in the Duroc sale. Another junior gilt, R's Pathfinder Sensation 7th, consigned by Clarence Reese, Berwick, was the champion Duroc Jersey of the show and sold for $115.

The average for the Hampshires on twenty-two head was $35. The top gilt was a senior pig, Royal Mamie, purchased by Geo. N. Bawman, of Palmyra, Pa., for $57.50. This gilt was also made the champion of the show.

A number of state livestock associations held their annual business meeting and election of officers during the week of the show. The officers elected by the several organizations are listed on page twelve of this issue.

The Hereford cattle breeders' was the only beef cattle association to hold a meeting. This association elected Geo. L. Ball, Pittsburgh, president, and F. L. Bentley, State College, secretary-treasurer.

Champion Egg Judges

THREE poultry husbandry students representing the Pennsylvania State College, in competitions with students from five other colleges, took first place in the judging for egg production in the annual poultry judging contest held January 23 at the Madison Square Garden in New York City.

Besides winning the sweepstakes cup, offered for the winners of the egg production contest, Penn State had first and third high man. H. O. Stuart, of Pittsburgh, won a gold medal for making the highest score in the contest and Leon Todd, of Honey Brook, Chester County, was awarded a bronze medal for taking third place.

Won on Rhode Island Reds

Four breeds were judged, Rhode Island Reds, Wyandottes, Legborns and Plymouth Rocks. Cups were offered for the winners of each breed contest and the team from Penn State won the cup in the Rhode Island Red contest.

In judging the four breeds according to the standard requirements, Connecticut took first place, followed in order by New York, North Carolina, West Virginia, Pennsylvania and Massachusetts.—B.

"What do elephants have that no other animals have?" asked the teacher of her first-graders.

"Little elephants," was the surprising response.—Judge.

Sugared Schumacher Feed

For Health—For Large Production For Economy – For Profits

Sugared Schumacher Feed meets the needs of the dairy cow and the dairy farmer.

Sugared Schumacher Feed is ideal as a ration for the entire dairy herd. Start your young calves on it. Grow and develop the yearlings on it. Build up the dry cows and springers with it. Make your milking herd most profitable by its liberal use.

Sugared Schumacher Feed is essentially a scientific blend of choice products of corn, oats, wheat and barley with the right amounts of molasses and mineral compounds.

It is very palatable—Cows relish it. It is highly digestible —Cows thrive on it. It is varied — Cows continue to like it. It is rich in carbohydrates—Cows need it. It is economical—Dairymen make money with it.

Blackburn College Farm, Carlinville, Illinois

The Quaker Oats Company,
Chicago, Illinois.

Dear Sirs: "Here at Blackburn College we have a milking herd of seventeen pure bred Holsteins which we feed for maximum production.

"I have always ground and mixed my own feed until I discovered Sugared Schumacher Feed because I believed it cheaper and better. Sugared Schumacher Feed has nothing in it but feed and I consider it the purest, finest feed there is on the market. I have fed it to our herd here at the college for almost a year and from the first have had very remarkable results as is proved by the accompanying illustration. The cow in the picture is a three year old. She is being fed 8 pounds of Sugared Schumacher per day with some supplementary feeds. Her milk record for March was 2,473 lbs. of milk which is phenomenal. This production I attribute principally to good care and to Sugared Schumacher Feed, which is the basis of her ration.

"As long as The Quaker Oats Company put into Sugared Schumacher Feed the quality they are now putting into it and I have cows to feed I shall never be without it."

M. H. ALEXANDER, Farm Superintendent.

Suggested Rations

With alfalfa or good clover hay, feed Sugared Schumacher Feed straight. With mixed clover and grass hay, feed Sugared Schumacher Feed combined with an equal amount of Boss Dairy Ration. With timothy or grass hay, feed one part of Sugared Schumacher Feed combined with two parts of Boss Dairy Ration. D-20

What Dairymen are Doing

The Meetings during Farm Show Week Reveal the Wide Range of Their Interests and Activities

By A. A. BORLAND

Staff Contributor and Adviser

"THE best Farm Products Show ever held in Pennsylvania" was the general comment of those who attended the state show at Harrisburg last week. This statement was true not only of the character and quality of the exhibits, and the programs arranged by the different agricultural organizations, but also of the attendance of real honest-to-goodness farmers. Many who attended for the first time were heard to say, "I expect to attend every year hereafter."

The Pennsylvania Livestock Breeders and Dairymen's Association presented an excellent program.

Dr. T. E. Munce, Director of the Bureau of Animal Industry, spoke on the eradication of bovine tuberculosis in Pennsylvania. He stated that up to the present time the Bureau of Animal Industry has tested 3136 herds containing 51,084 animals and that fifteen per cent of the cattle in Pennsylvania are now under state and federal supervision. Practically all the cattle in Mercer, Crawford and Jefferson Counties have been tested and in Jefferson County less than one-half of one per cent of reactors have been found.

Much work remains to be done. At the present time 27,258 herds containing over 225,000 cattle are signed up waiting to be tested. The pressure of many other lines of disease-control work and the inadequacy of funds prevent the Bureau from pushing the eradication program as rapidly as it desires.

Secretary Summarizes Needs

Hon. Frank P. Willits, Secretary of Agriculture, stated that an appropriation of two million dollars, in addition to such portion of the dog tax fund as is available, is needed for the next two years in order to conduct the work properly.

Dr. C. M. Christy, of Brookville, presented a paper on "The Practicing Veterinarian and Tuberculosis Prevention and Eradication Work."

"What Immediate Action Should Dairymen Take in Support of a Program of Tubercuolsis Eradication" was discussed by R. R. Welch, of Grove City. He showed the importance of tuberculosis eradication as a measure for conserving human health and placing the milk and cattle business on a sound basis.

At the close of Mr. Welch's address a committee was chosen to draft resolutions for presentation to the Governor and the Legislature, requesting an adequate appropriation for tuberculosis eradication work and to serve as a standing committee of the association to co-operate with other agencies working for the elimination of tuberculosis. The committee consists of R. R. Welch, Grove City; M. T. Phillips, Pomeroy; S. N. Root, Landisville; C. D. Sprout, Meadville, and E. B. Fitts, State College.

Bigger Profits in Lower Costs

"Economy of Production, the Basis of Successful Dairy Farming," was a timely subject presented by Prof. E. B. Fitts, of State College. He stated that so much attention had lately been given to the subject of marketing that dairymen are in danger of overlooking the fact that the greatest opportunity for increasing profits is in reducing the cost of production.

Actual production records on each cow in the herd is the first essential in determining which cows should be culled out as unprofitable. The average yearly milk production per cow in Pennsylvania, according to the last census is only 3970 pounds, while the average production of testing association cows is 7184 pounds of milk.

If the cows thruout the state could be brought up to the average of testing association cows, nearly one-half of the present number of cows in the state could be dispensed with, $1.47 would be cut off the cost of producing each hundred pounds of milk and $49,024,000 would be cut from the cost of producing the present annual volume of milk in the state.

The growing of more leguminous roughage to save the purchase of high protein concentrates, the production of better quality products to encourage consumption, the use of purebred sires to improve yields, the gradual acquisition of purebred cows which are more efficient in milk production than grades,—these were urged by the speaker as important in securing economical production.

Co-ops Need Satisfied Customers

H. G. Niesley, specialist in marketing at State College, spoke on the subject, "Factors Essential in Successful Marketing of Dairy Products by the Co-operative Plan." He asserted that "Satisfied Consumers" was the keynote in successful marketing. A co-operative enterprise must improve the product and render better service than its competitors in order to succeed.

"The Why and How of Clean Milk" was discussed by C. I. Cohee in charge of the Department of Quality Control, Philadelphia Dairy Council. He stated that high quality milk was essential in preserving a market demand for milk, in securing satisfactory price, in creating a satisfaction to the producer who sells a good article and in maintaining the public health.

Members Adopted Sanitary Rules

The farmer members of the Interstate Milk Producers Association voluntarily adopting regulations for improving the sanitary quality of milk produced by them and by providing the money to carry these regulations into effect have taken the most forward step on record for the improvement of the milk supply.

"Practical methods for Determining Quality in Milk" were presented by C. S. Detweiler, Chief of the Sanitation Department, Pittsburg District Dairy Council. The sediment test has been most efficient in pointing out to each dairyman the quality of milk he produces. Every month 6500 to 7000 sediment tests are made for as many farmers.

At the beginning of the work on sediment tests only sixty-five per cent of the milk graded in Class A. Now over ninety per cent of it comes in Class A. Quality contests have been held between country plants; meetings have been conducted in the interest of clean milk; essay contests have been held for boys and girls, with a scholarship awarded to the writer of the best essay on "Clean Milk production." Dealers have been encouraged to pay a premium of five cents per hundred pounds for Class A milk, as determined by the methylene blue test which gives a rapid estimation of the bacterial content.

Buyers Will Pay for Records

Mr. A. A. Randabaugh, Carlisle, President of the Pennsylvania Cow Testers' Association, introduced the principle speaker at the testers' conference, R. R. Welch, of Grove City. Mr. Welch talked on the relation of the cow testing associations to dairy cattle sales. Thru the records obtained in cow testing associations an added value of twenty-five per cent, and in some individual cases 300 per cent, has been secured above the price for cattle that dealers would ordinarily pay. Mr. Welch emphasized the importance of having complete data on each cow, including dates of breeding, freshening, etc.

There are now forty-one cow testing associations in Pennsylvania with over 1000 members keeping over 14,000 cows. Twenty herds averaged over 400 pounds of butterfat per cow in 1924 and 200 herds averaged over 300 pounds; 1243 cows were weeded out and 180 purebred bulls were bought by members of the associations.

New Kind of A. R. Test

The Ayrshire Breeders' Association of Pennsylvania held an enthusiastic banquet and meeting which was addressed by C. L. Burlingham, secretary of the national association. Mr. Burlingham explained the splendid opportunity for Ayrshire breeders in Pennsylvania and advocated a new kind of advanced registry test,—a herd test plan that would include every cow in the herd.

E. S. Bayard, of Pittsburg, told of his visit to Scotland last summer. He was impressed with the power of the Ayrshire cow in Scotland to keep on going year after year and felt that the lifetime of a cow should be the unit to determine her value rather than a mere single high record.

Dr. C. J. Marshall in his talk pointed out that no cow produces milk better adapted to household use than the Ayrshire.

A. S. Barnhart, State College extension specialist in club work, discussed boys' and girls' club work. He stated that it was of primary importance that calves for club work be from tuberculosis-free herds. Ayrshire breeders have, in his opinion, used excellent forethought in their

(Continued on page 22)

It Brings the Markets Closer

The motor truck has come to be an important part of the equipment of the average eastern dairy farm.

If you had one NOW!

When wintry blasts howl around the eaves—and grain prices are soaring—what's a good silo worth to you?

A big reservoir full of succulent, milk and meat producing feed—grown at low cost on your own farm.

Why not make up your mind *now* on that silo question. Decide *right*. Get the silo that *saves* the valuable juices, protects against frost, saves you time and work, and *lasts* for years. The silo that *experience* proved the most silo per dollar.

Big Handsome Catalog

A big *book* on silos. Tells you all the *facts* you want to know.

Liberal Discounts for cash and early orders.

Time payments if desired.

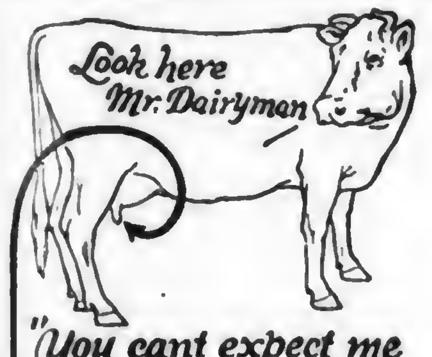
UNADILLA SILOS



"You cant expect me to show a Profit when my udder is sore"

Chapped or sore teats—or any discomfort of the udder—makes the cow nervous and causes a "holding up" of the milk. Milk that you ought to have in the pail fails to come.

It pays to keep the udder and teats comfortable—soft, silky, pliable. Bag Balm, the great healing ointment ought to be used at the first sign of chaps, cuts, bruises, inflammation or Caked Bag. A wonder-worker in any congested condition of the delicate tissues.

Keep a package on hand. Big 10-ounce can, 60c, at feed dealers, general stores or druggists. Order direct if dealer is not supplied.

Dairy Association, Co., Inc.
Lyndonville, Vt.

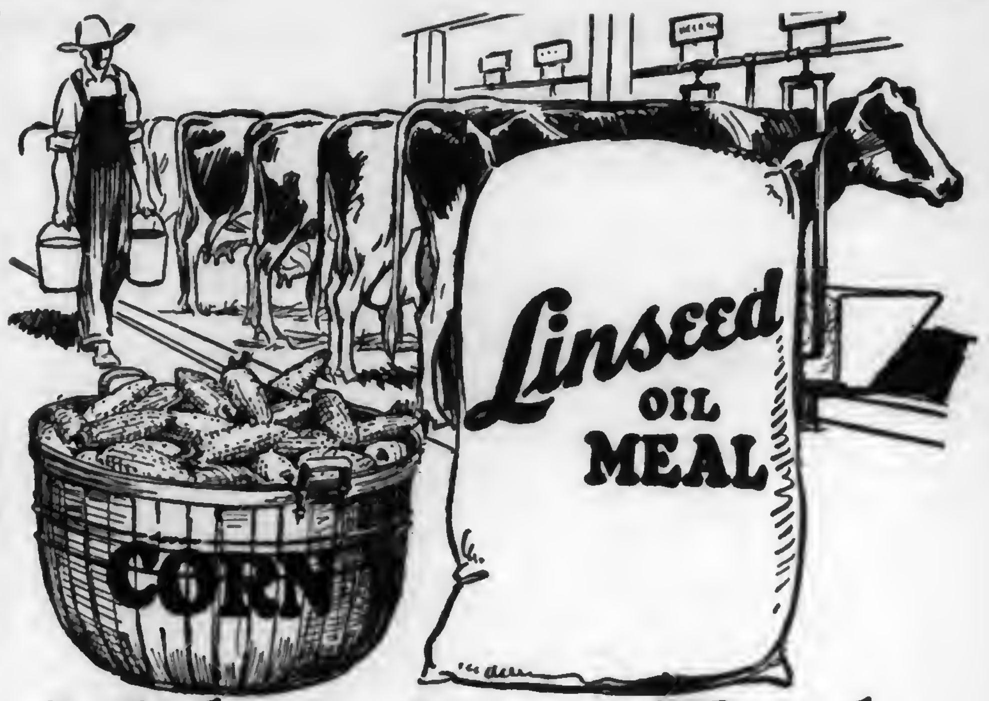
MADE BY THE KOW-KARE PEOPLE

Mention Pennsylvania Farmer when writing to advertisers.



Make a 3-to-1 Trade

With corn at its present price, you can make a neat little trade which will beat any speculation on the stock market that you ever dreamed of.

Linseed Oil Meal is, according to feeding experts who have thoroughly analyzed present feeding standards, worth three times as much as corn. On this basis you can now trade in corn worth approximately $42 a ton, for Linseed Oil Meal costing about the same but worth on a comparative feeding basis, about $120 a ton.

Thus without additional expenditure you can easily supply your full needs for this rich proteid which affords triple profit through cheaper gains, prime condition and high manurial value.

It will simply be a matter of balancing what feeds you now have with this additional proteid and conditioner. The balancing need not worry you. It has been all figured out in our book—

"How to Make Money With Linseed Oil Meal"

By PROF. F. B. MORRISON
Ass't Director Wisconsin Agricultural Experiment Station and Professor of Animal Husbandry, University of Wisconsin. Author with W. A. Henry, of the recognized American Authority on Stock Feeding—"Feeds and Feeding."

Your copy is ready for you and it will cost you nothing. You will find it chock full of feeding rations which include all manner of feeds in various proportions with direct comparisons of Linseed Oil Meal with other proteids. This book is a record of actual experiences and one which you cannot afford to be without. It is free—By all means send for it. Ask for booklet No. E-2.

Produce Milk at Lower Cost

If milk prices are low—that is the time to use the best feed you can get. Poor feeds increase the cost of milk while the best feed correctly balanced will lower the cost.

If you want to reduce the *amount* of milk, that's another matter. The way to do that is to *feed fewer cows*. But get what milk you do produce at the *lowest cost per feed dollar*.

If you want to do that, *test* Ti-o-ga Dairy Feed—the only sure way of proving to yourself that Ti-o-ga *will lower your cost of production.*

Red Brand Ti-o-ga Dairy Feed to be fed with low protein succulent roughage; Silage, Pasturage, Green Fodder, etc.

White Brand Ti-o-ga Dairy Feed to be fed with medium protein dry roughage; Timothy Hay, Mixed Hay, Corn Fodder, etc.

Blue Brand Ti-o-ga Dairy Feed to be fed with high protein dry roughage; Clover Hay, Alfalfa, Hay, etc.

If your dealer can't supply you, write us.

Dairymen's Doings

(Continued from page 21)

calf club work, the club animals being selected by a committee of breeders.

John Cochran, of Rosemont, gave an interesting review of the history of the Ayrshire breed. The antecedent of the Ayrshire breed was the Teeswater cow in Scotland, a plain red cow. In 1840 systematic efforts were started to improve the breed. Registration was started in 1879.

Ayrshire Association Officers

The officers elected by the Ayrshire Association for the coming year are: President, W. F. Glatfelter, Spring Grove; Vice President, Dr. E. S. Deubler, Narberth; Secretary, Henry Fielden, Bedford; Treasurer, John Cochran, Rosemont; Executive Committee, Henry Hall, M. T. Towner, and E. C. Deubler.

At the business meeting of the Federation of Holstein Friesian Clubs, Dr. L. H. Thompson, Montrose, President of the federation, gave an interesting report showing the progress of the Holstein breed and the federation for the past year. Resolutions were adopted unanimously recommending to the Governor and to the Legislature that two million dollars be appropriated for indemnities for cattle slaughtered for tuberculosis during the next two years, and that as much of the dog tax funds as is available be used to defray the expenses of the Bureau of Animal Industry in conducting testing work.

New Holstein Federation Officers

The officers elected for the following year are: President, Dr. L. H. Thompson, Montrose; Vice President, F. D. Kerrick, Towanda; Secretary, G. H. Truckell, Harrisburg; Treasurer, Frank Kern, West Chester. Directors, H. H. Blair, Williamsport; W. J. Fairchild, Berwick; H. E. Robertson, York; John H. Shirk, Lancaster; S. T. Witmer, Union Deposit; S. F. Zook, Currysville. These directors with the following whose terms last for another year will form the Board of Directors for 1925; J. A. Bell, A. S. Deysher, Arthur M. Northup, Ivo V. Otto, James M. Paxton, Charles A. Rowe.

The Holstein breeders' banquet in the evening was a most happy occasion. Among those present were dairymen representing other breeds. Dr. L. H. Thompson presided and in his genial way made everyone welcome.

Jeresy Breeders Organize

The Jersey breeders of Pennsylvania took a long step forward in organizing a state association. There is a large revival of interest in the Jersey breed owing to the demand for higher testing milk among consumers and the willingness of dealers to pay a better price for milk rich in butterfat.

Representatives from eleven counties were present at the meeting. After a number of enthusiastic addresses by prominent Jersey breeders, an organization was éffected and the following officers elected: President, W. F. Shrum, Jeannette; First Vice President, Harry Hayward, Philadelphia; Second Vice President, Utley Wedge, Paoli; Third Vice President, M. A. Taylor, Grover; Secretary-Treasurer, C. S. Fox, Pocopson. Directors, L. B. Carter, Titusville; H. G. Twaddell, Westtown; J. C. McCandless, Euclid. Each president of a county Jersey breeders' club will also be a director in the state association.

Three Guernsey Bodies Get Together

The Guernsey Breeders' Associations; Eastern, Central, and Western, took an active step in promoting the Guernsey interests of the state by appointing an executive committee representing the three associations to function in matters that concern the Guernsey breeders of the state as a whole. The committee is composed of George Koser, Biglerville; R. H. Power, Glenshaw; J. W. Mayes, Howard, and M. T. Grimes, Catawissa.

Karl Musser, Secretary of the American Guernsey Breeders' Association gave a splendid talk on the future of the Guernsey breed. E. B. Fitts, State College, O. C. Jones, Pennsylvania fieldman, and a number of Guernsey breeders also gave interesting talks on various phases of Guernsey development.

Plans had been made for a large dairy cattle exhibit at the Farm Products Show but, owing to the heavy snow storm, it was impossible to get many of the cattle to Harrisburg. W. F. Glatfelter had on exhibition a number of outstanding Ayrshire cows and the show bull Nancy's Mintmaster, while Sycamore Farms had a number of beautiful Ayrshire heifers. It is hoped that by another year the Dairy Cattle Exhibit will be one of the most attractive features of the show.

Vocational Boys Have Busy Time

Two hundred and nineteen boys and girls had the time of their lives at the state show. They represented thirty-eight different counties and took part in corn, potato, swine, poultry, and dairy cattle judging contests.

Rings of Holstein and Guernsey cows were judged in the dairy contest. Kenneth Bender, of Benton, won first honors among a class of fifty-four contenders. James Purdy was second, Francis Crowell, third. Frank Shipman and Glen Steward tied for fourth place, and Albert Wakerman was fifth.

Professor A. L. Beam, of State College, supervised the contest which was one of the most spirited affairs of the week.

Temple of Agriculture

A WORLD'S temple of agriculture to be erected in Chicago and to be a national and international headquarters for agricultural movements is being planned by a group headed by Frank O. Lowden, former governor of Illinois.

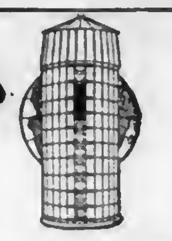
According to the plans, the structure, covering five acres, will be the largest building in the world. It will include a radio broadcasting tower rivaling Eiffel Tower in Paris, a convention hall with 20,000 seats, and a commercial hotel of 3500 rooms. It will be called the American Agricultural Society Building and efforts will be made to have the structure completed by May, 1927. The cost of the structure is estimated to be $30,000,000.—B.

Another Dairy Queen

DAIRY queens have been crowned in quite rapid succession this winter, but very few cows in the world have equalled the production of Lulu Wayne of Annfield, a purebred Holstein-Friesian, according to the advanced registry department of the Holstein-Friesian Association of America. This cow recently completed a yearly test period in the herd of her owner, Harry Yates, at Orchard Park, New York, under the supervision of Cornell University with a record of 26,302.4 pounds of milk containing 1098.92 pounds butterfat (1373.6 pounds of butter). She is Canadian bred and began her test on the Yates farm at seven years of age.

The world owes its civilization to those who have been faithful to their visions.

We cannot always oblige, but we can always speak obligingly.—Voltaire.



Built of the finest materials

GLOBE Silos are made of spruce and fir. Because of this, they last over a generation. The extension roof, an exclusive Globe feature, reduces cost per ton capacity. Also larger sizes, for engine or electric drive, correspondingly low priced.

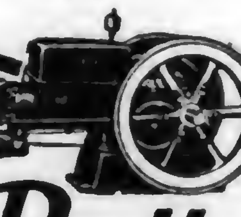
Prices quoted are cash f. o. b. factory



Better Quality Lower Price-

Why over a million farmers depend upon Fairbanks-Morse Products

YOUR money, when wisely spent, will buy for you the greatest amount of value and service.

One way to get this result with the least amount of effort is to rely upon the name Fairbanks-Morse. Over a million farmers *know* this is true. And more are learning it every day.

Fairbanks-Morse stands for over 60 years of association with the American farmer and intensive study of farm needs.

It also stands for one of the nation's greatest manufacturing institutions—with the best modern facilities for manufacturing quality equipment at lowest prices. That, in simple terms, is the reason why Fairbanks-Morse farm power equipment offers you better value for your money.

Read the descriptions and prices and make your own comparisons. See the local Fairbanks-Morse *authorized* dealer, or check and mail the coupon. We will gladly send you latest descriptive literature.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth.—It has been a long time since I wrote to you. I did not send you a picture of my pony because I did not have any, but when I get one I will send it to you. I had a fine time Christmas and hope you did, too, and the Forum friends. My pony has a partner now, it's name is Queen; my brother says she is a good horse-back rider. She carries you a-flying.

I have not missed a day from school this year or last. I love to read the letters. I got a book for Christmas and it has three or four stories in it and I have not read a one yet.

I will close my letter with the very best of luck for this year. Give my love to all Forum friends and to you. —Sara Harrison, Talbot County, Md.

Dear Cousin Ruth and Forum Friends:—I have not seen any letters from Chenango County. Wake up boys and girls of this county and write. My father has taken P. F. for four years.

I have two sisters and one brother. My brother is working out this winter. I have a dog and cat for my pets. I am fourteen years old and have about a mile to walk to school. I have to try geography regents. I think that I will pass. Our house is white with a sleeping porch on the west side. It is a two-family house. The village is three and one-half miles away. My dad lives on a farm of 120 acres.

We have cows and horses. I have written once before but did not see it published. I will close and give someone else a chance. — Meda Maine, Chenango County, N. Y.

Dear Cousin Ruth and Forum Friends:—I am ten years old and live on a very large farm. I have three sisters and three brothers. I have a pet dog and cat.

I also enjoy reading the letters. I have been making some nice candy, and I thought you would like to have my recipe.

SEA FOAM CANDY

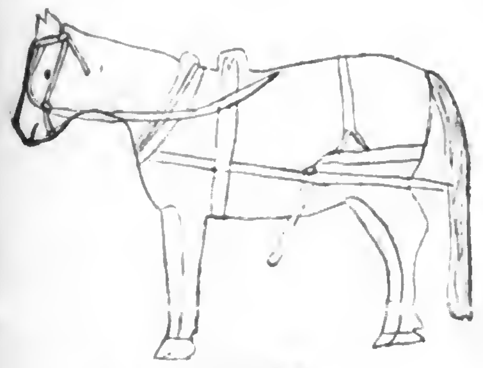
3 cups white sugar
¾ cup boiling water
¼ cup of syrup

Cook sugar, syrup and water together until a little tested in cold water forms a soft ball, and add vanilla. Then pour over the whites of two well beaten eggs and beat until it will mould in any shape. Then put on oil paper.—Dorothy Jump, Queen Anne County, Md.

A Far-off Friend

Dear Cousin Ruth and Forum Friends:—I am a Pennsylvania Farmer reader. I am now living in Florida. I live in Florida in the winter and in Pennsylvania in the summer.

It is now very sunny and warm here in Florida. There are orange trees all around our house. They are sweet and nice.



A TROTTER
Jessie Maine, Chenango County, N. Y.

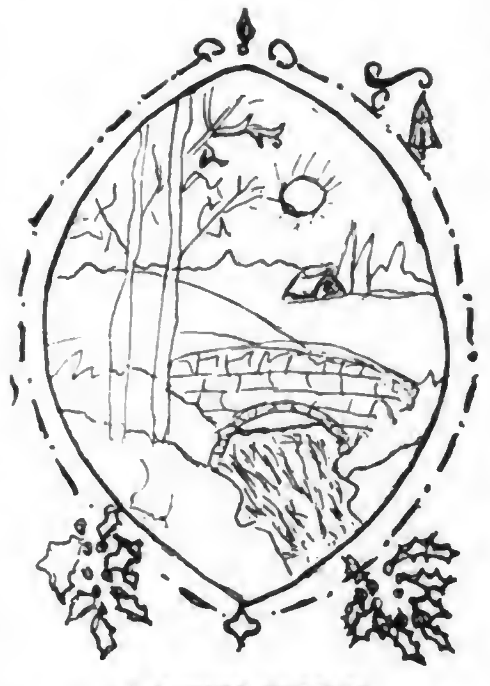
We have a tangelo tree full of fruit. They are closs between a tangerine and a grapefruit.

Many flowers bloom here in the winter, such as poinsettia, roses, hibiscus and bongainvillia. Our live oak trees are pretty with moss hanging from their branches. The mocking bird looks like a catbird and sings like a canary.

The water is very nice and warm. Orlando has twenty lakes within the city limits. We have a fine beach forty-five miles away at Cocoa. Cars can drive for miles on the sand. I am in the ninth grade and thirteen years old.— William Balderston, Orange County, Fla.

Dear Cousin Ruth and Friends:—I have been a silent member of the Forum for quite a while. I go one mile and a half to school. We like our teacher very much. There are thirty of us in the school. I go to a country school.

We have a big dog whose name is Duke, also Holstein calves eight and nine months old. I hitch up our horse, Maud, and hitch her on a big handsled and she draws me around everywhere. We have one other horse whose name is Daisy. I can ride Maud for she is very gentle.



A WINTER MORNING
Martha H. Richter, Lancaster County, Pa.

I have my own camera and take quite a lot of pictures. I have no brothers or sisters. It is lots of fun to go coasting down hill. We have examinations the twenty-second and twenty-third. I hope the Forum friends all have good luck and Cousin Ruth, too.—Thelma Ernestine Rozelle, Broome County, N. Y.

Don't you think Forum Friends might like to see some of your pictures, Thelma?

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—We have taken Pennsylvania Farmer for almost two years. I wanted to write to you but never did, so I thought I would write you now.

I live on a farm of over a hundred acres. My father is in the strawberry business. I have six brothers besides me and six sisters.

I am eleven years of age and am in the seventh grade in school. We have chickens, horses, and one cow. I have three pets; a goose, a cat and a dog. I like my goose very much and I think she likes me, too. When I work at something she is with me. I think she is a very nice pet.—Warren Hartranft, Schuylkill County, Pa.

Dear Cousin Ruth and Friends:—I like to read your letters. I am only seven and in the second grade at school. I have a pet dog named Beauty; she gives us her paw. I have a brother five years old. It is fine sledding. We live on a farm and raise lots of chickens. This is my first letter. I will write again.—Elizabeth W. Swartley, Montgomery County, Pa.

Dear Cousin Ruth and Forum Friends:—Altho I do not belong to your club I enjoy reading the page. Would you be kind enough to tell me how to join?

I have two pets, a cat and a dog. I am thirteen years old and have two sisters, Dorothy and Grace.

I go to Mt. Hope School. I live about two miles from it. I would like to join your club.—Blanche Cochran, Lancaster County, Pa.

You have joined now, Blanche,—just by writing this letter.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I guess you think that everyone around this section of the state is either sleeping or out of existence, but you're mistaken.

My father has been getting Pennsylvania Farmer for a good many years and I have been a silent reader of the Forum letters. Since I don't remember seeing any letters from Cambria County I thought I'd write and let you know we're still here.

I live on a farm a short distance from Patton. I live in a large white house with my father, mother, two sisters and two brothers. My grandmother stays with us, too. She will be eighty-nine years old on the second of February, but she is pretty spry for her age. She comes downstairs for all her meals. Besides this she knit four pairs of socks by hand in three weeks. She mends clothes and reads a good bit but she uses glasses to do this.

I've been telling you a good bit about everyone else so now I'll tell you about myself. I am thirteen years old and this is my second year in high school. I like it very well and don't think it is very hard. Last year I didn't have to take any "finals" because I kept a good average and I'm trying to do the same this year. I have about a mile and a half to walk to school and as I like to walk I'm glad of the chance.

I'll write again, if you don't care, and tell you some more.—Lucy Strittmatter, Cambria County, Pa.

Come as often as you like Lucy. We're always glad to hear from you even if not all your letters reach the other Forum friends.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—May I join your happy club? I have been reading the Forum page all winter and like it very well. I am twelve years old and am in the seventh grade at school. This is my seventh year of school and I never missed a day and never was tardy one morning. I go to the Smullin School.

I live on a farm and for pets I have two cats; their names are Tom and Niger. We have horses, cows, pigs, calves, and chickens. We are going to butcher a beef the last of this week. I have three brothers and two sisters. I have a sister four months old. Her name is Dorothy June.—Violet E. Brocious, Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—We have been taking Pennsylvania Farmer for a long time and I enjoy reading the Forum page so much that I thought I would write.

I am fourteen years old and a freshman in the Hightstown High School. I like school better this year than I ever did before. I take Latin, algebra, civics and English. I have three nice teachers.

I live on a small farm about three miles from town. I have two brothers and two sisters besides myself. For pets we have a dog named Brownie and a cat named Prosper. We also have a horse and cow.

Dorothy Hill's letter is the only one I see from Mercer County. I would like to see more.—Helen Storer, Mercer County, N. J.

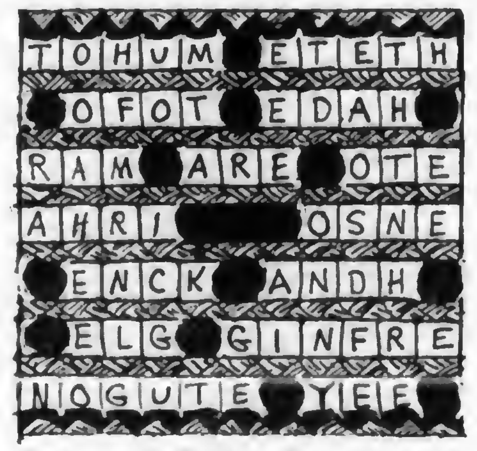
OUR LITTLE FOLKS' PUZZLE CORNER



Dear Little Folks:—You can solve this puzzle by re-arranging the queer looking words so they spell, in each case the name of some part of the body. When you have found these words, send them to me on a POSTAL CARD not later than February 14. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending a the correct answer, whose cards are best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of post cards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

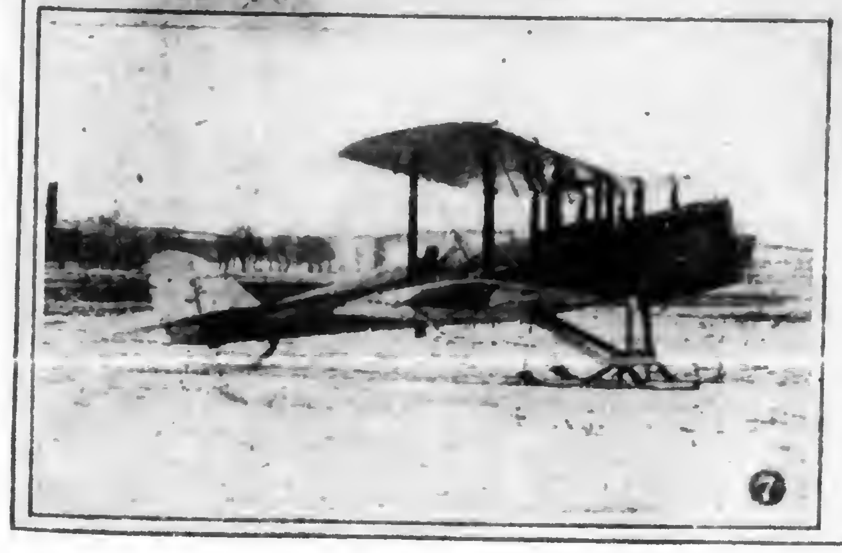
Puzzle Prize Winners

The answer to the puzzle published in the January 17 issue of Pennsylvania Farmer is: A GOOD EXAMPLE IS THE BEST SERMON: BENJAMIN FRANKLIN.

The prize winners are: J. Marvin Cameron, age 8, Thompsontown, Pa.; Rock, N. J.; Carrie M. Holtzapple, Florence Emmons, age 9, Raven age 7, York, Pa.; Helene D. A. Kelly, age 10, Newtown Square, Pa., Guy Nicholas, age 10, Loganton, Pa.; Claude Prindle, age 10, Royersford, Pa.; Anna E.Ropke, age 8, Lava, N. Y.; Dorothy Smouse, age 8, Bedford, Pa.; Carl Witmer, age 9, Dalmatia, Pa.; John Wright, age 10, Boswell, Pa.

It was good to know so many of you had been thinking of Benjamin Franklin and his good example. I wish I could answer each of your letters, but if I did you might never get any more puzzles. Each one of you may be sure that your answers are read with much interest and that I am very glad you are having a good time working out the puzzles.

PASSING EVENTS IN PICTURES



1.—Miss E. Tinnekin, of New York, and her pet alligator, attracted much attention at Palm Beach. She says he's as tame as a kitten, but we'd rather stroke puss.
2.—The President and his Cabinet. They are President Coolidge, Secretary of the Treasury Mellon, Attorney General Stone, Secretary of the Navy Wilbur, Secretary of Agriculture Gore, Secretary of Labor Davis; in foreground, Secretary of State Huges, Secretary of War Weeks, Postmaster General New, Secretary of Interior Work, Secretary of Commerce Hoover.
3.—A critical moment—friend groundhog and part of his shadow.
4.—Mrs. Mary T. Norton, of New Jersey, first woman elected to Congress as a Democrat.
5.—The old Surratt house in Washington, D. C., scene of the Booth conspiracy which led to Lincoln's assassination.
6.—Nathaniel Rothschild, aged 15, scion of the great banking family.
7.—Air mail planes don skis during snowy season in the West.
8.—All on board, including the dog! Strange and forced excursions took place during the floods in the Thames Valley, England.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

I PEERED thru the bushes. The light was unchanged. I could see clearly. The horses were gone. It was very still. The stranger lay helpless in the road and a figure was bending over him. It was a man with a handkerchief hanging over his face with holes cut opposite his eyes. He had not seen my fall and thought, as I learned later, that I had ridden away.

His gun lay beside him, its stock toward me. I observed that a piece of wood had been split off the lower side of the stock. I jumped to my feet and seized a stone to hurl at him. As I did so the robber fled with gun in hand. If the gun had been loaded I suppose that this little history would never have been written. Quickly I hurled the stone at the robber. I remember it was a smallish stone about the size of a hen's egg. I saw it graze the side of his head. I saw his hand touch the place which the stone had grazed. He reeled and nearly fell and recovered himself and ran on, but the little stone had put the mark of Cain upon him.

The stranger lay still in the road. I lifted his head and dropped it quickly with a strange sickness. The feel of it and the way it fell back upon the ground when I let go scared me, for I knew that he was dead. The dust around him was wet. I ran down the hill a few steps and stopped and whistled to my filly. I could hear her answering whinny far down the dusty road and then her hoofs as she galloped toward me. She came within a few feet of me and stood snorting. I caught and mounted her and rode to the nearest house for help. On the way I saw why she had stopped. A number of horses were feeding on the roadside near the log house where Andrew Crampton lived. Andrew had just unloaded some hay and was backing out of his barn. I hitched my filly and jumped on the rack saying:

"Drive me up the road as quick as you can. A man has been murdered."

What a fearful word it was that I had spoken! What a panic it made in the little dooryard! The man gasped and jerked the reins and shouted to his horses and began swearing. The woman uttered a little scream and the children ran crying to her side. Now for the first time I felt the dread significance of word and deed.

THE physical facts which are further related to this tragedy are of little moment to me now. The stranger was dead and we took his body to our home and my uncle set out for the constable. Over and over again that night I told the story of the shooting. We went to the scene of the tragedy with lanterns and fenced it off and put some men on guard there.

How the event itself and all that hurrying about in the dark had shocked and excited me! The whole theater of life had changed. There was a red-handed villain behind the scenes, now, and how many others, I wondered. Men were no longer as they had been. Even the God to whom I prayed was different. In the morning they found the robber's footprints in the damp dirt of the road and measured them. The whole countryside was afire with excitement and searching the woods and fields for the highwayman.

"Mr. Purvis," who had lost confidence suddenly in the whole world, had been found, soon after daylight next morning, under a haycock in the field of a farmer who was getting in his hay. Our hired man rose up and reported in fearful tones. A band of robbers—not one, or two, even, but a band of them—had chased him up the road and one of their bullets had torn the side of his trousers, in support of which assertion he showed the tear. With his able assistance we see at a glance both the quality and the state of mind prevailing among the humbler citizens of the countryside. They were, in a way, children whose cows had never recovered from the habit of jumping over the moon and who still worshiped at the secret shrine of Jack the Giant Killer.

THE stranger was buried. There was nothing upon him to indicate his name or residence. Weeks passed with no news of the man who had slain him. I had told of the gun with a piece of wood broken out of its stock, but no one knew of any such weapon in or near Lickitysplit.

One day Uncle Peabody and I drove up to Grimshaw's to make a payment of money. I remember it was gold and silver which we carried in a little sack. I asked where Amos was and Mrs. Grimshaw—a timid, tired-looking, bony little woman who was never seen outside of her own house—said that he was working out on the farm of a Mr. Beekman near Plattsburg. He had gone over on the stage late in June to hire out for the haying. I observed that my uncle looked very thoughtful as we rode back home and had little to say.

"You never had any idee who that robber was, did ye?" he asked by and by.

"No—I could not see plain—it was so dusk." I said.

"I think Purvis lied about the gang that chased him," he said. "Mebbe he thought they was after him. In my opinion he was so scairt he couldn't 'a' told a hennock from a handsaw anyway. I think it was just one man that did that job."

How well I remember the long silence and the distant voices that flashed across it now and then—the call of the mire drum in the marshes and the songs of the winter wren and the swamp robin. It was a solemn silence.

The swift words, "Your money or your life," came out of my memory and rang in it. I felt its likeness to the scolding demands of Mr. Grimshaw, who was forever saying in effect:

"Your money or your home!"

That was demanding our lives because we couldn't live without our home. Our all was in it. Mr. Grimshaw's gun was the power he had over us, and what a terrible weapon it was! I credit him with never realizing how terrible.

We came to the sand-hills and then Uncle Peabody broke the silence by saying:

"I wouldn't give five cents for as much o' this land as a bird could fly around in a day."

Then for a long time I heard only the sound of feet and wheels muffled in the sand, while my uncle sat looking thoughtfully at the siding. When I spoke to him he seemed not to hear me.

Before we reached home I knew what was in his mind, but neither dared to speak of it.

People came from Canton and all the neighboring villages to talk to me and among them were the Dunkelbergs. Unfounded tales of my bravery had gone abroad.

Sally seemed to be very glad to see me. We walked down to the brook and up into the maple grove and back thru the meadows.

The beauty of that perfect day was upon her. I remember that her dress was like the color of its fireweed blossoms and that the blue of its sky was in her eyes and the yellow of its sunlight in her hair and the red of its clover in her cheeks. I remember how the August breezes played with her hair, flinging its golden curving strands about her neck and shoulders so that it touched my face, now and then, as we walked! Somehow the rustle of her dress started a strange vibration in my spirit. I put my arm around her waist and she put her arm around mine as we ran along. A curious feeling came over me. I stopped and loosed my arm.

"It's very warm!" I said as I picked up a stalk of fire-weed.

What was there about the girl which so thrilled me with happiness?

SHE turned away, and felt the ribbon by which her hair was gathered at the back of her head.

I wanted to kiss her as I had done years before, but I was afraid.

She turned suddenly and said to me:

"A penny for your thoughts."

"You won't laugh at me?"

"No."

"I was thinking how beautiful you are and how homely I am."

"You are not homely. I like your eyes and your teeth are as white and even as they can be and you are a big, brave boy, too."

Oh, the vanity of youth! I had never been so happy as then.

"I don't believe I'm brave," I said, blushing as we walked along beside the wheat fields that were just turning yellow. "I was terriblly scared that night—honest I was!"

"But you didn't run away."

"I didn't think of it or I guess I would have."

AFTER a moment of silence I ventured:

"I guess you've never fallen in love."

"Yes, I have."

"Who with?"

"I don't think I dare tell you," she answered, slowly, looking down as she walked.

"I'll tell you who I love if you wish," I said.

"Who?"

"You." I whispered the word and was afraid she would laugh at me, but she didn't. She stopped and looked very serious and asked:

"What makes you think you love me?"

"Well, when you go away I shall think an' think about you an' feel as I do when the leaves an' the flowers are all gone an' I know it's going to be winter, an' I guess next Sunday Shep an' I will go down to the brook an' come back thru the meadow, an' I'll kind o' think it all over—what you said an' what I said an' how warm the sun shone an' how purty the wheat looked, an' I guess I'll hear that little bird singing."

We stopped and listened to the song of a bird—I do not remember what bird it was—and then she whispered:

"Will you love me always and forever?"

"Yes," I answered in the careless way of youth.

She stopped and looked into my eyes and I looked into hers.

"May I kiss you?" I asked, and afraid, with cheeks burning.

She turned away and answered: "I guess you can if you want to."

Now I seem to be in Aladdin's tower and to see her standing so red and graceful and innocent in the sunlight, and that strange fire kindled by our kisses warms my blood again.

It was still play, altho not like that of the grand ladies and the noble gentlemen in which we had once indulged, but still it was play—the sweetest and dearest kind of play which the young may enjoy, and possibly, also, the most dangerous.

She held my hand very tightly as we went on and I told her of my purpose to be a great man.

My mind was in a singular condition of simplicity those days. It was due to the fact that I had had no confidant in school and had been brought up in a home where there was neither father nor mother nor brother.

THAT night I heard a whispered conference below after I had gone upstairs. I knew that something was coming and wondered what it might be. Soon Uncle Peabody came up to our little room looking highly serious. He reminded me of one carefully holding taut reins on a horse of bad reputation. I sat, half undressed and rather fearful, looking into his face. As I think of the immaculate soul of the boy, I feel a touch of pathos in that scene. I think that he felt it, for I remember that his whisper trembled a little as he began to tell me why men are strong and women are beautiful and given to men in marriage.

"You'll be falling in love one o' these days," he said. "It's natural ye should. You remember Rovin' Kate?" he asked by and by.

"Yes," I answered.

"Some day when you're a little older I'll tell ye her story an' you'll see what happens when men an' women break the law o' God. Here's Mr. Wright's letter. Aunt Deel asked me to give it to you to keep. You're old enough now an' you'll be goin' away to school before long, I guess."

I took the letter and read again the superscription on its envelope:

To Master Barton Baynes—
(To be opened when he leaves home to go to school.)

I put it away in the pine box with leather hinges on its cover which Uncle Peabody had made for me and wondered again what it was all about, and again that night I broke camp and moved farther into the world over the silent trails of knowledge.

Uncle Peabody went away for a few days after the harvesting. He returned one afternoon in a buggy with the great Michael Hacket of the Canton Academy. Hacket was a big, brawny, kindly Irishman with a merry heart and tongue, the latter having a touch of the brogue of the green isle which he had never seen, for he had been born in Massachusetts, and had got his education in Harvard. He was then a man of forty.

"You're coming to me this fall," he said as he put his hand on my arm and gave me a little shake. "Lad! you've got a big pair of shoulders! Ye shall live in my house an' help me with the chores if ye wish to."

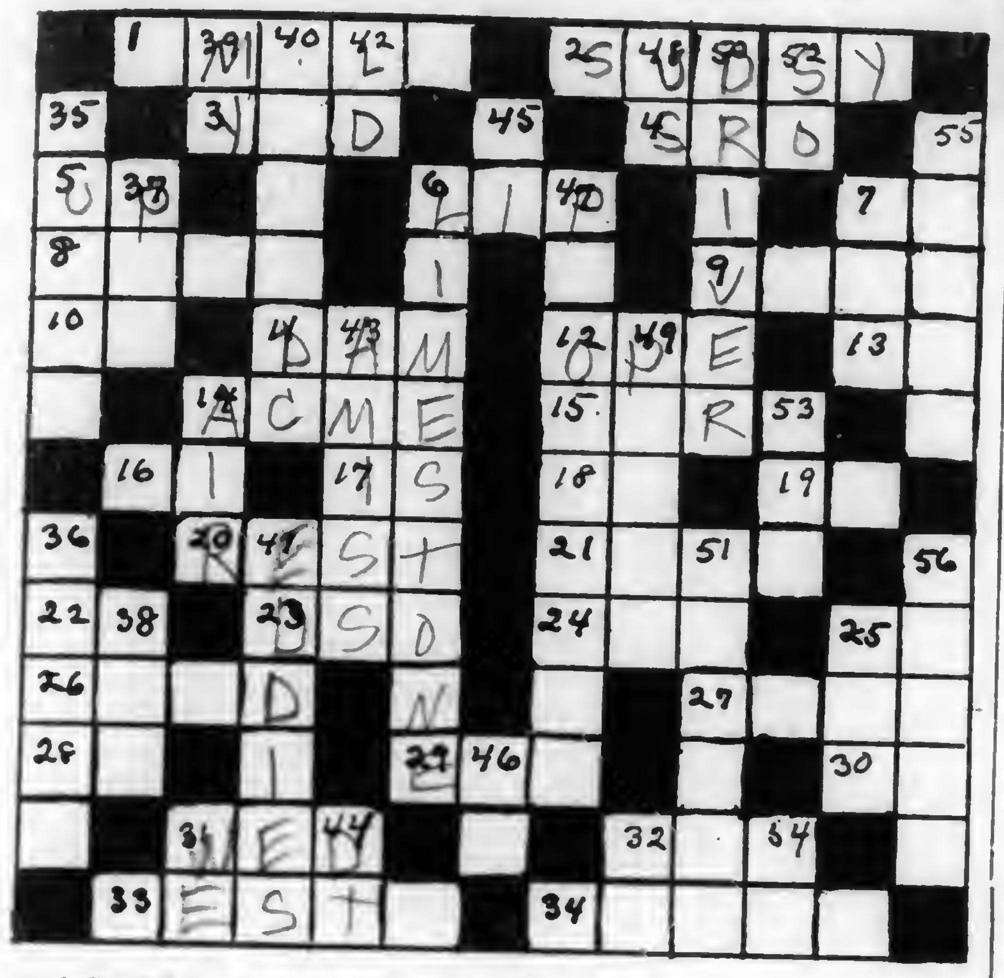
"That'll be grand," said Uncle Peabody, but, as to myself, just then, I knew not what to think of it.

(To be continued next week)

A Corner of the Products Show

These are some of the county apple exhibits at the Harrisburg Farm Show.

Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the lists given below. For example: 15 (reading across) is S O R E, and 43 (reading down) is A M I S S. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clew to help you. The solution to this puzzle will appear in an early issue.

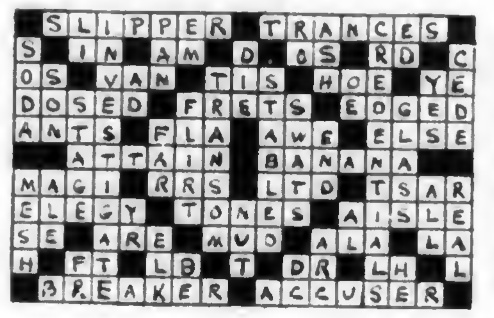
READING ACROSS

1. A game played with large wooden balls
2. Like soapy water
3. A passing fashion or hobby
4. Standing room only, abbreviation
5. From a lower to a higher position
6. One of two borders of the mouth
7. A possession of the United States in the East Pacific, abbreviation.
8. A frame for holding a pane of glass
9. To choose by franchise
10. The sign for a trill in music
11. A barrier across a water course
12. To unclose (poetic form)
13. Southern state, abbreviation
14. The utmost reach or highest point
15. Tender or painful to the touch
16. One way of writing six
17. Island, abbreviation
18. Postscript, abbreviation
19. The negative answer
20. To cease from labor
21. To take first place
22. Asiatic, abbreviation
23. Distinguished service order, abbreviation
24. Part of a circle
25. Colloquial expression for raised tracks for trains
26. To drudge or study closely
27. A precious stone with a brilliant color
28. Always
29. Without one you could not see
30. Bill of exchange, abbreviation
31. To contract marriage
32. Books or papers ,written rather than printed, abbreviation
33. Peevish
34. Like paste

READING DOWN

6. A rock having carbonate of lime as its base
7. Liquid measures, abbreviation
11. What we breathe
25. The receding tide
31. Some or all of us
32. What they call the present governor of Texas
35. Used on fruit trees to prevent spread of orchard pests
36. An island kingdom of the East
37. Nominal and market value
38. Underhand and crafty
39. Belonging to
40. Capital of a republic in North America, abbreviations
41. Small whirlpools
42. Low Dutch, abbreviation
43. Faulty, wrong
44. Abbreviation of disease resulting from excess of alcoholic liquors
45. A gathering of teachers for inspiration and constructive discussion
46. Has more than two feet but cannot walk, abbreviation
47. Used in fertilizing
48. A great uncle of ours, abbreviation
49. A puzzling question
50. One who guides a team or vehicle
51. From one side to the other
52. Therefore
53. To complete or stop
54. A public highway in the city, abbreviation
55. A portion
56. One who drives thru the air

LAST WEEK'S PUZZLE ANSWER



Never in the history of centrifugal cream separators has there been a machine equal to the De Laval. Each model has, in its day, been far ahead of all other machines in skimming efficiency, ease of operation and superior durability.

The present model De Laval is the crowning achievement of all. It has the wonderful new self-centering bowl which runs smoother and easier, eliminating vibration and thus making it skim better and cleaner, run easier and last longer.

You will get a richer, smoother, higher-testing cream with this new De Laval—and more of it, too.

De Laval Milker

If you milk ten or more cows a De Laval Milker will soon pay for itself. More than 25,000 in use, giving wonderful satisfaction. Send for complete information.

Trade Allowance

Old centrifugal cream separators of any age or make accepted as partial payment on new De Lavals. Sold on easy terms from

$6.60 to $14.30 Down the balance in 15 easy monthly payments

Why Craine Silos Are Used by the Largest Dairies

Because they are strong, durable and economical, and make the best quality of silage year after year without attention or repairs.

Craine Silos are found on the largest and finest dairy farms in the country. Walker-Gordon Laboratory Company Farms and Sheffields Farms each with over forty Craines and Crainelox Rebuilt Silos. Borden Farms and Federal, State, County and Township institutions are large users of Craine Silos.

These buyers do not make their investments in Silos on guess work. They know that Craine Silos will make better silage and cost less in the end.

For these same reasons it will pay you to own a Craine.

Built best, cost less. Get our catalog. It's a Silo book that will prove interesting and of real value to you. Write today.

Who Shall Hold the Purse Strings?

King Solomon's Idea

Number 1.

THE division of income between husband and wife should be fifty-fifty. They are partners. In business the law gives any partner his share and no more. This spirit of fairness should prevail at home.

"Forty years ago a girl in my neighborhood ran away and got married. Seven years later my mother, accompanying her to town, helped select a hat to replace the headgear the girl wore the day she beat it from home. Literally speaking, this was the first "overhead expense" the wife had incurred. Moreover she had toiled like a galley slave, and had helped buy a farm with the few hundred dollars she inherited. Happily this true story cites an extreme case.

Children's earnings? Well, nothing stiffens the morals of a youngster like the knowledge that what he earns is his. Nothing destroys a boy's initiative as thoroughly as to have his calf become Dad's cow. And since thrift, like measles, is not as catching wher he is older, why not get him a bank book now?

Speaking again of wives, let me quote from King Solomon's description of the ideal matron. He was not thinking of a jeweled princess nor the gorgeous Queen of Sheba. His pen picture was that of a farmer's wife. We know this, because no other woman would work that hard. None else is so versatile in her accomplishments.

"She riseth while it is yet dark, and giveth meat to her household, and a portion to her maidens. She considereth a field and buyeth it; with the fruit of her hands she planteth a vineyard."

And to further justify the idea of business equality, note well the last words the wise king has left us.

"Give her the fruit of her hands, and let her own works praise her in the gates."

OUR PRIZE CONTEST

The Decision Rests with You

CLOSE to 150 letters have been received in the "Who Shall Hold the Pure Strings" contest. If you had the time and we had the space, we should be glad to submit the whole 150 to your judgment.

Since this is impossible, the committee has selected a group of the best letters for your decision. They are published on this and the following pages. Vote for the one you consider best, using the ballot printed on the next page.

We have tried to select letters giving different points of view, so that youmay vote for the plan you prefer as well as for the article that strikes you as the best written one. This has been difficult, because the very large majority write in favor of the same thing,—a joint account on which husband and wife have an equal right to draw.

Space is provided on the ballot for you to suggest subjects for future discussion on the Home Page. The suggestions considered best by the judges will be awarded a prize of $5.00.

They Should Share Alike

Number 2.

CONSIDERING marriage as a partnership, the husband and wife should share all things—the responsibility, the labor and, last but not least, the gain. So I would answer the question, "Who shall hold the purse strings?" by saying, "Neither and both."

First. The farm home should be owned by husband and wife jointly as "tenants in entirety." Then, in the event of the death of either party, the farm belongs to the survivor.

Second. It is advisable for each to take some special part of the farm's labor and income as their very own, having each a separate banking account and each paying such of the expenses as are agreed on between them.

As a practical demonstration is always preferable to theory, I might state that our's is a poultry and dairy farm. My husband takes the dairy as his special province, paying interest, taxes and all farming expenses. I handle the poultry end (hatching baby chicks for sale and raising my own stock), paying the living expenses, clothes for the family, etc., and part of the wages of the hired man.

We each have our own bank-account but it is not inflexibly "mine" and "thine." We help each other out, if necessary, yet we are to a certain extent independent of each other. If I need a new Easter bonnet, I don't have to beg for the money.

Each child of the family, as soon as he or she is old enough to undertake little tasks and can understand the value of money, should have a certain weekly allowance which should be increased as they get older. It should never be very much, as it is a great mistake to let children imagine that money comes easily.

It's A Partnership Game

Number 3.

MY ANSWER is, neither alone, but both together. Isn't marriage a partnership game? I am writing from the standpoint of the farm family. The wife and mother works as hard, if not harder, in most cases, as the husband and father.

Let the woman have a checking account so that she may pay for the food, clothing and all household expenses if she so desires, leaving the husband free to attend to his own side of the business. I see no other fair way about it.

Matters should be talked over often between the partners, concerning both sides of the game so that if anything should happen to either, the other would know the conditions. Also each would know what amount could be spent, and would keep within the bounds.

Above all set aside a certain amount, if only a little, for a savings account and old age. Life insurance of some form in one or more of the best known companies is one way of having something to look forward to, as well as a protection in case of death.

In regard to children's earnings and allowances, start them in early so that they may learn the value of work, money and thrift. On a farm especially there is something for all to do down to the smallest one that can carry but one stick of wood perhaps. Almost all schools now have Thrift plans, and certain life insurance companies carry policies to cover college expenses. The parents can easily explain these plans to the children and teach them that by earning and saving, if even but a little, they are helping toward their education or other plans they have for the future. At school, through the thrift club, the child early learns how to bank, and to develop a sense of values.

"When the Lamp Is Lit"

Number 4.

DID you ever use a bag with two strings—one drawn in from each side, and requiring two hands to operate them? Those are the purse strings, one string for him and one for her. How can two wedded souls with one home, one family, and one big aim, do their best unless they stand united on money matters? Why not be mutually interested in the tomato check, the peach market, price of eggs and cost of production?

When we need a new brooder or expensive repairs for the truck, I listen as attentively as I know my husband will when I suggest a new dining room rug. Talk it over.

"At evening when the lamp is lit," in the soft glow of home happiness, talk it over. Let this be budget time if you keep one. If not, at least once a month sit close together and talk it over. Be just as free, honest and happy as in those earlier days when you nibbled "circus peanuts" from the same bag. Hold the purse strings together, and frequently, happily, talk things over.

Our child is but two years old, so I borrow a children's allowance plan I have watched for four years. Two children, now thirteen and fifteen years old, have been paid weekly for certain jobs—well done. Their pay chores include keeping wood boxes filled, carrying drinking water, and tending refrigerator pans. In summer they are paid per basket for picking fruits and vegetables for market.

They gladly do innumerable chores and errands for which they are not paid. With their earnings this lad and lass pay for clothes and recreation. At Christmas their surplus is doubled by their parents and put into their savings accounts. Besides learning the value of money they are acquiring habits of care for their clothing.

Why Not a Budget?

Number 5.

I AM glad that we have the opportunity to discuss family finances. When business concerns are taking inventories and making budgets, why should not the homemaker check up on her business? Just as business concerns fail from lack of sound financial policies, so do homes—and often hearts are broken.

Neither husband nor wife should hold the family purse strings, in my opinion. The budget system solves the problem in a fair way. In its planning there are brought into play the conservative spending qualities of woman and the broad financial vision of man. These forces create a balance not attained by either alone.

A previous expense record facilitates budget making, but is not necessary. The first step is to list the fixed charges. Then apportion your living necessities by the following percentages: Shelter, 25 per cent., food, 25 per cent., running expenses, 10 per cent., clothing, 15 per cent., higher life, 15 per cent., and savings, 10 per cent.

The division of personal items such as clothing and higher life, will be carefully considered in a family conference. Clothing inventories will be necessary in order to budget for members of the family. A survey of educational needs, social pleasures, and religious gifts, for all members, will be taken. Finally, the needs of all will be so thoroughly discussed and such an understanding reached, that at no time can one say of the other, he or she "has more than I."

If children's earnings are necessary for family maintenance, they should be used—if possible being administered by the child. By all means, children should be taught at an early age to put aside a portion of their money for saving. An allowance properly handled is splendid training for future thrift. Children should be made to give account of spending, and should be absolutely kept within the allowance agreed upon.

I think it would be fine if our Home Page printed several budgets for 1925.

Relieves Her Feelings

Number 6.

THE discussion of this subject gives me a chance to relieve myself of feelings which have long seethed within me.

In our family, which consists of five children, my husband and myself, the purse is now and ever has been controlled by my husband.

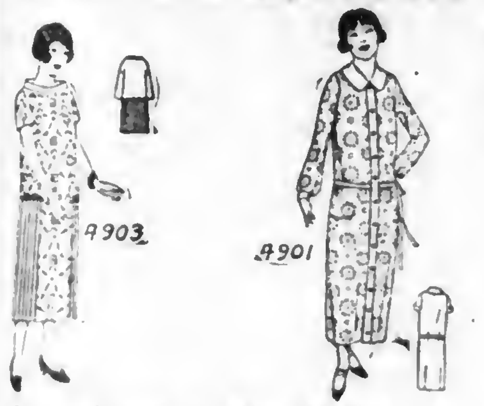
I would not create the impression that he is niggardly—far from it. He is generosity itself when he has the money on hand. Nevertheless the idea of a six-foot woman of thirty-six years, a former wage-earner, be-

(Continued on page 30)

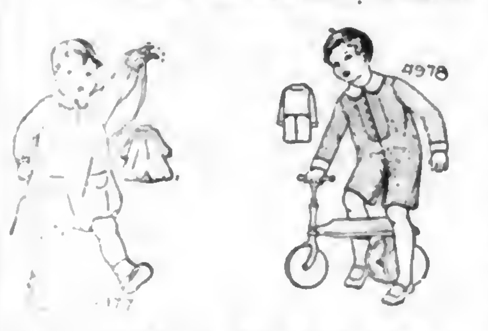
Clothes for the Young Folks

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

4903.—For the Growing Girl.—Figured silk is here combined with plain crepe in a matched shade. This style is good for kasha, or the new printed voiles and crepes. It may be finished with the short "cap" sleeve, or with the long bell portion. Four sizes: 8, 10, 12 and 14 years. A 10-year size requires five yards of one material 32 inches wide. If made as illustrated in the large view with short sleeves it will require 1⅜ yards of figured material, and 3⅝ yards of plain material. With long sleeves one-quarter yard more is required. Pattern, 10 cents.



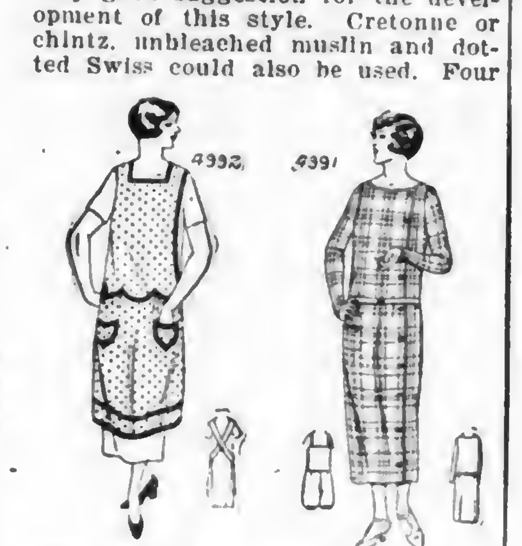
4901.—A Simple Dress.—This model is closed at the centre front under the plait fold. The sleeve may be in wrist length or short as shown in the small view. The front is finished with inserted pockets. Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 3½ yards of one material 40 inches wide. If made as illustrated in the large view it will require three yards of figured, and one-half yard of plain material. The width at the foot is 1⅞ yard. Pattern, 10 cents.



4977.—A Popular Frock.—This model is in "creeper" style, and has a very comfortable sleeve. It may be developed in poplin, pongee, cambric, flannel, gingham or chambrey. Three sizes: 6 months, 1 and 2 years. A six months size requires two yards of 27-inch material. Pattern, 10 cents.

4978.—A Play Suit.—Jersey weaves, flannel or serge as well as linen or chambrey may be used for this style. Three sizes: 2, 4 and 6 years. A four-year size requires 2½ yards of 27-inch material. If made as illustrated it will require two yards of 27-inch material and one-half yard of contrasting material for vestee, collar and cuffs. Pattern, 10 cents.

4992.—A Pretty Apron.—Dotted percale with bands of sateen is a very good suggestion for the development of this style. Cretonne or chintz, unbleached muslin and dotted Swiss could also be used. Four sizes: small, medium, large and extra large. A medium size requires 2⅜ yards of 36-inch material. Pattern, 10 cents.



4991.—A Practical Costume.—One may be modestly and comfortably attired in a dress with bloomers such as you see here. The bloomers may be of the same material as the dress, or of silk, sateen or serge in a matched color. The dress is a one-piece straight line model with convenient side closing. An ideal style for business or for housework. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measures. To make the dress of 36-inch material for a medium size will require 4⅛ yards. The bloomers and bodice will require 2½ yards. The width of the dress at the foot is 1⅝ yard. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

Who Shall Hold the Purse Strings?

A Contest within a Contest

THIRTEEN of the best letters received in the contest on the subject, Who Shall Hold the Purse Strings?, are published in the Home Section this week. Your votes will decide which ones will be given the prizes. Please use the ballot below. The letters receiving the highest number of votes will be awarded the prizes of $15.00, $10.00 and $5.00.

On the ballot, or on a separate piece of paper, send us your suggestions about subjects you would like to see discussed on the Home Page in future issues. The suggestions considered best by the judges will be awarded a prize of $5.00.

Mail your ballot and suggestions on or before Monday, February 16, to THE CONTEST EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

BALLOT

I believe that Letter Number...... should be awarded first prize. My suggestions about subjects for discussion on the Home Page are as follows:

....

....

....

....

Name ....

Town ....

Route Number .... State ....

Note.—Your vote will count whether or not you make suggestions about subjects for discussion.

Cooking heat that goes "straight to the point"

The burners of this Oil Range focus the heat right under the cooking

HEAT from any fire radiates *out*, and much of its strength is lost. But the Florence burners *focus* the heat right under the cooking utensil.

The flame rises clear and intensely hot straight to the point where it will do the most good—the bottom of the pot—instead of escaping into the kitchen. This is the way the best cooking results are obtained.

Control of the heat

To light the Florence Oil Range turn a lever and touch a match to the asbestos kindler—that's all. By turning the lever you can adjust the flame to any degree of heat required.

This flame is a gas flame, produced from kerosene vapor. It is not a wick flame, such as you see in an ordinary oil lamp. The Florence is a very economical stove and there is no smoke or unpleasant odor.

With its blue or gray porcelain enamel and sturdy black frame, any woman would consider the Florence an ornament to her kitchen.

A unique feature of the Florence Oil Range is the Leveler, an ingenious device attached to each leg to adjust the stove to uneven floors. A spirit level on the feed pipe will show you when the stove is level.

Drop into a department, furniture or hardware store, and convince yourself that this is the all-round good stove you have been looking for.

Who Shall Hold the Purse Strings?

(Continued from page 28)

ing obliged to ask hubby for every cent, is most humiliating. He cannot see it that way, and always says he wishes that all he had to do was to ask for it. All very well, but it happens that he has never had to try asking for it. When his milk check is due, he gets it, and does not have to ask for what is due him.

An arrangement I have been urging for some time, and which would greatly help me, is this: On check day when he goes to the bank to cash his check, deposit each month in my name an amount which we think might cover during the month the necessary expenditures for clothing, household expenses and such items as insurance, telephone, etc., which I could easily pay by check.

This would save my husband the bother of many small affairs which are neglected now because he is often too busy to attend to them.

There should, in my case, be some arrangement so a woman need not be obliged to stand with outstretched hand and say, "Please, may I have a nickel."

I very much approve of the idea of children having a certain number of duties to perform, and think it is of great benefit to them to have a stated amount of money per week—call it wages or allowances—which must be made to cover their small expenses. It gives them a sense of responsibility which they can gain in no other way.

"The Essence of Serfdom"

Number 7.

OF THE twain are one (and they must be if married life is to be a success), one purse with two strings is sufficient for all needs.

In other words, one bank account to which both husband and wife have free access, is necessary for justice, peace and harmony.

The toil, monotony, isolation and worry of farm life, as well as its beauties, joys and benefits, are shared equally by the farm wife and husband. Therefore no exception should be made in its monetary returns.

"With all my worldly goods I thee endow" does not mean the farm mortgage alone, and to be a real partner the wife must know the true financial standing of the firm, of which she is so important a member. To cringingly ask for what is yours is the essence of self-effacement and serfdom.

Every woman should have a business education. Keeping account of farm income and expenditures helps. Turn leisure into self-improvement. Victor Murdock says, "The hour of fate is 7 P. M., which marks the end of the day's work, usually, and the beginning of your leisure."

That is the time husband and wife should spend together, working out a financial programme of mutual benefit and interest. Take the children early into these family conferences, for "as the twig is bent, the tree's inclined." The child allowed to hoard for selfish indulgence is being ruined as surely as is the child trained to be a spendthrift. Give them early a sense of partnership and responsibility.

When the family dividend is declared, education will be apportioned to the children as their share of the "melon," while father's and mother's reward will be found in a hearthstone where an unselfish family gathers in affection and complete understanding.

A String for Each

Number 8.

HUSBAND and wife are partners. Each should hold a string. Both should know the exact condition of the business. Every pay day all necessary expenses (living, rent, taxes, insurance, feed, etc.) should be paid first. If there is any extra money left, it should go for the most urgent outlay, whether for husband or wife. Plan expenditures together, weed out selfishness, and all concerned will be happy and content.

Use some of the money usually spent at Christmas for candy, or for toys that are soon thrown aside or easily broken, and start each child with a bank account, with a definite purpose in view, as membership in a calf club, college education, or whatever interests the child most.

Make young children responsible for some regular tasks, not beyond their strength or endurance, but see that there is time for play. When extra tasks infringe on playtime, reward them with a word of praise for prompt action, and with money according to the task and your financial condition. Supervise the use of this earned money and see that 50 per cent. goes in the home bank to add to the savings account. The other may be spent to suit the child's fancy.

Older children who take the place of hired help should receive a salary and be given an interest in the business—a calf or chickens to raise. Then, when calf or chickens produce profits, or are sold, see that the child receives his just dues. Supervise a satisfactory investment with these dues.

But to the question, "Who should hold the purse strings?" my answer is, "Husband and wife should each hold a string."

Finds One Purse Enough

Number 9.

EVER since we started farming six years ago with nothing, and a mortgage on the farm besides, we have had but one purse.

I have known several families where the wife took care of the money, but in all cases I know of, it hasn't been a success from my point of view.

Others have two pocketbooks, but it seems to me it would take a bookkeeper to keep track of the things each should buy.

I believe in most instances the husband carries the cash, and too often the wife must either beg, or take some without her husband's knowledge. If my husband were one of those, I should probably demand an allowance, but he is not.

Our income is small, and there are lots of things that I would like to have, but luxuries must wait. So when my husband gets new farm machinery, I feel as though it was as much mine as his, because I am hired man in the summer and so appreciate the labor-saving devices.

We purchased a power washer, which is a great help, as I can do my washing quicker and easier, thus giving me more time for outside work.

We have four little ones, the oldest seven. I do not believe in paying them for the work they do, and we have never had much money for allowances, but I do think children ought to do or raise something that

Goodyear HEAVY DUTY Cord Tires are available from Goodyear Dealers in the following sizes:
30 x 3½ (Cl.) 34 x 4½ (S.S.)
32 x 4 (S.S.) 30 x 5 "
33 x 4 " 33 x 5 "
32 x 4½ " 34 x 5 "
35 x 5 (S.S.)
For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes.

Specially designed for HEAVY DUTY

Here's a new tire—an ideal tire for the man who drives a big heavy car or whose route takes him over rough roads.

It's the new Goodyear HEAVY DUTY Cord Tire.

Examine it, and you'll find it stronger and more massive in every way than the standard tire you are used to. Its powerful athletic body is made of SUPERTWIST, the famous new Goodyear cord fabric, and made extra heavy to withstand the shocks and jolts of hard driving.

Its thick, deep-cut, full All-Weather Tread combines maximum traction with long, slow wear.

Even its sturdy sidewalls are reinforced against rut-wear by stout concentric rubber ribs.

Naturally, this new HEAVY DUTY Goodyear costs a little more than the standard Goodyear tire.

But where extra stamina and strength are needed, it is really the cheapest tire to buy in the end.

The complete Goodyear line contains the tire you want at the price you want to pay

GOODYEAR

THE E-B LINE

The E-B Fordson Plow

Fordson Tractor owners are delighted with the E-B Fordson Plow because it makes possible the plowing of more acres per gallon. It is simple, easy to handle and durable.

The flexible hitch is so designed that plow operates in a perfect line of draft with the tractor. It is exceptionally light draft, and all of the draw-bar pull is put into furrow turning. The E-B holds to an even depth and furrows are regular. Movement of plow is not affected by uneven ground because of the flexible hitch.

The E-B Fordson Plow is equipped with rolling landslide, adjustable coulter-jointer and E-B Quick Detachable Shares, which can be put on or taken off in 5 seconds without tools.

Be sure to get FREE circulars fully describing the E-B Fordson Plow. And remember, whatever farm machine you need, you will find it in the E-B Quality Line.

Who Shall Hold the Purse Strings?

(Continued from page 31)

will give them some money to spend and save. They will appreciate it more than if it is just given to them, and it will also keep them on the farm, which is what we all want to do.

Our oldest boy and a neighbor each earned several dollars trapping this winter, and they think it wonderful. Next summer we will let him raise some chickens and a pig for his very own. The other children will have the same chance as soon as they are old enough.

Should Be No Strings

Number 10.

THERE should be no "strings" to the purse between husband and wife. The division of the income should be according to which does the family shopping. Sometimes the husband is more capable or has more time to spare from his other duties; then again the wife is the better financier or has more time to shop.

When two people join their fortunes, it is evident that their aims and ambitions are for the same goal. If it is a home they are striving for, each should be willing to forego some little luxury or pleasure, so they can make the needed payments; and if it is the pleasures of the hour they seek, they will probably have to do without a home.

The children should be brought up to work, and to do their little duties well, not slightingly. They must also have playtime, which is much more enjoyed if the work is first done. Small compensation should be given them (or allowances) with which they should purchase their school supplies, handkerchiefs, etc. The duties and allowances, increasing as the children grow older, will form thrifty habits for which they will bless their parents.

It is said that the money question is often the rock on which the marital boat flounders and sinks. But when people truly love, selfishness should be crowded out, so that money would be the means of happiness, not unhappiness. For only the undue love of money is the "root of all evil."

Wasn't Adam the Boss?

Number 11.

THE husband perchance will say, "Why, I, of course. I have the master mind, so I will hold the purse strings. In the beginning Adam was master over Eve. Why shouldn't it be the same now as then?"

Will the wife stand this? I should say not. Can you blame her? She has been under subjection long enough. It is her turn to hold the purse strings. I believe the wife has a mind equal to that of her husband.

All arguments should be settled by a compromise. Neither should hold the purse strings alone. Each should hold the strings with one hand. This should be a connecting link between them. In union there is strength.

They should not see who can spend the fastest, but should serve as a check on each other. This will help them to get what is most needed by them, and save them from paying too much for a "whistle." Exact division of the income is impracticable.

The children should be given a chance to earn a little money at home. This will add interest to their work and make them little men and little women. They should be taught to spend and save wisely. Their parents should be a good example to them. This will strengthen their characters and will better the community in which these children will live.

No husband or wife should hold the purse strings alone, since "divided, we fall."

If She Can't Trust Him—

Number 12.

THE woman who cannot trust her husband to be the financial head of the house, hold the purse strings, and settle the bills, had better remain unmarried, where, if she is intelligent, well educated and industrious, she can command a good salary and be independent.

The only exception to this rule that I can see is where a woman marries a man who is physically unable to support her, because she preferred to care for him and enjoy his love, rather than face a lonely life.

The division of the income should depend upon the local cost of living and whether the family own their home, are saving to make payments on a home, or are paying rent.

When a man is denying himself all unnecessary expenses to provide his family a permanent and comfortable home, the other members should help him in every way possible. Where there are large children, mother often forms a partnership business with them to can the surplus fruit and vegetables which are put on the market after the fresh article is out of season.

Many farmers who have no large outstanding debts find it inconvenient to give their wives a fixed allowance because of the uncertainty of crops, fluctuation of prices and scarcity of farm labor. If a man treats his wife as a business partner who shares what pleasures they can afford and who has her work lightened with modern conveniences, she may keep her arms full of children and be thankful.

One Who Can, Should

Number 13.

THE one that can hold the purse strings best should hold them. If all men and all women were alike, wise, and if all husbands and all wives were alike in their ability to get the most out of the dollar, why then the purse could, and no doubt would, be held jointly. But no two human beings are exactly alike, and in this most important of all questions, that of money, husband and wife are often as opposite as the poles.

Some wives are too easy. They fall a prey to every agent that raps on the front door. Others must buy useless trashy articles. And others still must spend all for the table or for fine clothes, and so on. In such cases the husband should stick to the purse strings.

On the other hand, a husband often is downright mean stingy, or the exact opposite. Then money always burns a hole in his pockets. In many cases he cannot strike as good a bargain as can his wife. In all such cases the wife should handle the purse strings. Moreover we think it the duty of all such delinquents, be they man or wife, to gracefully submit to the more capable one.

We regard all such practices as obsolete in which the wife gets a certain small percentage of the egg, milk or butter money for her own private use. If both parties are worthy, then they should share and share alike. Does not the money go toward the same place,—home?

Boys and girls ought to be paid for working well, and they ought to share in all the profits. This makes them better workers and more willing helpers, and increases their love for the farm.

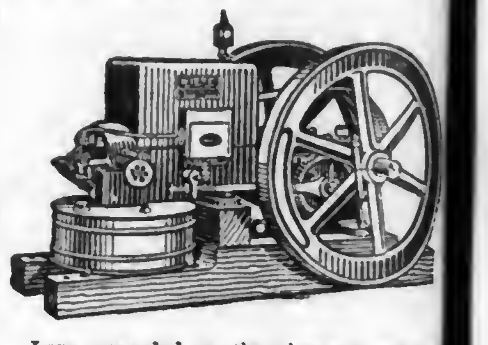
PUT A WITTE ON YOUR PLACE FOR ONLY $5.69

Now Easier Than Ever to Own Witte Throttling Governor Engine.

The Famous Standard Witte Can Be Ha Now for Only $5.69 a Month— Low Price Sets Record.

With the need for cheap, dependab power more pressing than ever before, farm ers everywhere will be glad to learn of th new low-price plan just announced by E H. Witte, world-famous engine manufactur for 42 years.

Now only $5.69 a month for a short tim buys the standard Witte Throttling Governo Engine, fully equipped with the celebrated waterproof WICO Magneto. In spite of th low price, which sets a record, the engin has nearly 40 new improvements, including a new device that makes starting easy even 40 degrees below zero.



Long regarded as the cheapest and mo dependable farm engine built, the WITT develops 50% extra power on either kero sene, gasoline, distillate or gas. Operatin on full load figures under 2c an hour. Trouble-proof and so simple that the wome folks can operate it. Easily moved from jo to job. More than 150,000 WITTES are i daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send i anywhere, direct from factory, for a guar anteed 90-day test.

Every reader of this paper who is inter ested in doing all jobs by engine powe should write today for a free copy of a re markable new, illustrated book just issue by Mr. Witte, which explains the engin fully. You are under no obligations b writing. Just send your name, a postca will do, to the Witte Engine Works, 201 Witte Bldg., Kansas City, Mo., or 2047 E pire Bldg., Pittsburgh, Pa., and receive th interesting and valuable book that gives y valuable information about the application engine power on your farm.

6½% and First Mortgage Security

INVEST YOUR MONEY WHERE IT WILL BE SAFE

Any banker or trained investment counselor will tell you that carefully selected first mortgages on improved real estate afford the best security in the world for savings or surplus funds. Arnold 6½% Guaranteed First Mortgage Certificates are held in high esteem because they have back of them first-class first mortgage security. They are further guaranteed as to principal and interest by Arnold and Company with Capital and Surplus of $1,250,000 and a long record of achievement. Organized in 1895, Arnold and Company has handled many operations but has never lost a dollar for any investor. Your money *might* earn more elsewhere and it *might* be safe. Invested in Arnold 6½% First Mortgage Certificates you get a better-than-average return and you know it is *safe*. Issued in amounts of $100, $500 and $1000 to run from 2 to 10 years.

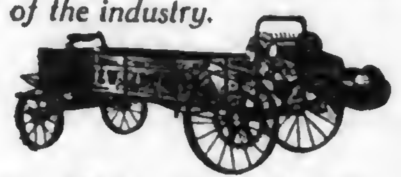
Here's the BIG Reason Why You Get More for Your Money—in THE NEW IDEA SPREADER

WHY has New Idea always given more real spreader value for the money? Read a big part of the answer in the picture of the great New Idea plant shown above. Here is one of the most modern implement factories in the world—perfectly equipped for tremendous production—*on one standardized specialty.* It is not a "full line" factory.

This giant plant is free from debt of any kind — either bonded or mortgaged — and back of it is a concern with nearly two million dollars of paid in capital.

Twenty-five years of specialized spreader experience! Ample resources. It is not surprising that the originators of the wide-spreading spreader can offer you today — in the Model 8 Spreader—*the greatest spreader value in the history of the industry.*

See the New Idea Spreader at your dealers — or mail the coupon for catalog, prices and details of our money-saving offer.



The New Idea Spreader Company, Coldwater, Ohio "Spreader Specialists for Twenty-five Years"

THE NEW IDEA TRANSPLANTER
Below is the New Idea Transplanter — an up-to-the-minute implement for the truck gardener and grower who wants his planting done RIGHT. With the New Idea the work of setting out your plants can be done in double quick time with a minimum of labor and with the assurance that every plant is set correctly and is properly watered. An exclusive feature of the New Idea is that plant setters sit up *front*, away from the dust and danger of the rear wheels and under the direct supervision of the driver. See this better transplanter at your dealer's — or mail the coupon for catalog.

Wisconsin, Missouri and average New England—½ blood, 65@66c; ⅜-blood, 68c; ¼-blood, 67@68c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, January 31, 1925.

Cloverseed, cash, old, new and January, $19.40; February, $19.40 bid; March, $19.50 bid; October, $14.25 bid. Alsike, cash, old, $13.35; new and January, $13.60 asked; March, $13.75 asked. Timothyseed, cash and January, $3.20; March, $3.25.

Market Summary

OFFERINGS of nearby fruits and vegetables were light on the Philadelphia market Friday morning. Demand and trading were about moderate. Pennsylvania celery was scarce and higher in price. Parsnips were slow but most other root vegetables were held about steady. Carlot supplies of produce were rather limited and trading was slow to moderate. Apples sold slowly at slightly higher prices.

Egg Markets Unsettled

Nearby white eggs are somewhat unsettled on the New York market. Pacific Coast whites have fallen off some in price and this has affected the demand for the nearby stock. Receivers are shading prices on account of the accumulations. The live poultry market is generally firm, with a slightly weaker undertone.

The egg market in Philadelphia is firm. Live poultry is scarce and the demand is absorbing offerings of better quality. Dresed poultry is selling well at steady prices.—W. R. W.

Canadian Wheat Crop

THE final estimate of the Canadian wheat crop is 262,000,000 bushels or 212,000,000 bushels less than the final estimate for 1923, according to a telegram received by the United States Department of Agriculture from the Dominion Bureau of statistics.

Allowing 100,000,000 bushels for domestic requirements including grain milled for flour, seed needed for next year's crop and stocks remaining on hand August 31, 1925, there should be available for export from the current crop about 162,000,000 bushels, the department says.

From a crop of 474,000,000 bushels last year exports amounted to 343,000,000 bushels. Exports from the beginning of the new crop year September 1 to December 31, 1924, have amounted to 99,000,000 bushels, compared with 176,000,000 bushels exported during the corresponding period for the preceding year.

Other Canadian Crops

Canadian flaxseed is finally estimated at 9,695,000 bushels compared with 7,140,000 bushels in 1923, an increase of 35 per cent.

Oats production is now placed at 412,000,000 bushels against 561,000,000 bushels produced in 1923; barley 87,000,000 bushels compared with 77,000,000 bushels harvested last year; rye 14,000,000 bushels against 23,000,000 the estimate for 1923, and potatoes 94,000,000 bushels compared with 92,000,000 the harvest for last year.

County News and Comment

ALLEGHENY COUNTY, PA.—Cold weather and more cold weather, —twenty-two below zero in this section in the valleys. Today a heavy snowfall comes. The most snow and the lowest temperature we have experienced for years. Farmers doing little except tending livestock. Still a few public sales being held. Generally well attended and prices, according to values, good. Fresh cows of good breeding sell high.—C. K., Jan. 29.

BERKS COUNTY, PA.—On January 2 we had our first blizzard for the season. It provides a blanket for the fields during the cold days. Many streets were impassable on account of the snow drifts. Sleighing is good ever since and those farmers who live close to the towns and have good teams, find plenty of teaming to be done. Very few machines and trucks on the streets. Milk taken on sleighs to a central point along the state highway where trucks will take it to the cities. A census of all the farms taken in the last few weeks. Since the price of wheat has reached the two-dollar mark most farmers deliver the balance on hand to the dealers. Many Grange members attended the Farm Products Shows at Reading and Harrisburg. Great interest in the different bills introduced in the Legislature and those bills which provide an increase in salary are being opposed by the taxpayers.—W. N. M., Jan. 28.

BLAIR COUNTY, PA.—We are having some real winter, the roads blocked with snow in many places. Weather very cold most of the time; on the morning of the twenty-fourth it was six degrees below zero. Farm work is practically at a standstill at present, some farmers working on the roads to help free them from snow. Stock in as good condition as usual for this time of year. Most of the people in this section were given a fine chance to observe the eclipse of the sun on the twenty-fourth. About fifty farmers from this county attended the State Farm Products Show at Harrisburg and Mr. J. M. Delozier, a prominent farmer of Frankstown Township, was awarded a silver medal for a litter of pigs weighing between 1800 and 2000 pounds at six months from birth. Wheat selling rapidly at $2; butter 50c; eggs, 50c; good beef hides, 50c lb.—H. E. H., Jan 29.

DAUPHIN COUNTY, PA.—Severe winter weather with temperature around zero. Very much snow fell during the month. Fields covered, giving a good protection. At the State Farm Products Show, held in Harrisburg during the past week, first prize for the largest and best county display of eggs was awarded our county. Prices for products: wheat, $2; corn, $1.40; oats, 65c; hay, $18; butter, 60c; eggs, 65c.—I. F. M., Jan. 26.

GLOUCESTER COUNTY, N. J.—The season for setting incubators for early chickens is at hand with but very few being started. There seems to be a great scarcity of suitable eggs. Production has been very poor with most of our poultrymen. Price holding up good, with ordinary stock selling at the dealers for 70c per dozen. Sweet potato prices not reaching the heights scaled last year. While the market is active, the presence of southern potatoes is affecting the number of orders received. Truck farmers buying large quantities of wool waste to take the place of manure. While the price is higher, yet the plant food content and the quantity used per acre makes it more valuable for most crops. Wonderful results have been secured by using it on white potatoes, onions and tomatoes. The sales are probably 200 per cent above last year, while manure sales are way below the average.—A. K., Jan. 10.

UNION COUNTY, PA.—Many farmers attended the Farm Products Show in Harrisburg and this county took four prizes for white cap yellow dent corn. From reports made at the district milk league meeting it looks as tho members should receive a little better prices for milk later on. Several farmers bought brood sows at the sale of consigned stock of gilts last week in Harrisburg. Durocs seem not quite so much in favor as they were a few years ago. Several car loads of western horses shipped into the county to be sold at private sale, before the public sales on farms begin in February. An auto company conducted a school to teach the construction and mechanism of engines lately. When wheat reached $2 many farmers sold their crop but a few are holding theirs for $2.25. Some ear corn sold at $1.10 for 75 lbs. Car loads of cinders furnished by the railroads to repair lanes and drives about buildings hauled by farmers who wish to improve conditions. An interesting road supervisors' convention was held in Lewisburg on the twenty-fourth of January. A potato growers' association was organized in the county a short time ago to buy seed potatoes and to help sell or market potatoes.—J. N. G., Jan. 27.

YORK COUNTY, PA.—An old-time winter since 1925 egan. On January second a big snow storm, when in ten hours over a foot of snow fell, but fortunately there was no wind and the snow lay where it fell, making the finest sleighing York County has had for several years. On the twentieth and again on the twenty-seventh we had big snowstorms which blocked many roads. Scarcity of help in the fall delayed the farmers to the extent that many were unprepared for snow. In the corn fields a few shocks of corn unhusked may still be seen and fodder is still out. Many farmers with hardly any wood sawed for the stove. We had a grand view of the eclipse of the sun on January 24, as there was almost a cloudless sky. It surely was a great experience to have twilight in the midst of a cloudless day. Wheat, $2; oats, 60c; corn, $1.40; bran, $2.20; eggs, 50c; milk, $2.40; butter, 40@50c; chickens, 25c; hogs, $11 cwt., live weight.—W. K., January 28.

The Week's Markets

WHOLESALE markets were very unsettled during the third week of January, partly as a result of severe weather in the East. Prices of most eastern products advanced when reports of lighter shipments were circulated. In the Middle West and South conditions did not change so considerably, but various staple lines showed a weaker tone. Combined shipments of eighteen fruits and vegetables decreased to slightly less than 13,000 cars. The gains for potatoes, cauliflower, southern cabbage and celery were more than offset by lighter movement of citrus fruits, apples, onions, northern celery and cabbage.

Maine Potato Prices Jump

Extremely cold weather and blizzards in northeastern United States seriously affected potato markets. Prices of bulk Green Mountains at Aroostook County shipping points reached highest mark of the season at 80@90c per 100 pounds, an advance of 15c during the week. Drifted roads and temperatures ranging down to forty degrees below zero temporarily stopped haulings. Railroad traffic was so impeded that only twenty carloads of potatoes came from Maine on Friday, but conditions improved later and 285 cars rolled Saturday, making the week's total for that state 956 cars.

Demand was good and the f. o. b. market firm at $1.10 for sacked western New York round whites. Considerable snowfall was reported in that section, also, with shipments dropping to 385 cars. Stormy weather interfered with sales in a number of eastern cities.

Minnesota nearly doubled its previous week's output by forwarding 1000 cars. North Dakota, Nebraska and Colorado also made gains.

Buy Lumber and Mill Work
At Wholesale Prices

FOR NEW BUILDING
REPAIRS
REBUILDING
FENCES—SHEDS

Here's why we can sell you lumber and millwork at wholesale prices.
1st. We buy raw materials in vast quantities.
2nd. Our location on water and railroads gives unexcelled receiving and shipping facilities.
3rd. We sell lumber of every description, also doors, windows, bookcases, colonnades, kitchen cabinets, stairways, etc., built in lots of hundreds and thousands by special machinery.

Make your Horses eager for PLOW TIME

ROUGHING through the winter means a soft, unready team for spring. When plow time comes, you cannot afford to harness up a rough-in-the-hair, run-down, worm-infested team.

You cannot afford to wait at every furrow end on trembly, panting horses. Remember, the season doesn't wait on you; and it's the early oats that's oats, the early corn that's corn.

Condition your workers right now with a course of

Dr. Hess Stock Tonic

It will give their systems a spring house-cleaning—loosens up the bowels, tones up the liver and kidneys, enriches the blood, drives out the worms. Will help them shed their winter's coat. Then you have a team that can go down one side of the field and up the other without a stop.

Then you get your crops out on time—in the ground, growing. That's what counts at harvest.

Get your pail of Dr. Hess Stock Tonic to-day. Also give it to the mare in foal.

Buy it by the pail

25-lb. pail, $2.25; 100-lb. drum, $8.00
(Except in the far West, South and Canada)

Honest Goods—Honest Price. Why Pay More?

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

Money Saving Ideas
for Cow, Hog and Hen Farmers
Send Today for Your Copy

Of course you want bigger earnings from your dairy cows, hogs and poultry. The question is "how to get them?" This new Jamesway Book may have exactly the answer you need.

It is full of practical ideas, plans and suggestions that other farmers are using—today. It is written from experience, and contains only the kind of information that practical dairymen and farmers want. How to improve an old barn—How to get the right floor plan—How to save labor—How to handle the feeding and cleaning jobs, etc.

Send for this book. It is free. It tells you "how" you can install any Jamesway Equipment, steel stanchions, stalls, water cups, carriers, etc.—right now—on our "PAY-FROM-INCREASED-EARNINGS" Plan. Right in your county there is a Jamesway Man, who is able, capable and eager to help you. Our book will tell you how. Write today. Mail the coupon this instant to Dept. T

It Tells You

- How to get a good dairy barn.
- How to remodel an old barn.
- How to get good ventilation.
- The Essentials of a Good Cow Stall.
- How to give cows pasture comfort in the barn.
- How to judge a stanchion.
- How to feed cows for profit.

CENTAUR SMALL FARM TRACTOR
The Best Investment You Can Make for Profit and Comfort

Why not make your plowing, harrowing, planting and cultivating easier and more profitable this year? You can do it with the simple, powerful, low cost CENTAUR, which costs only ten cents an hour to operate—and is a riding tractor for every field job.

Plows 7" Deep—Has a Reverse

With a CENTAUR TRACTOR you can do your farm work at far less cost than with a horse and you can do it quicker, better and more comfortably. It will do your plowing, harrowing, discing, seeding, cultivating, mowing, hauling, sawing, feed grinding and other jobs—in double quick time and at lowest possible cost!

Low Price—Fully Guaranteed

The CENTAUR has a powerful New-Way Air Cooled Motor. Is equipped with Bosch Ignition, Hyatt Bearings and Automatic Governor. Six years of successful service on hundreds of farms are back of this tractor. Write today for full information.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

INDIGESTION — CONSTIPATION.—I have a cow that gets constipated and when her bowels fail to move often enough, her appetite seems to leave her and she acts stupid. Some time ago she stiffened, but after her physic acted she was much better. Now she has another attack and I would like to know what to give her. She is with calf, due to freshen April 4.—G. L. F., Everett, Pa. Feeding food which has a laxative tendency, salting her feed to create more thirst, allowing her to drink plenty of water and giving her some walking exercise will cause her bowels to move. Give her one-quarter pound of epsom salts twice a day until her bowels act freely, then feed roots, wheat bran, also some linseed meal.

WEAK BACK.—I would like to know the cause of my pigs showing weakness in their back. They are fed separator milk, corn, etc. This is about the first trouble I have had in twenty years; have lost four out of a bunch of twelve. After they sicken their appetite for food is gone.—J. N., Billingsley, Md. Two important things should be done; first, give each sick pig a full dose of either castor oil, or of epsom salts to clear out the stomach and bowels; then change their food supply. Feed plenty roots, also place crushed limestone and common salt within their reach, but keep it in a dry place; also give each sick or ailing pig a dessert spoonful of cod liver oil at dose two or three times daily.

CAT HAS FITS.—Our cat, when licking his back, suddenly develops some strange antics, acting as if in a fit: throws himself upon his back and it seems as if he dislocates or disjoints something about his body; he does not froth at the mouth, but discharges urine during one of these spells or convulsions. The attack lasts only a few seconds, then the cat seems to become perfectly normal, acts as if nothing has happened. We are fond of him as we have raised him from a kitten and he is now about four years old.—E. E. K., Englishtown, N. J. Over feeding, lack of exercise, and insufficient elimination has perhaps brought on his convulsive fits. Give him a dessert spoonful of castor oil, or else give one-quarter grain of calomel, five grains bicarbonate of soda daily until his bowels move fairly free. Change his feed.

MANGE.—I have a collie pup about eight months old that has skin disease. I am told he has mange, his hair is shedding, he scratches and bites himself. I have applied sulphur, turpentine, and lard, but it has failed to help him.—A. B. B., LeContes Mills, Pa. If you keep him in a warm place, he should be clipped, then you might be able to cure him. Apply one part liquor cresolis compositus (U. S. P.) mixed in thirty parts water to sore parts three times a week. In bad cases I have used a 1-20 solution with good results. Don't feed the pup much meat until he recovers.

Old crank case oil from the flivver or tractor applied to the hogs, either from a rubbing post covered with oil-soaked burlap, or sprayed on, helps to keep down lice and mange mites.

SWINE

LARGE TYPE REGISTERED BERKSHIRES, 8, 10, 11 weeks old and 9 mo. gilts. Shipped on approval, no cash in advance. Farmers' prices. Airedale slut 3 years old, good breeder, 7 Champions on Pedigree. **Patterson Grove—WIANT FARMS—Walnut Grove Huntington Mills, Pa.**

for ROOFS

Will Your Roof *Stand This Abuse?*

Before you spend a cent you can know definitely, whether the roofing you select will endure blistering sun, beating sleet, driving rain and snow. Write for a free sample of Beaver Vulcanite Roofing. Twist it; bend it. Kick it; scuff it. Lay it on ice, then pour hot water on it. Leave it on a hot stove. Soak it in water. Put burning embers on it. *Know* that the roofing you buy will stand these abuses, out in the weather—on *your* buildings. Mail the coupon now for samples and complete particulars.

Beaver Vulcanite Roll Roofing

Supplied with plain or slate surface in various colors and tile patterns—all possessing Vulcanite's famous quality—Beaver Vulcanite Roll Roofing meets every requirement. Ask your dealer for particulars.

Other BEAVER *Products*

Reduce Your Labor — Increase Your Profits

IRON AGE Drills and Wheel Hoes include special and combined tools to suit every grower's need. Iron Age Seed Drills sow so accurately that thinning is unnecessary, if you have confidence in your seed. The operator can always watch the dropping seeds—no chance for skips.

Our No. 306 Combined Hill and Drill Seeder, Single and Double Wheel Hoe is known to thousands of Iron Age users as "The Complete Gardener." It sows all kinds of garden seeds; can be quickly changed from Seeder to Wheel Hoe, single or double wheel style. Cultivates, ridges and furrows. Takes all drudgery out of gardening; multiplies the pleasure and profit.

No. 306 Combined Seeder and Wheel Hoe

Write for folder describing Hill and Drill Seeders. Single and Double Wheel Hoes.

CASH IN On a 25-Year Experience

Experience proves that the best is eventually the cheapest. Every part of a Hardie Potato Sprayer is the best that can be made. Take our engines, for instance: we have been criticized for using such expensive, high grade motors. But they give power with light weight, and that's what you want. And our pumps—the heart of the sprayer—have been so designed and improved year by year that they eliminate 90% ordinary wear. You'll find your exact needs in the line of

DEPENDABLE HARDIE SPRAYERS

Magic Combination Row meets the demand for a very high grade sprayer of large capacity. Has standard 2½ inch Hardie Triplex Pump and unit type 4 H P. Cushman engine with magneto and radiator. Four rows, with 3 nozzles each can easily be sprayed. Makes an ideal 2-gun orchard outfit.

Superior Combination Row is for growers who desire a high class sprayer, but do not need as high power as the Magic gives. Handles four rows with smaller type nozzles than are used on the Magic. Two-inch Triplex Pump and 2½ inch Arco engine. Makes efficient one-gun orchard outfit.

Perfection Traction Row has a combination ratchet, clutch and chain drive—simple and efficient. 2½ inch Triplex Pump remodeled for traction drive. Four row.

Riverside Tires OVERSIZE CORD & Tubes

You cannot buy a better tire than a Riverside Cord. So why pay more?

That is what thousands of customers tell us. For quality, length of service, for protection against skidding, for size and strong construction, Riverside Cords equal tires even at one-third higher cost. Then why pay an extra price?

Here are the facts

The quality—service giving quality—of Riverside Cords, and the big saving in price, have made Ward's the *largest retailers of tires in the world!* We sell from 5,000 to 6,000 tires a day to men just like yourself. Many of them to men who have used Riverside Cords for years.

Built-in Quality

"Quality First." Look at the tire. The big heavy blocks of live rubber in the center, the extra thick side studs and the husky ribs give long mileage. They grab the wet roads and help prevent skidding. Riversides have a national reputation for quality. To this we have added a reputation as the "Safety Tire."

53-Year Old Guarantee

In buying a Riverside Cord tire or tube you are dealing with a company that for 53 years has backed every sale with an absolute guarantee. You take no risk. And besides, you have the experience of hundreds of thousands of users of Riverside Tires.

You pay for service in a tire. When a Riverside Cord is guaranteed to give you full 10,000 miles service, why pay more? You cannot get greater value by paying more.

"I have 4 Riverside Tires on my car. They have given me better service than any other tire I have ever used, and I have used 7 different kinds." Rev. Willis R. Booth, Henryville, Ind.

"Two Riverside Tires and heavy duty tubes have worn out two sets of more expensive tires used on the other side of the same car. I recommend everyone to use Riversides." W. R. Hays, Nashville, Tenn.

"I have had Riverside Tires on my car for 4 months and never had any air put in or any tire trouble and they show no wear." Fred Basenberg, Cullman, Ala.

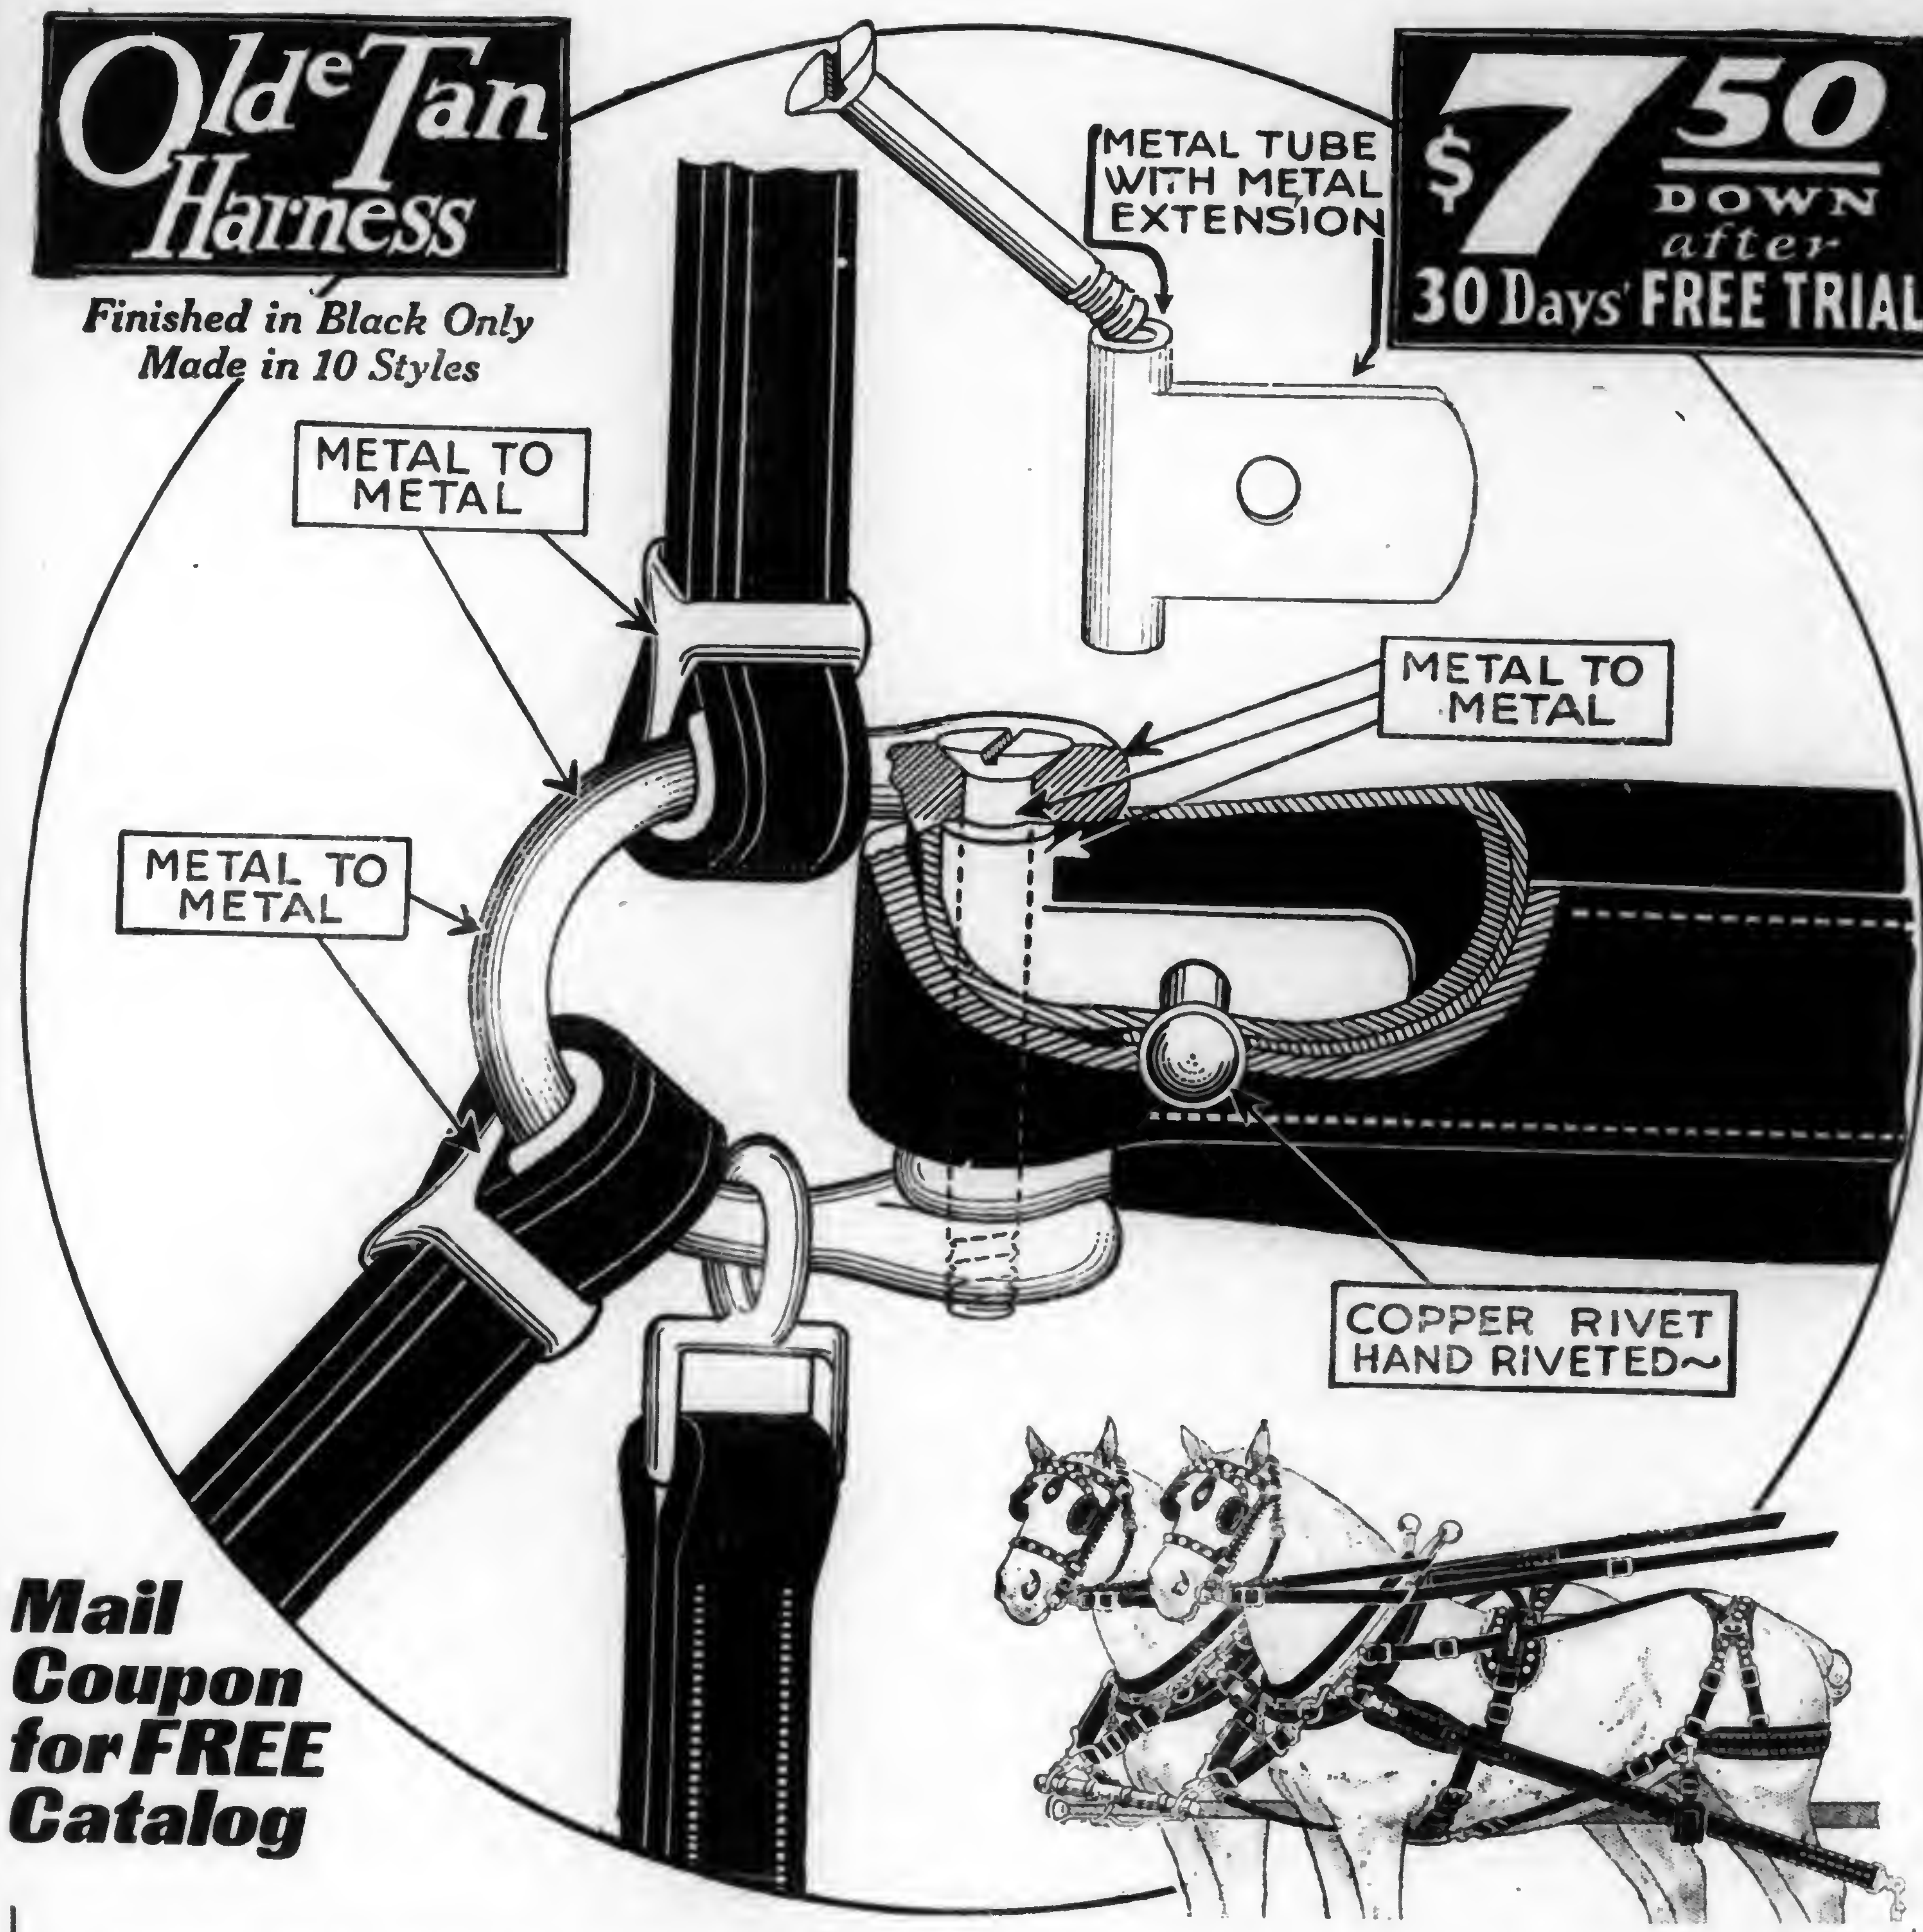
Olde Tan Harness

Finished in Black Only
Made in 10 Styles

$7.50 DOWN after 30 Days' FREE TRIAL



Mail Coupon for FREE Catalog

The Original Olde Tan Metal-to-Metal Harness

We show you here a big picture of the way metal-to-metal makes a harness wear longer. See for yourself how metal wears against metal instead of against leather. The part shown here is the breeching dee. Notice how, before there can be any wear on the leather, a thick piece of metal must wear through first.

This construction is carried out in every part of the Olde Tan Metal-to-Metal Harness where there is strain, wear or pull. Introduced only three years ago by Olde Tan, it is not yet known how many extra years of wear this construction will give a harness. It is estimated that it will make a harness last many more years. Olde Tan harness even without the metal-to-metal feature was capable of lasting 12 to 15 years. Harness with that many years behind it is still in use. The maker of Olde Tan made harness for the Armies during the Civil War and parts of the harness were found on the battle fields in fairly good condition as late as 1885, or 20 years after the war.

At the tannery is a strap which was buried 10 years in a barnyard and which is still pliable and strong. In a leather strength test held in Chicago in 1923, Olde Tan straps and traces won over every other entrant, being more than twice as strong as one of the contestants and 30 per cent stronger than the second strongest. Hundreds of letters of real enthusiasm have been received from Olde Tan owners who declare that never have they seen such a harness—never such heavy strong leather, and never such careful and precise sewing and construction.

Ward's Spring and Summer Catalogue—Is Yours FREE

JUST imagine one vast floor, containing over 100 acres, and filled with sixty million dollars' worth of fresh, new merchandise!

That is exactly what is back of Ward's catalogue. That is what Ward's big stores contain.

And this Catalogue brings into your home the wonderful opportunity to choose whatever you wish, whatever you like best, from one of the greatest assortments of bright new merchandise ever gotten together.

Is a Saving of $50 Interesting to You?

There is a saving of $50 this season for you—if you write for this book and buy everything you need at Montgomery Ward & Co.

All over America we have searched for bargains. In Europe our buyers have found bargains for you. We have gone to every market where "quality" goods could be bought for cash at lower-than-market prices.

"Ward Quality" is a Guarantee of Satisfaction

We never sell unsatisfactory goods that are merely "cheap." We offer no "price baits." We never sacrifice quality to make a low price.

You will find it a pleasure to deal with a house like Ward's—where your satisfaction is the first consideration—where every piece of merchandise is tested to make sure it will give you service.

The first mail order guarantee published in 1876

Ward's originated the mail order business in 1872. In our Catalogue of 1876 we published the first mail order guarantee: "Your money back if you are not satisfied." And this spirit of the Golden Rule, of dealing as we would be dealt by, of selling only the satisfactory kinds of goods that we ourselves would want to buy—this spirit of satisfaction and service to our customers has been the corner stone of Ward's for fifty-three years.

Everything for the Home, the Family and the Farm

The Woman—young or old—will find this Catalogue a pleasure. From the latest New York Fashions for the college girl, to the most beautiful new dresses and hats and coats for the mother—all selected in New York by our own Fashion experts.

Every Man will find all his needs supplied at a big Saving. Everything a man or boy wears or uses around the home and the farm, at money saving prices.

The Home has been our especial study. We try to offer the new things, household inventions, new designs in rugs or curtains, the best in furniture—everything that goes to make the delightful home. And our low prices often make possible the purchase of many more things than otherwise could be bought.

Your Orders are shipped within 24 hours

Your order will be shipped with 24 hours. That saves time. But r member, too, that one of our houses is near to you. It takes time for your letter to reach less-time for the goods to get you. It is quicker to order fr Ward's.

To fill in this coupon now is secure for you and your family largest possible savings, a new ple sure, and a new experience in sat factory service.

We Take a Look into the Future

The Electric Farm Shows Visitors What Rural Electrification Really Means

By C. L. WHITE, Associate Editor

DID you ever whack your head on a rafter on a dark evening in winter when you were up in the mow trying to get down hay for the night feeding without the aid of a lantern? If you have, you know what we thought about the other day when we snapped a switch on the barn floor at the Electric Farm near Harrisburg and saw electric lights beam out in the peak of the barn.

Probably everyone who has ever worked on a farm has recollections of a choice assortment of bumps and bruises gotten in the dark, when the lantern was left behind on account of the fire risk or because both hands were full and it couldn't be carried.

We have our full share of such recollections, and that is why the electric lights, including the flood lights in the yard controlled from the house, made such an impression on us.

As you know, there was a great exhibition of farm and home electrical devices on the Electric Farm which was arranged as a part of the Ninth Annual Farm Products Show at Harrisburg. The electrical show was on the J. Q. A. Rutherford homestead, a short distance east of Harrisburg on the William Penn Highway.

About the Farm Machinery

Mrs. Harrington told in last week's issue about the many electrical labor savers which were on duty in the house. We want to tell now about some of the electrical machinery that was at work in the farmyard and in the barn, the dairy house and the poultry house.

In passing, we noticed that a great many of the men visitors spent more time in the house inspecting the electric range, the electric piano and the radio (Oh, yes, and the electric razor) than they did out-of-doors where the things that were supposed to claim their special attention were on display. That was probably because it was cold outside.

About that razor, no one seems to be satisfied without hearing all about it, so— It looks like a double edged safety razor with a big fat handle and cord attached; the blade slides back and forth, so fast you can't see it move, and saws 'em off. That is all we know about it.

To get back to the barn where we started this story, imagine doing chores in winter without a lantern on the place. If you want to, you can light up the path to the barn by snapping a switch on the porch, and when you get there you can turn the same light off again by pressing another button. A switch beside the door enables you to light up the stable as you enter.

Milking by electricity is not a novelty to Pennsylvania and New Jersey farmers, great numbers of whom use electric motors to operate their pipe line milkers.

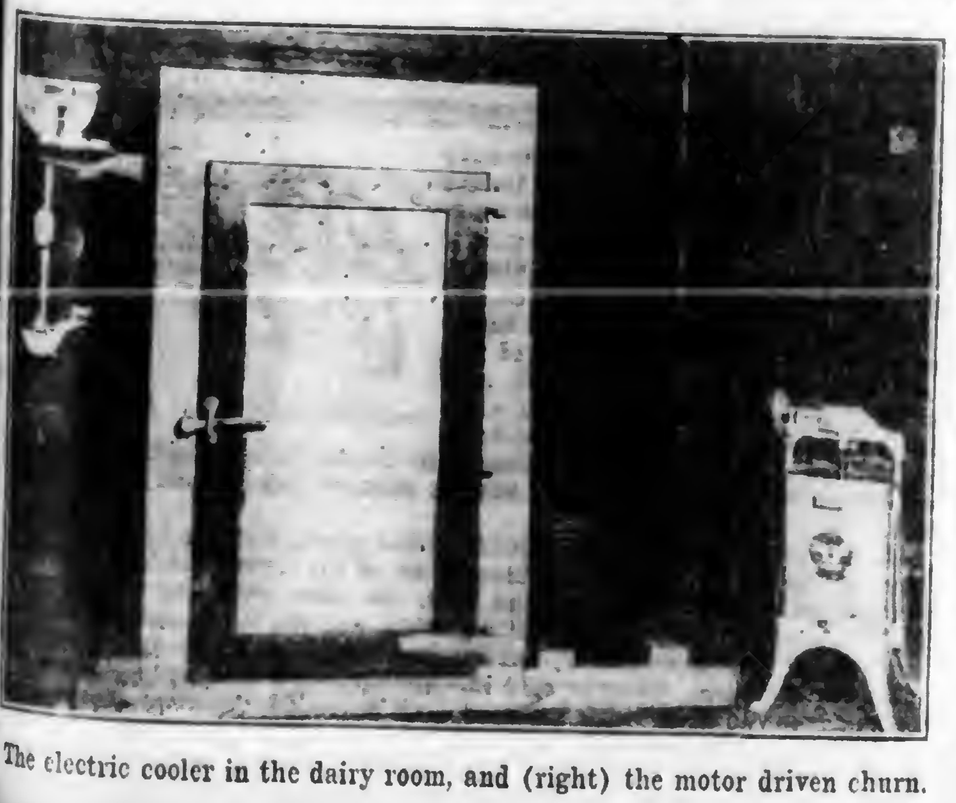
The milker used on the Electric Farm was one of the portable type commonly used in small dairies. The motor and pump are mounted on wheels and are connected by rubber hose directly with the double milker unit. There is no pipe line and no permanent installation of any kind.

The dairy room on the Rutherford farm was equipped for handling milk in either of two ways. There was that wonderfully neat combination, a cream separator with electric motor mounted right on the separator frame, and there was also an electric cooler for handling milk to be sold as market milk.

We are sure a lot of the women visitors were as much interested in the small motor driven churn as in many of the devices they saw in the house. For what is better qualified to bear the name "labor saver" than an electric churn? Maybe some farm boy will answer, "An electric grindstone."

The Iceless Milk Cooler

As you may see by the picture on this page, the milk cooler is like a very large refrigerator. At the left is the apparatus which cools the milk quickly as it comes from the milker. Then it is put in the cooler where the temperature may be kept uniformly low for as long a period as desired.

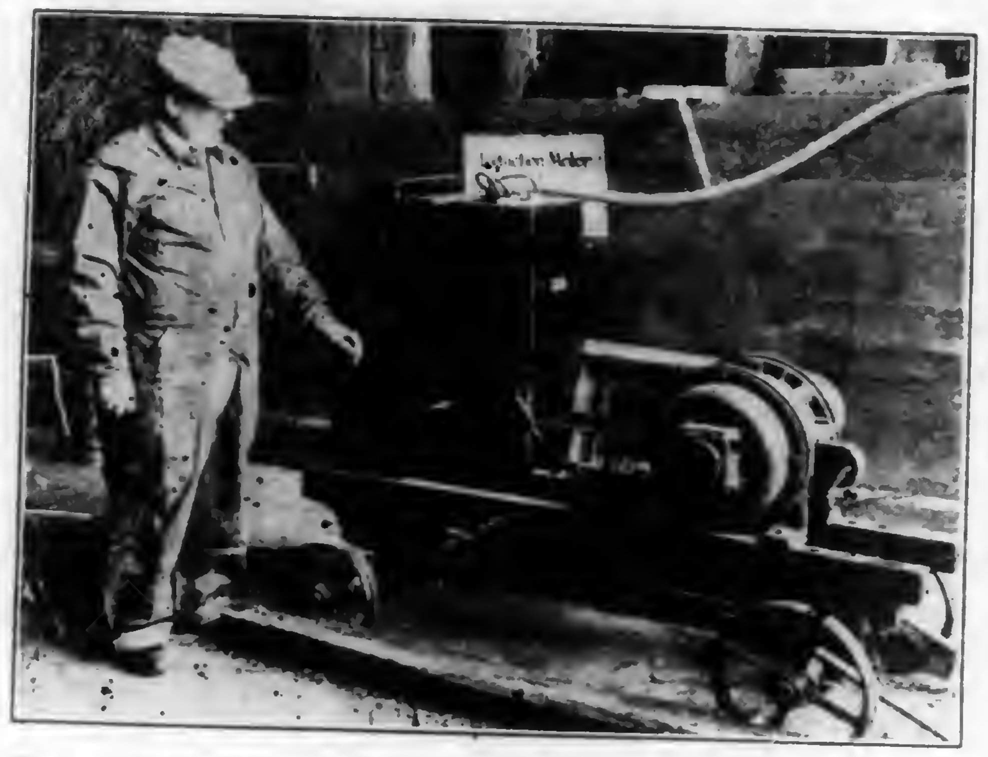


The electric cooler in the dairy room, and (right) the motor driven churn.

There is no ice to fuss about in this electric cooler. The quarter horse power motor which operates the refrigeration apparatus (at the right in the picture) turns itself on or off as needed. Inside the cooler is the control thermostat, and the tiny electric fan which keeps the air circulating so the temperature will be even thruout the chamber.

A device which wasn't needed during Farm Show week, but which would add a lot to the comfort of both man and beast in summer, was the electric fan in the stable. As many dairymen are using fans on their advanced registry test cows in summer, this is not a new idea. The cost of running fans is so slight that there might be real dollars-and-cents profit in using fans on ordinary milking herds. Has anyone done any experimenting along this line?

Besides the fan behind the cows there was an exhaust fan in the wall. An exhaust fan changes the air in a barn or a room every few minutes, keeping it fresh and clean. Altho it pumps out the foul air quickly there is no noticeable draft.



This ten horsepower motor operated the Electric Farm threshing machine.

A new contrivance in the dairy barn which attracted a lot of comment was the vacuum grooming machine. We prefer to call it the electric cow-cleaner, as that sounds more business-like, tho the machine would work as well on horses as on cows.

It operates on the principle of the ordinary vacuum cleaner. A circular brush of stiff bristles surroundings the opening at the end of the rubber hose connected with the vacuum tank. You brush the animal in the usual way; as the dirt is loosened it is drawn up thru the hose into the machine.

Do cows like the electric cow-cleaner? If they were able to talk they couldn't say "Yes" any more plainly than the heifer that stood near the machine in the Rutherford barn. Every time it was tried on her she humped her back and begged for more.

The electric clippers for use on livestock seemed to be a large scale reproduction of the machine which buzzes up the back of your neck and around your ears when you go into one of those rapid-fire barber shops for a haircut.

Even an Electric Floor Scrubber

The electric floor scrubber was on exhibition. There probably isn't much of a market for it now among dairymen, tho we know of some Pennsylvania producers of high quality milk who could use such a machine to advantage. We refer to those few who scrub the floors of their cow stables with water every day.

If you had occasion to go up to the barn floor during chore time you would light up the step by turning a switch in the stable. You could turn that light off again from above.

That is the beauty of the so-called three-way switch.—you don't need to go back where you turned the light on to turn it off again. It can be turned on or off from either of two switches.

OUR FARM

Where an Editor Works and Thinks

THE weatherman evidently resented the remarks made in this column some weeks ago about the winters in the East as compared with those of the mountainous part of Pennsylvania. At least he has been piling in winter weather with a vengeance for the last six weeks. Snows, drifts and zero weather have been our lot so long that we almost prayed Mr. Groundhog would not see his shadow on February 2. However, I firmly believe in the law of compensation, and this hard winter means that we shall have an early spring and a favorable summer season. (Such a belief makes us feel good now even if we learn later that it is a mistake).

* * *

FOR best results grapevines should be pruned during the next six weeks. If this work is left until the sap begins to move, the cut ends "bleed" and a good bit of the energy which would otherwise go to making vine and fruit is lost. Except where grape growing is a business no fruit-producing property is more generally neglected than the grapevine. When it is remembered fruit is produced on new growth only, and that the natural tendency of the grapevine is to start new branches without number, it readily can be seen that severe pruning is necessary in order to limit the amount of new growth and thus produce better and larger bunches. In fact, the amount of old wood left should be no more than is necessary to act as a support for the producing canes.

* * *

SEVERAL letters have been received asking for more information as to our plans for operating a thirty-acre farm without horses. Briefly, our plan is to use a small tractor of a certain make for plowing, discing and harrowing, and for cultivating the wide-spaced crops such as corn, potatoes, asparagus, strawberries, raspberries, etc. Also for doing the work of orchard cultivation. For close-planted garden crops hand cultivators and the garden tractor will be used. Of course trucks will be necessary to do the hauling and marketing.

* * *

THAT'S how it looks on paper. We can tell you better how successful the plan is after we have put it into operation. Of one thing we feel sure: that the plan is all right. Whether we can work it or not depends upon ourselves. The successful operation of any kind of farming business depends upon reducing the overhead expenses to the lowest possible point. The active field work in connection with operating a fruit and truck farm is done during six months of the year. The little or no work during the remainder of the year which a truck cannot do, makes the keeping of a team a big item of expense and care which we feel it is necessary to avoid if possible. It may be found necessary to hire a horse occasionally, at least until we get things started right.

* * *

I AM well aware that there are those who look upon such plans as being cold and hard-hearted. The horse has been so long the ally of man it seems almost inhuman to propose a plan for farming in which he shall have no place. His history is interwoven with the history of mankind and he has been a co-laborer in the progress made by man during all the ages. But necessity forces changes and sentiment alone cannot retain that which Economy says must go. Nothing has been more inspirational to the poet and the sentimentalist than the old oaken bucket and the well which our forefathers knew, but the conserving of health and human energy is recognized as more important and the old well and the moss-covered bucket have been forced to give way to modern water systems in the home.

* * *

ANOTHER factor in modern farming which makes for economy is doing the work of plowing, fitting and cultivating the soil so that only a minimum of hand work is necessary. If all this work is done right and in the right time crops may be kept clean. This means the use of the right kind of tools and the expert handling of them thruout the season, beginning with the plowing. Time was when a good farmer felt he was remiss if he did not hand-hoe his corn at least once and his potatoes two or three times. In those days labor cost from fifty cents to a dollar a day and board. No one can raise these crops that way now and make a profit.—R. P. K.

Little Girl (rushing into Doctor's office)—"Please, doctor, come at once to father. Mother's taken 'is temperature an' it's gone down."

Doctor—"That's all right, my dear—that's splendid."

"'Taint all right; it's gone right down. 'E've swallered it."

THE CHEERFUL PLOWMAN

A Neighbor Backslides

SMITH grew sick of milking Jerseys on the farm, and of lugging in the fodder on his arm, and of tramping after plows, and of filling empty mows, and of rising by a four o'clock alarm. He grew weary of the squealing of the swine, and the bleating and the bawling of the kine, of the crowing of the cock, and the cackling of the flock, and the buzzing of the beetle on the vine. He grew sick of wringing dollars from the dirt, so he puckered up his courage to desert, then he sold the stuff he had, said a fare-you-well to dad, and he changed the cut and color of his shirt!

Smith grew sick of all the clatter of the street, and the hurry and the skurry of the feet, of the autos whizzing by, of the smoky patch of sky, and the sight of somber coppies on the beat. He grew weary of the struggle for the "spawn," of his dinkey little garden, and his lawn, and the groaning of the trolley gave him chronic melancholy, and he hankered for the rooster-call at dawn. Then he sold the little business that he had and went shouting home to Mary with his scad, and he yelled, "Sew up the tear in the shirt I used to wear for we're going back to live beside of dad!"—J. Edw. Tufft.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The great thing in this world is not so much where we stand as in what direction we are moving.—Holmes.

Feeds and Feeding

LONG before we had studied the subject of nutrition, the experience of the human race had evolved the phrase, "The proof of the pudding is in the eating." Thru study and investigation during the past twenty-five years an immense amount of information has been gained as to the elements required to build and maintain the animal body, also as to what is needed to form milk, eggs, and other products. Some of the knowledge has been gained by scientific processes in the laboratory and some by carefully noting the results of experiments in the processes of the animal. At first too much dependence was, no doubt, placed upon the former and too little upon the later methods. At present, practical men are inclined to accept no purely theoretical method of feeding as final, at least until they have proven it correct by actual practice. With all his genius man has not yet been able to construct laboratory methods which work exactly as do the natural processes within the animal body. Stock feeders will do well to keep an open mind on the subject of formulas, no matter where they come from, and watch with a keen eye the results of the variations and experiments which every intelligent feeder should make for himself. Always, the best feed is the one which brings the best results at the least cost.

Up to the Legislature

THE fight against the Japanese beetle is carried on by the departments of agriculture in Pennsylvania, New Jersey and Delaware, co-operating with the United States Department of Agriculture. The estimates of the cost of carrying on this work which have been submitted to the state legislatures and to Congress were made only after the men in charge had conferred and decided upon the smallest amount of money that would enable them to carry on an effective campaign against the beetle. A budget was made up, and it was expected that each of the three states and the national government would assume a certain part of the cost.

But Congress has failed to appropriate the amount that was expected, and needed, from the federal government. Nothing at all was allowed for the continuation of the quarantine on the infested area. This means that the state legislatures will have to appropriate more money than was originally asked if the work is to be carried on with any degree of effectiveness. If the legislatures do not appropriate extra funds the beetle may be expected to make himself at home in all parts of the East within a very short time.

If you don't want beetles in your back yard, the least you can do is to tell your assemblyman that it is up to him.

Tax Commission's Report

THIS office has not yet been favored with a copy of the report made by the Tax Commission of Pennsylvania which has been at work studying needs and possibilities the greater part of two years. Because we believe our readers will be interested in a prompt review of the report we quote from an editorial in The North American:

"During the next two years the conduct of the public business in Pennsylvania will require $800,000,000, one-fourth of which will be taken by the state government and three-fourths by local authorities. That amounts to $100 for every man, woman and child; $500 for the average family. Few public questions are more important than the manner in which this vast sum is to be collected from the earnings of the people. That is the subject of the report. It analyzes the prevailing system of taxation, reveals its defects and suggests measures of revision, thru which inequities may be removed and the burden more fairly distributed.

"The complexity of the problem is due to the fact that the existing tax system is a patch-work creation of successive laws passed during the last century or more to meet growing revenue needs. There never has been a general revision, and the multiplicity of exactions, many of them overlapping, has resulted in great confusion and injustice. There are, to begin with, fifteen state business taxes, on the stock, charters, gross receipts and profits of corporations, on business enterprises, stock transfers, anthracite coal and so on. Then there are the automobile fees and gasoline tax, together with more than forty miscellaneous license fees. Local levies in addition include taxes on realty, personal property and miscellaneous fees of various kinds. The result, says the report, 'can scarcely be called a "system"'; it 'is rather an outgrowth of emergencies based upon numerous laws seeking revenue from a multiplicity of subjects.' It had led to the enactment of many special taxes, six new ones having been added in recent years. It is in many respects inadequate and inequitable.

"To remedy some of the defects the commission recommends reducing the bonus on corporation charters from one-third of one per cent to one-tenth of one per cent; inclusion of motor transportation, water power and hydro-electric enterprises with the public utilities taxed on gross receipts; shifting of the tax on marine insurance from gross premiums to net profits; repeal of taxes on gross receipts of notaries public and building and loan matured stock, and on stock transfers; increase of license fees for heavy motor-trucks; enactment of laws providing for uniform basis of property assessment; taxation of many classes of property now exempted; reduction in cost of collection of county taxes; assessment of mineral lands upon market value and output instead of market value alone; simplification of assessment and more rigorous collection of four mills tax on personal property; repeal of inheritance tax on personal property of non-resident decedents. The report embodies drafts of acts and constitutional amendments to carry the recommendations into effect.

"Besides advising these immediate changes in the system, the commission presents, without recommendation, a plan for a permanent fiscal policy drafted by Commissioner John P. Wood. Its main proposals are, first, abolition of all other forms of business taxation and the substitution therefore of a uniform tax upon the net profits of all business enterprises; second, abolition of the poll, occupation, school capitation and personal property taxes, and, to replace them, the enactment of a state income tax.

"Correctly foreseeing that the income tax suggestion will be stubbornly opposed, the commission says it 'would view its imposition with great reluctance, and would only be willing to consider it as a substitute for existing taxes.' But in another section it 'recommends that serious consideration be given to the plan of abolishing the personal property tax and replacing it with a low flat-rate income tax.' Except for this highly controversial and unpopular proposal, the report offers sound suggestions for making our tax system more productive, easier to administer, and, above all, more equitable."

Follow It Up

TWO weeks ago we published an open letter to the members of the Pennsylvania legislature, calling their attention to the appropriations needed for remedial and preventive work for the next two years. We tried to point out the costly results of the possible failure to provide sufficient money at thi time, and to show that a generous expenditure now for the purpose of preventing further loss thru the spread of bovine tuberculosis and destructive insects would be re economy in the end. We mailed a copy of th paper containing the letter to each memb of the legislature. What is needed now is fo every citizen to write his state senator an representative urging action along the lin suggested. Do it now.

Disgraceful and Costly

THE government of Pennsylvania may likened to a vast machine having a gre number of wheels and wheels within wheel But the trouble just now is that the cogs d not mesh and the machine doesn't wor Sometimes the orderly transaction of busin is blocked by the existence of partisan diffe ences when two parties are about equal represented. But in Pennsylvania where th government is almost completely in the han of a single party, we find that party so sp up into factions and cliques, each headed would-be political bosses, that the best interests of the whole state are likely to be ov looked entirely. Would that there were so way of making them understand that people are interested only in efficient, ec omical government and not in the perso ambitions of would-be party dictators.

Old Age Pensions

THE court decision declaring the Old A Pension Act unconstitutional in Pennsy vania will, no doubt, be joyfully received those who are opposed to the principle. B those who consider the subject from no oth angle than that of the potential cost will d well to look further into the question. So ety's indigent must be maintained as a matt of social justice, and figures indicate th this may be done more economically as we as more humanely by the pension system th by the "poor house" system. A recent i vestigation in New York showed that it c $28.40 a month to care for a child in instit tions and only $15 a month by the mothe pension plan. Besides, the child is much b ter off under its mother's care than it wo be in an institution.

Washington Letter

CAPPER-WILLIAMS BILL REVISED.—Senator Capper, of Kansas, and Representative Williams, of Michigan, have reintroduced the Capper-Williams bill revised and abridged to conform to the recommendations of the President's conference for the creation of the Federal Co-operative Marketing Board. The aid of the organization is to be extended to co-operatives only "upon application." This is evidently the kind of measure the members of the conference had in mind when they made their report.

BACKED BY THE PRESIDENT.—It has been given out from the White House that President Coolidge stands behind the Capper-Williams bill. Nevertheless, Chairman Norris, of the Senate Committee on Agriculture, has announced that he does not think the proposed legislation of the President's agricultural conference can be enacted at this session, and that in his judgment it does not go far enough.

SHOALS BILL IN CONFERENCE.—The Underwood bill providing for private or government operation of Muscle Shoals, having passed the Senate, is now in conference. Following a conference of farm organization representatives at the Department of Agriculture to consider the Muscle Shoals proposition, Secretary of Agriculture Gore and several specialists from the Department of Agriculture sat with the conferees, when consideration was given the fertilizer provisions of the measure. The conferees were told that the production of nitrogen for fertilizer and explosives would consume only a small amount of the available power and that other useful chemicals could be produced, including phosphoric acid. It was said that Muscle Shoals was ideally located for the production of aluminum, carbide and by-products.

NO EXTRA SESSION.—President Coolidge has announced, however, that while the Senate will be called in extra session on March 4 to confirm cabinet nominations, he has no intention of calling an extra session of Congress to consider farm legislation after March 4. He has been informed by members of Congress from the agricultural states that there is no need for immediate action.—E. E. Reynolds.

Harrisburg Letter

LOADING UP THE ROAD SYSTEM.—Demands for inclusion of local roads in the state's main highway system have been coming so thick and fast in the Legislature that it is going to require almost as much tact and skill to get an agreement upon what may be handled as it will be on how much money this general assembly is going to have to appropriate for the coming two-year period. Not only have dozens of proposals for roads to be added to the system been introduced in separate bills, but the whole of the list of 117 new routes the lawmakers of 1923 tried to put over has been placed on the Senate calendar for action.

ALL WANT MORE TIME.—One of the interesting features about the reports of various commissions working the last two, four or six years in the making of codes is that all seem to want to be extended for two years for "further study." The State Tax Commission, which has filed a rather lengthy report and attracted much attention by avoidance of direct recommendations on big subjects, has asked to be continued and a bill for such an object with an appropriation of $45,000 is in hand. Others want to be given more time and money.

FAVOR CATTLE BILL.—Considerable support is being found for the proposal to appropriate a million dollars to clear up tubercular cattle and the way the matter now stands it will go thru unless it is used as a club in some of the political guerilla warfare getting started on Capitol Hill. The data compiled at the Department of Agriculture has been given careful study by groups of legislators the last two weeks.

MONEY FOR SCHOOLS.—The state ought not to have much difficulty in getting started on payment of the school districts of the state this spring because the treasury has been fattened by payments of anthracite tax and there has been a steady flow of collections by the auditor general. Fourth class districts will be paid first.—Hamilton, Harrisburg.

New Jersey Letter

GAS TAX MINORITY REPORT.—Agricultural and allied interests have signed a minority report on the gasoline tax investigation authorized by the Legislature last year. It will be recalled that a commission was appointed by the Governor to submit a report which could be acted upon by the present session of the Legislature, with reference to a gasoline tax in New Jersey. The views of the majority report were not considered applicable and just to the farmers. The minority report advocates a drivers' license fee of $3, a flat fee of $3 for passenger cars, a gasoline tax of 2c per gallon to be collected from the wholesaler, and a flat fee of $3 on motor busses carrying eight passengers and less, and the present rate on larger busses. The Grange, Farm Bureau, and State League of Municipalities advocate a heavier fee on motor trucks, in proportion to gross weight of trucks and load. The State Highway Commissioner advocates retention of present figures.

HEARING ON BEETLE APPROPRIATION.—In order to secure full government support in control of the Japanese beetle in New Jersey, the state has been advised that it must increase its own appropriation for such work. The appropriation's bill, as drawn up, did not grant a sufficient amount. The organized farm groups in New Jersey selected a committee of four to represent them at a hearing last week before the Joint Appropriations Committee. The farmers called attention to the continued inroads of the pest in central and western New Jersey counties, and urged a correction in the appropriation figure so as to allow full government support.

REGIONAL FARM BUREAU RALLY.—Farm bureau officials from the eastern states will gather at Trenton, N. J., February 26 and 27 as guests of the New Jersey Federation of County Boards of Agriculture. This annual eastern rally will bring to New Jersey the leaders in farm bureau organization, educational and co-operative marketing effort. An enthusiastic conference is in prospect to which all farm bureau members in New Jersey and adjacent states are invited.—B.

New York Letter

RURAL SCHOOLS AND THE STATE BUDGET.—A recent conference between party leaders and the Board of Regents on aid for schools failed to agree. There are four main propositions now before the Legislature, all calling for increased state aid for rural schools, and most of them include city schools. The Regents favor a plan by which the state would pay fifty per cent of all teachers' salaries, with a minimum payment of $700 and a maximum of $1200. This would cost the state $40,000,000 more than it now pays. Another plan would require the state to pay all school expenses [illegible]ed by a four-mill tax. The total expense per elementary pupil to be not over $70, and per high school pupil, $140. The Governor believes it possible to help schools and still to reduce the income tax twenty-five per cent, while party leaders say that if any of the four main plans are adopted the 1925-6 state budget would be about $185,000,000, an increase of $35,000,000 over last year.

OUTLOOK FOR FARMERS' WEEK.—State Grange is having difficulties with its annual meeting this week on account of heavy snows. Fears are entertained that the splendid Farmers' Week attractions may not have the usual attendance next week.—M. G. F.

PLANT STOKES SEEDS
for The Very Best Vegetables

By concentrating our entire effort on vegetable seed problems, we have developed certain seed stocks which should have a place in every gardening operation. Don't fail to give Stokes Seeds a trial this year. You will quickly see the difference. No planter should be satisfied with his seed unless it is the best obtainable.

Our policies include:
1. Simplified variety list—emphasizing only the very best stocks.
2. Germination tests printed on every package.
3. Chemical treatment of all seed for the eradication of surface-borne disease.
4. Orders filled the same day as received.

American-grown Medium Red Clover

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

Crops for City Trade

I am a farmer and for the last four months have been taking our fresh eggs to Philadelphia direct to customers; also dressed chickens and about fifteen bushels of potatoes, making a trip about every two weeks. I have been wondering what truck crops I could most profitably grow to take along with eggs and chickens during summer months when I shall not be loaded with potatoes. Would like to ask you a few questions concerning sweet corn, lima beans, etc.

The Questions

1. Is Barden's Wonder Bantam a variety that would delight customers?

2. Are the ears of this corn large enough to justify asking the same price per dozen as for any other variety?

3. Would you hold to this one variety, planting it every two weeks thruout the season? If not this variety, what single variety would you recommend to hold and please customers?

4. With hills three by three feet would you leave two or three stalks per hill?

5. What variety of pole lima beans would you recommend for shelling best, quality considered?

6. With a fair crop, about how many hills would you estimate it would take to yield thirty or thirty-five quarts of shelled beans per week?

7. What would you consider an average city retail price per quart?

Thanking you for this information and any other suggestions you might make.—L. E. R., Kent County, Del.

Customers Best Advertisers

The prices you obtain and the varieties you ought to plant for the Philadelphia trade will depend largely upon the kind of trade you have. If it is with the well-to-do people, you will expect better prices and can plant varieties of better quality than the average. This is the only class of trade you can afford to go so far to serve, it seems to me, because the cost of running the car will be a heavy charge against the profits of every trip.

You have a big advantage in having friends already buying from you; these will be your best advertisers if your products are first rate.

The answers to your questions are based upon the idea that you intend to serve a high class trade.

The Answers

1. I do not know this variety personally, but assume that it is a strain of Golden Bantam. This undoubtedly is the highest in quality of all sweet corn varieties, but is small. You had better find out before you plant it whether your patrons are well acquainted with yellow sweet corn.

2. A high class trade, when it knows the sweetness and tenderness of Golden Bantam, should be willing to pay as much for the small ears as for large ones of other kinds on the market at the same time. You understand that when corn becomes very plentiful even those kinds of best quality will drop in price.

3. Bantam will do as well as any other one variety for planting every two weeks. I doubt, however, whether plantings of this very early variety made as far apart as that will give you high grade corn every market day. Ten days is the longest period I would consider safe for this variety.

4. If the land is good you can leave three stalks to the hill. With a larger variety two will be enough.

5. For quality in pole beans I would like the Challenger or potato lima; for sureness of crop the King of the Garden is a leader.

6. Three or four hundred hills, with three plants per hill, should provide this many beans. It is a big job to shell that many, however.

7. Fifty cents a quart.—W. C. Pelton.

Who Pays the Heaviest Taxes?

EIGHTY-SIX per cent of the profits of agricultural corporations and allied industries in the United States in 1922 was paid out for local, state and federal taxes, according to an analysis of tax statistics by economists of the United States Department of Agriculture.

This tax of 86 per cent of the profits of agricultural corporations was higher than that of any other type of corporate enterprise, the department says, and bears out the belief that taxes on agriculture generally are usually higher than taxes on other lines of industry, when measured in terms of income.

Local and state taxes alone took sixty-five per cent of the profits of agricultural corporations, which was a higher percentage than all taxes combined on the profits of other corporations, the figures show.

What Other Corporations Pay

Taxes on other corporations were: Mining and quarrying, 62 per cent; professional corporations, hotels, theatres, and other service organizations, 40 per cent; transportation and public utilities, 37 per cent; construction, 35 per cent; finance, banking and insurance, 32 per cent; wholesalers, jobbers, retailers, commission merchants and other trade agencies, 28 per cent; manufacturing, 25 per cent, and ungrouped corporations 31 per cent.

The department's statement is based on income reports from 9091 corporations engaged in agriculture and kindred lines to the Bureau of Internal Revenue. Of this number 7747 were farm corporations, over half of which reported an actual deficit at the end of the year. It is the belief of the department that property taxes were an important factor in bringing about the losses shown by these corporations.

Won on Certified Seed

FOLLOWING are the winning exhibitors of Certified Potatoes at the Pennsylvania Farm Products Show whose names were omitted when the other potato awards were published. Twenty-five growers exhibited in this class.

Sunshine in the Dark

Winter days, cold, dark, raw or rainy, have no effect on early chicks fed on Ful-O-Pep Starter. The nutritious oatmeal base plus the cod liver oil content feeds June sunshine right into their bones and tissues

What were your early chick losses last winter?—20%, 30%, or more? Wipe them out. You can.

On thousands of farms, poultry raisers have reduced winter chick losses to one, two and three per cent, through the use of Ful-O-Pep Starter, the famous starting feed in which cod liver oil has been scientifically combined with the oatmeal and other highly nutritive elements, right *in* the feed itself.

On these farms Ful-O-Pep Starter is proving itself the equivalent of summer sunshine in overcoming leg weakness and promoting swift growth.

Chicks that die are a drain on your investment

Every poultry raiser has learned to expect a certain loss of early chicks under three weeks old. If you saw your grown birds dying off in groups of three, ten, fifty or more, you'd be in a panic. Yet every baby chick is a grown bird in the making—a potential profit-maker in eggs or meat. And every one that dies is a dead loss—just so much deducted from your profits and your investment in equipment—houses, incubators, brooders, fuel, feed and labor.

Stop these losses—raise ALL your chicks to maturity and profit

It is easy to test the vitalizing, growth-promoting effects of Ful-O-Pep Starter at trifling cost. Divide a hatch of baby chicks, putting half on Ful-O-Pep, the other half on your accustomed starting ration. Watch for leg weakness. You will find none in the Ful-O-Pep pen. As it develops in the other pen, switch the chicks over to Ful-O-Pep and watch them come up on their feet.

Then after six weeks compare the average weight of chicks in these two pens.

You'll see what six solid weeks of sunshine, feeding with Ful-O-Pep Starter, means in bringing chicks to quick maturity.

Read what these users say

June 3, 1924.

I have just brought 510 chicks out of 523 to their 7th week on FUL-O-PEP Chick Starter fed according to your instructions in the FUL-O-PEP Poultry Book, with the exception I did not use alfalfa as a litter—plain straw.

I am getting in 500 more chicks and will feed them the same as I have the first 500. I am using the complete line of your feeds this year and will see how I come out at the end of the year.

(Signed) Geo. A. Giles, Bensenville, Ill.

July 25, 1924.

It might interest you to know that we made six-pound cockerels at four months of age and had pullets laying before five months old. We breed high class show birds of S. C. Rhode Island Reds, and while we raise these on a farm where we raise all kinds of feed, we sell our home grown feeds and buy and feed exclusively the FUL-O-PEP Way; we find that it pays to do this on account of the early maturity and finish of the birds. Next year we plan to raise 1000 birds.

Thanking you for past favors, we are,

(Signed) Kelly & Wiley, Cambridge, Kansas.

Ful-O-Pep Starter is a wonderful labor saver. Just put it in the hopper and let the chicks go to it. It is a fine, dry mash and will not cake or gum.

Some good dealer near you sells the Ful-O-Pep line of feeds. See him. Talk it over with him. He can supply your needs.

FREE—Ful-O-Pep Poultry and Record Book

Containing 52 pages of authoritative instruction on poultry raising and many of the essential points contained in our famous correspondence course. Send the coupon.

FUL-O-PEP CHICK STARTER

A Product of the Quaker Oats Company

Feed Ful-O-Pep Chick Starter first six weeks, for strong bones and swift growth

Feed Ful-O-Pep Fine Chick Feed from second to sixth week

Feed Ful-O-Pep Growing Mash from sixth week through five months

Feed Ful-O-Pep Coarse Chick Feed from the sixth week to the fifth month

Begin feeding Ful-O-Pep Egg Mash at fifth month and feed all year round

Feed Ful-O-Pep Scratch Grains from sixth month on—one quart per day to each twelve birds

Name ....

Address ....

My Dealer's Name ....

John Shutt teaches his dad a lesson in spud growin'—

Mr. Shutt thought he knew a lot about growing potatoes, but his son John taught him a profitable lesson. This is how he did it:

On the Shutt farm in Garrett, Indiana, father and son each raised a crop of potatoes on adjoining plots of land. John used certified seed and plenty of high analysis complete fertilizer, while his dad used common seed and no fertilizer.

When the crops were dug, Mr. Shutt could hardly believe his eyes. His son dug up 227.6 bushels to the acre at a cost of 36 cents per bushel, while Mr. Shutt himself obtained only 75 bushels per acre at the high cost of $1.13 per bushel. Thus, John proved to his dad that good seed plus complete fertilizer results in *higher yields at lower cost per bushel.*

Pennsylvania farmers will be interested in the experiment made by C. B. Kreider, of Lancaster County, Pennsylvania. This grower raised potatoes on a clay soil fertilized with 1,000 pounds per acre of a 3-8-10 mixture. Crop results showed that when the 10% potash was left out of the fertilizer mixture, the yield was 15 bushels less. In other words, *the addition of 10% potash from sulfate increased the yield 45 bushels per acre.*

The results of many experiments show that 80 to 100 pounds per acre of actual potash applied with nitrogen and phosphoric acid give profitable returns. Use the right amount and the right kind of potash in your potato fertilizer this season. Potash Pays!

FREE: Our new booklet, "Better Potatoes," contains a lot of helpful information on potato growing. It is being sent to potato growers free of charge. Write for your copy now.

Late Cabbage Costs and Prices

Growers Are Baffled by the Market's Ups and Downs

By W. C. Pelton

Staff Contributor and Adviser

AS GROWERS of late cabbage for winter storage review the season that is now passing, looking back to the low prices that prevailed in the late fall and the sudden rise that took place after the holidays, they are sure to ask themselves the question that always comes up at this time of year, Is it worth while to grow this crop?

We can all recall that one year during the war late cabbage went up to over a hundred dollars a ton before spring brought in southern stock; but then, there are other years on the calendar when we could do no better than feed cabbage to the stock.

A few growers who have a retail trade, especially those living in the less accessible parts of Pennsylvania near the mines, may not suffer such steep ups and downs in price, but sooner or later every cabbage grower begins to count the cost of growing the crop and to wonder how long he can afford to encounter the uncertainties of cabbage marketing.

Cost of New York Cabbage

Figures recently published by Cornel University furnish interesting facts on the returns that have been realized by a number of New York farmers during the three years ending with 1923. These facts will appeal to growers in different ways, depending upon their native optimism or pessimism. Every grower of late cabbage can profit, however, if he sets down costs for his own crop of 1924 beside the costs of these New York farmers, and determines what the cost of his cabbage per ton and per acre has been. The New York figures are given in the table on this page.

It is easy to see by these figures that the cost of labor is the chief item in the cost of this crop, as it is with most market garden crops, tho not always with truck crops. If a man were sure of a dollar an hour for his labor, even tho this is not as much as mechanics may get, he might be satisfied. But how about losing sixteen cents for each hour he works? Even the average value of human labor for the three years is not high, just forty-five cents.

Economic Laws Didn't Work

Another fact in this table shows that the laws that are said to govern supply and demand may apply to whole nations, but they do not always affect local growers in the same way. In the years 1921 and 1922 these growers got their biggest gain and suffered their largest loss, yet the yields for the two years were not much different. This was due to the much higher price in 1921, which was undoubtedly caused by conditions in other parts of the country.

In 1922 and 1923 the cost per acre of cabbage was much the same. The yield in the first year was almost half again as much as in the second year, but the price of cabbage in 1923 was almost twice as high as in the preceding year, so that labor used for cabbage in that year earned all of eleven cents, whereas in 1922 it was worse than valueless so far as profits were concerned.

The only sure thing that one may learn from statistics of this kind is that in the long run the man whose costs are lowest is most likely to come out ahead. He will not always make a profit—no cabbage grower can get ahead so long as cabbage sells as low as six dollars a ton—but if he must grow cabbage, the saving of all costs so far as the needs of the crop for plant food and good culture will permit, is the first step in profitable late cabbage growing.

Cornell's Figures on Late Cabbage Costs

	1921	1922	1923
Number of farms	13	8	4
Acres per farm, in cabbage	3.5	5.0	3.7
Yield, tons per acre	6.9	6.3	4.4
Hours human labor per acre	117.8	69.3	102.6
Hours horse labor per acre	86.5	63.5	53.7
Cost of lime and other fertilizer per acre	$7.89	$8.05	$1.82
Cost of manure per acre	9.18	7.50	11.33
Total cost per acre	115.88	74.58	73.16
Cost per ton	16.00	11.61	15.36
Market value per ton	26.11	5.85	11.24
Profit or loss per acre	69.45 profit	36.23 loss	18.22 loss
Returns per hour of human labor	1.00 profit	.16 loss	.11 profit

What Are You Worth?

W. F. KNOWLES, of the New Jersey State College of Agriculture, makes these suggestions which may help those who are taking a farm inventory for the first time:

"The inventory may be taken under such headings as Real Estate, Horses, Cattle, Poultry, Other Livestock, Equipment, Crops and Supplies for use and for sale, Cash in Checking Accounts, Notes and Accounts which are owed to the farmer, and Notes and Accounts which the farmer owes others. A person taking an inventory of his own business must use good business judgment in placing inventory values. The real estate should be inventoried, for example, at its sale value, not at what the owner would sell it for. So, too, livestock, poultry, equipment and crops and supplies should be inventoried at their sale value at the farm.

Finding Where He Stands

"After the owner takes an inventory he should then take another sheet of paper and make out a credit or financial statement. Under Assets he should list the inventory value of Real Estate, Livestock, Equipment, Crops and Supplies, Cash in Bank, and Notes and Accounts due him from others. A total of these items will give the Total Assets of the farm. Under Liabilities he should list his Notes, Mortgages and other Farm Obligations which are due others. These obligations added together give the Total Liabilities.

"The Total Liabilities subtracted from the Total Assets gives an important figure—the Present Worth or Net Worth. It is the amount which the farmer himself has invested in his own business.

"Inventories when kept up regularly make it possible for the farmer to compare them from year to year and to make a sound study of his farm business."

HOW R.F.D. STARTED

It Took a Long, Hard Fight in Congress to Secure Rural Mail Service

THE rural mail service is now so much a part of the everyday life of country people that probably few of the younger generation of farmers realize that Rural Free Delivery is an institution of comparatively recent origin.

It was Postmaster General John Wanamaker who first officially suggested in 1891 the rural mail idea to Congress. The plan was fought in the legislative branch of the government for five years before it was given a tryout.

The first bill authorizing the establishment of the service was introduced in the House by Representative James O'Donnell, of Michigan, January 5, 1892. It carried an appropriation of $6,000,000, but failed of passage. A year later Congress was induced to appropriate $10,000 for experimental purposes, followed in 1894 by $20,000 more. Mr. Wanamaker, believing the amount insufficient even for experimental service, declined to use the money.

First Routes in West Virginia

On January 9, 1896, $10,000 was added by Congress and on October 1, the same year the first experimental rural delivery service was established simultaneously on three routes in West Virginia, one from Charlestown, one from Uvilla, and one from Halltown. From this small beginning, nine months later found the service operating on eighty-two routes emanating from forty-three postoffices in twenty-nine states. Twenty-eight years later, or June 30, 1924, the rural mail service had grown to 44,260 routes with a total mileage of 1,205,714.

The first county to be completely covered by rural mail service was Carroll county, Maryland, where county service was established December 20, 1899.

Illinois Leads the Nation

Illinois leads the nation both in the number of rural routes and in mileage, there being 2637 routes covering a distance of 70,677 miles in that state. Ohio is second with 2542 routes and a mileage of 63,820; Missouri third with 2252 routes covering 56,074 miles; Iowa fourth with 2229 routes covering 60,734 miles; Texas fifth with 2193 routes covering 59,998 miles; Pennsylvania sixth with 2036 and 53,385 respectively; Kansas seventh with 1902 and 55,464 respectively, and New York eighth with 1863 and 47,130 respectively.

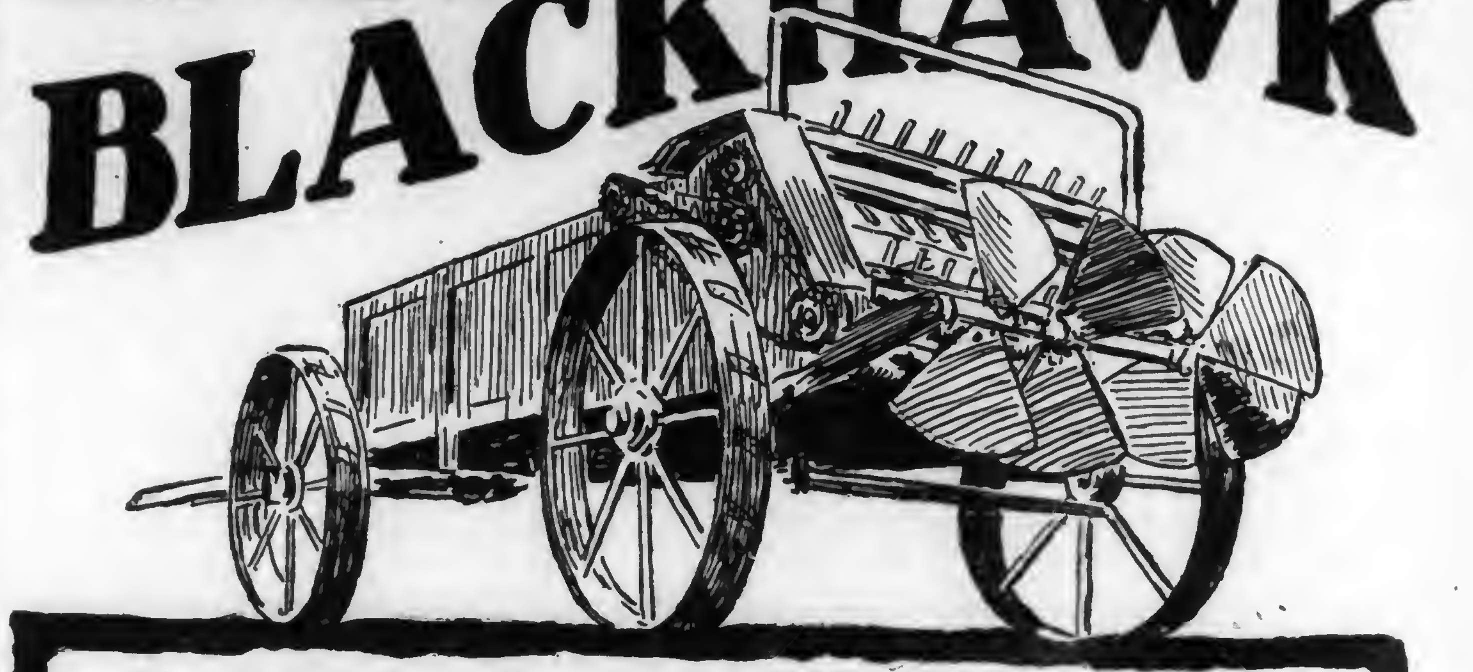
Maryland has 429 routes covering 10,542 miles; New Jersey 306 routes covering 7922 miles, and Delaware 103 routes with a mileage of 2758.

The scarcity of pepole in the large state of Nevada is indicated by the fact that there are but four rural routes in that State.

Ran Down a Wolf

A FULL grown timber wolf is reported to have been run down by an automobile on the Mercersburg-Corfoss road in Franklin County. It is believed that it wandered down from the North Mountain. The automobile that killed the animal was driven by C. W. Worthington, of Williamsport, Maryland. Colonel Henry W. Shoemaker is endeavoring to secure the pelt for the collection of the State Museum at Harrisburg.

The NEW BLACKHAWK



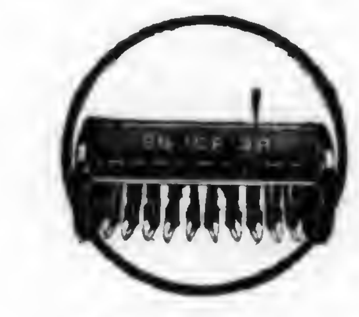
A SUPERIOR Product

THE NEW BLACK HAWK MANURE SPREADER 40-A, scientifically designed and durably constructed, is truly a Superior product. Made in the same factory that produces the famous Superior Grain Drill and other quality implements—and backed by an ***equally strong guaranty.***

The Black Hawk does not merely unload manure or dump it on the hit-and-miss plan—it ***thoroughly shreds*** and ***pulverizes*** it and spreads it widely and evenly, ***literally carpeting*** the ground in any quantity desired.

The scientific construction of the power transmission unit—the counter balanced feature of the wide spread device and the proper location of the ground wheels, all under the load, make it the lightest draft spreader on the market. ***A two-horse spreader.*** Does perfect work on both hillsides and level ground.

Get the full fertilizing value of the manure by using a Black Hawk—the Manure Spreader of Superior Quality. Write for descriptive folder.



SUPERIOR Grain Drills

ALL Superior planting machines are ***precision tools.*** All are designed for ***utmost accuracy in planting.*** To deposit a given quantity of seed ***uniformly***—into ***every*** hill or row—at a ***measured depth***—and to ***cover every seed perfectly***—these are the features you can rely on to the limit when you select any planting implement carrying the Superior name.

You are assured of absolute seeding uniformity when you buy the Superior Grain Drill—***the world's standard for more than fifty years!*** Valuable booklet "Drilling for Gold" free on request. Write for detailed information.

The DETROIT-ALLIANCE is a Proven BIG HATCHER

THE Detroit is not an untried incubator. For years it has been turning out bigger hatches of fine husky chicks for poultry raisers all over the country. That's why I can so unconditionally guarantee it to out-hatch and outlast any other incubator made, regardless of price.

Shipped complete ready to use except putting on legs.

All the features of machines costing twice as much you will find in the Detroit-Alliance. Double walls with dead air spaces between for keeping out the cold and holding in the heat, big nursery, special thermometer holder that keeps thermometer in plain view from outside yet up where chicks can't break it while hatching, automatic heat regulator, copper leak-proof hot water tank with rounded elbows for even distribution of heat in hatching chamber—in short everything that insures large hatches of strong, vigorous, fast growing chicks, is built into the wonder Detroit-Alliance Hatcher.

Freight prepaid east of the Rockies and allowed to points beyond.

Special Combination Offer

Carries 140 chicks through the critical five weeks following hatching. Double walls, hot water heat, durably constructed yet light and easy to clean. A triumph of mechanical ingenuity.

By buying both machines at one time you get not only the best, most complete profit hatching outfit on the market but you get it at tremendous savings—so big, in fact that if you tried to get the same value anywhere else just the incubator alone without a brooder you'd have to pay more than what I am asking for both machines. *Write now—get my catalogue and sensational combination offer.* Study Detroit-Alliance features and compare, both in quality and price, with any other incubator or brooder ever built. *Write today!*

THE GREATEST SCIENTIFIC INVENTION KNOWN FOR POULTRYMEN-GARDENERS-FARMERS 1/8 TH THE COST OF GLASS

Warp's Unbreakable

FLEX-O-GLASS

Weather-Proof-Airtight-Transparent

The Only Practical Thing for Covering Hotbeds and Chick Scratch Sheds

Flex-O-Glass is absolutely the only thing for hotbeds and temporary greenhouses. Throws a soft even heat. Does not chill as quickly as glass. Retains warmth better. Costs less. Easier to install. Develops stronger rooted plants that grow faster. Make your hotbeds of Flex-O-Glass. It will pay for itself many times over.

Flex-O-Glass is a wonderful new invention for keeping baby chicks healthy. Make a Flex-O-Glass covered scratch shed or brooderhouse for them in a jiffy. Give them that needed exercise in dry quarters instead of letting them out in the slush and rain to become chilled and die. Flex-O-Glass lets in the necessary sun's rays, the only health and body builder nature offers us—why not use it? It puts them full of the life, pep and vitality they must have for fast and hardy growth.

Flex-O-Glass has a specially treated cloth base for strength and durability; treated with a transparent weatherproof preparation which admits the beneficial rays of the sun. Ordinary glass does not admit the ultra-violet rays, so essential for retaining health and stimulating growth. Flex-O-Glass withstands all kinds of weather. Is absolutely waterproof. Comes in roll 35 inches wide. Easily installed. Just a hammer, nails, and shears. Use it at 1/8th the cost of glass for enclosing screened porches, storm doors, storm windows, barn and hog house windows, and many similar uses. We sell direct to consumer, thus giving you lowest possible price. 10 Days' Trial. Money back if not satisfied. Use it 10 days. If then not satisfied return Flex-O-Glass and we will cheerfully refund your money. That's fair isn't it?

PRICES—ALL POSTAGE PREPAID

Single yard (35 in. wide) 50c. 5 yds @ 40c. 10 yds. @ 38c. 25 yds. or more @ 32½c per yd.

Hens Are Crop Bound

I would like to know what ails our chickens. They stand all drawn together and their crops seem all swollen. With all the attention we give them they die when they take sick.—W. C. D., Montgomery County, Pa.

The swollen condition of the crop indicates a hen is crop bound. This is caused by eating straw, potato peelings, silage, corn fodder or any kind of material that is hard to digest which may clog the digestive tract. Sometimes the material can be softened by kneading after the hen has been given a tablespoonful of castor oil. Sometimes an operation is necessary.

Balanced Ration Best Preventive

The practical way to prevent crop bound hens is to provide a balanced dry mash and fresh green feed. Then they satisfy their craving for food with clean, easily digested material. They are not so apt to eat litter and start a clogging of the digestive tract. An occasional bird may become crop bound under the best of management but it usually occurs when the hens do not have dry mash before them at all times.

Crop bound is a common ailment among hens when they are first turned on the range after spending all winter on a ration shy of dry mash or green feed. Such hens are apt to fill up on tough grass of the previous year's growth and this sometimes binds in the crop.

Hens should be promptly treated when the crop bound condition is first noticed. Otherwise the poison generated in the system due to the condition of the crop makes the bird very sick.—R. G. Kirby.

Cause of Winter Moult

I have a small flock of Reds, about twenty-five, and one of them is just shedding now and two or three others haven't moulted yet. I would like to know whether the feed has anything to do with it and also whether this is a rare occurrence.—R. E., Wayne County, Pa.

Pullets that lay early in the fall sometimes go into a winter moult. It is believed that the birds moult because they have stopped laying and not that they stop laying because they moult. The pullets sometimes lay heavily and pull down their bodily weight. Nature has a remedy for that condition. Egg production ceases until the strength and vigor of the bird is built up.

Feeding Has an Influence

Pullets that receive a lot of laying mash and not enough hard grain are the most apt to moult in the winter. The mash furnishes the elements for egg production. The hard grain keeps up the weight of the birds. Feeding plenty of corn helps to maintain the bodies of the birds and prevent the moult.

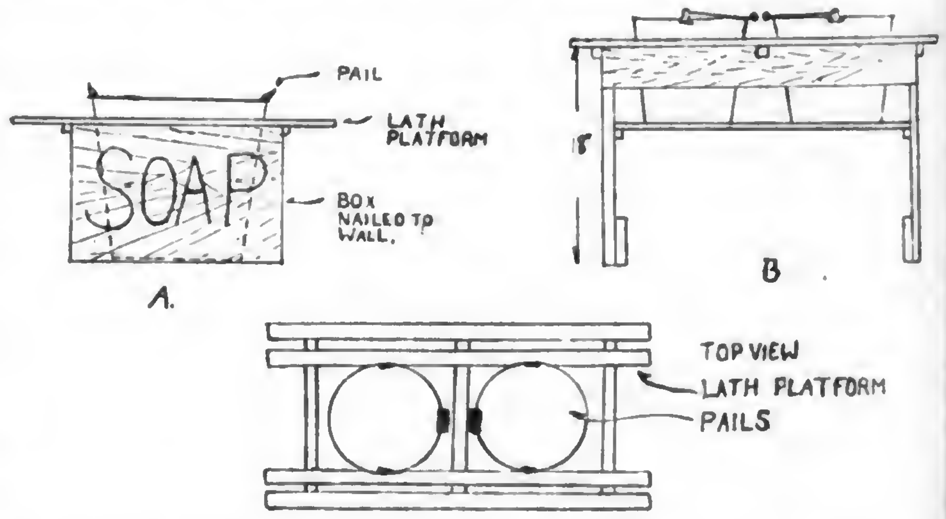
It takes quite a little skill to hatch early and obtain a good fall egg production without having some of the pullets make at least a head and neck moult. If the flock is of varying ages and all on the same ration, a few birds may go into a moult while the remainder continue to lay. If your birds are hens instead of pullets, you may have some very late moulting hens. If they moult rapidly and keep in good condition they should be very fine breeders.—R. G. Kirby.

They Lay Tinted Eggs

Could you inform me as to what makes my White Leghorn chickens lay yellow or tinted eggs? They used to lay white eggs but this winter they are laying a good many yellow and tinted eggs. I feed the same kind of feed this winter as I did other winters and had all white eggs.—J. F., York County, Pa.

White Leghorns of the English strain seem to produce more tinted eggs than the strictly American bred Leghorns. Usually this trouble can be controlled by rigidly culling out all tinted eggs when selecting eggs for hatching. Pullets have a tendency to produce an egg in size and color similar to the egg from which they were hatched.

When shipping to a strictly white egg market it is necessary to cull out the tinted stock to realize the best prices. A few tinted eggs in a box of white ones injure the appearance of the consignment on the market. I do not think the feed has anything to do with the color of egg shells. It has to be controlled by culling out the individual birds that manufacture the tinted shells.—R. G. Kirby.



Keeps Water Pails Clean

PANS of water set on the poultry house floor quickly become filled with dirt. The illustration shows how we overcame this trouble.

(A) is for use in the small poultry house. It is merely a box nailed against the wall, with a pail set thru a hole in the lath platform.

For the larger poultry houses (B) is the more efficient, as it holds more water. It consists of a frame of six-inch boards supported from the floor by legs, and two pails instead of one. When the benches are to be filled the pails are lifted, cleaned, filled, and replaced quickly, saving time and trouble.—A. C. W.

More about That Paying Flock

R. I. W. Goes into Detail about His Methods

Editors' Note.—Recently we re- ived a letter from J. I. A., of Berks unty, Pa., challenging the plausi- ility of the statements and figures ven by R. I. W., of Lebanon Coun- , Pa., in an article published Jan- ry 24, under the heading, "A Pay- g Flock." To clear up the matter e asked R. I. W. to give more de- ils. He has done so, and we pub- h what he has to say herewith.

CHEERFULLY comply with your request for more details and rec- ds about my chickens which have ne so splendidly. My story, "A ying Flock," is not a story of guess ork but it is the accurate result of ems kept in my journal. Many ex- astonishment at my profit be- use they usually feed poultry at a s but after I have told my meth- s, I am sure the results of my lab- will seem meager enough.

The scratch feed and growing sh I fed is a commercial, ready ixed feed which I bought at $4.00 hundred pounds. All the other rn, oats and wheat which I fed was ised on our farm and I have enter- prices for same at current mill ices, altho I had sold surplus grain much less. Take wheat and corn, example. I have invariably put wn wheat fed at $1.50 a bushel, ile I received only $1.25 for it; n I reckoned at $1.20 a bushel, ereas I sold hundreds of bushels 95c last spring.

Fair and Square Accounting

At threshing time I filled my eat bin and oat bin and at the me time I stored away old corn all which I call my chicken feed for e greater part of the year.

Now then, I call this fair and uare accounting, even if I could d rightly more than 15 per cent to total profits.

I grind and mix my own laying sh which is composed of wheat, pounds; corn, 30 pounds; oats, 60 unds; beef scrap, 30 pounds; ound alfalfa meal, 15 pounds. Salt added at the rate of almost a und per hundred pounds of mash. ve wheel barrowsful of ground estone lie at the door and all the ster shells they want are given; o many bags of fine hay from the ding entries. Chopped raw pota- s, cabbage, celery, apples and her table leavings furnish the suc- lent ration or "greens."

Only twice in my busy lifetime ve I experienced such good results h chickens with so little bother d care. When I was five years of e, my parents built "the new barn" d the new chicken quarters. Then chickens did amazingly well and this flock of mine in a new se and surroundings does equally ll. In new houses, free from dis- e germs and lice, there is scarce- any chick mortality and the eggs e in floods.

ht Pay to Burn Lousy Buildings

I sometimes think that it would to set fire to a smelly, lousy, rot- stable and build a new one. I ed all my chicks but a few which e picked to death and the one I ashed with my foot. They are too e; they are underfoot and fly on head and shoulders.

My poultry house is in the back d orchard. Here was, last spring, licious lawn grass, alsike on the l, and other tender grasses. It a surprise and delight to watch chickens eat this grass. Late in l, I stripped tender leaves and rts from the alfalfa field by the sketful and scattered in clean, tected places.

Of course, the house is sanitary. I not have a single ailing pullet s far. I mix the corn, oats and eat in the litter, give them clean h water and leave them to bal- e their own ration, which they can do better than I or any State College professor. Mash, too, is always before them.

A Leaf from the Account Book

Here is the feed they consumed from May 8, 1924, to January 1, 1925:

Growing mash	$17.66
Baby scratch feed	3.75
Cracked corn	2.00
Whole wheat	23.00
Whole corn	19.15
Whole oats	4.30
Laying mash	9.22
Also the hatching eggs	3.60
Total feed carried into house and hatching eggs	$82.68
Less surplus	2.83
Total feed consumed	$79.85
The receipts are:	
47 cockerels	$30.23
1 pullet with curved bill	.80
5 cockerels, home table	6.00
Oct., 32 eggs @ 60c doz. avg.	1.60
Nov. 259 eggs @ 60c doz. avg.	12.95
Dec. 711 eggs @ 60c doz. avg.	34.53
Total	$86.11
Less hatching eggs and feed	79.85
Profit	$6.26

With the editors' permission, I wish to add that during this last January the pullets averaged 17 eggs apiece for the month. Beef scrap was bought at $4.00 a hundred pounds. Hatching eggs were bought from my brother at a premium of 10c a dozen.—R. I. W., Lebanon County, Pa.

The Corn Situation

DESPITE an eight per cent increase in the Argentine corn acreage for the current crop year as compared with the preceding year, production under the most favorable growing conditions will not be large enough to make up the deficit in the world supply brought about by the short crop in the United States, declares the United States Department of Agriculture in an analysis of the situation.

The shortage of the corn crop of the United States together with the prospects for the new crop in Argentina are the dominating factors in the world corn situation. The final estimate of 2,437,000,000 bushels for the 1924 crop in the United States is 600,000,000 bushels less than the 1923 crop, and is the lowest estimate recorded during the past twenty years.

Produces Most of World's Corn

The United States in a good crop year accounts for about seventy per cent of the total production of corn for all countries for which statistics are available, and surpasses in quantity the combined production of corn, oats and barley of all European countries outside of Russia. This enormous production in the United States is almost entirely absorbed by the home demand. The decrease in the 1924 crop in the United States is partially offset by an increase in the crops of oats, sorghums and substitute feed, but the barley crop will not help since production is smaller than last year.

Argentina ranks second as a world producer and is especially important because the bulk of the crop is available for export. Argentina during recent years, in fact, has been the most important single source of supply for the importing countries of Europe.

The aggregate corn crop of European countries thus far reporting is somewhat above last year, but the increase is offset by decreases in the oats and barley crops of Europe as a whole, altho for the more important corn importing countries other feed crops are slightly better than the year before. Great Britain, Germany, the Netherlands and Belgium are the important corn importers.

"Better Farming; Better Business; Better Living"

Buy Federal Land Bank Bonds

BUILDING A MORE PROSPEROUS AGRICULTURE

MORE THAN 300,000 farmers are improving their farms and paying off their mortgages through the aid of Federal Land Bank Loans. They enjoy easier terms and lower interest rates. These helpful loans are made by the twelve Federal Land Banks, with combined assets of nearly $1,000,000,000. More than $45,000,000 of their capital stock has been supplied by active farmers through their farm loan associations.

Thus the twelve Federal Land Banks, with their more than 4,600 local national farm loan associations, make up the farmers' own borrowing and investment system, operating under Government supervision.

To provide funds for loaning, the Banks issue Federal Land Bank Bonds, secured by first mortgages on approved farms valued by Government appraisers at not less than double the amount of the mortgages. Every Bond is guaranteed jointly by *all* the twelve Federal Land Banks with combined capital and reserve exceeding $50,000,000. These Bonds are everywhere recognized as a standard investment security.

Every farm family can share in the benefits of this mutual system by owning Federal Land Bank Bonds. A beginning can be made with a single Bond. Denominations are $40, $100, $500, $1,000, $5,000 and $10,000. Coupon or registered form. Interest will be promptly paid twice yearly, and the principal when due. Both interest and principal are tax-free, inheritance taxes only excepted. If desired, the Bonds can be quickly sold for cash or used as security for a loan.

Federal Land Banks are located at

Springfield, Mass.
New Orleans, La.
Wichita, Kansas
St. Louis, Mo.
Berkeley, Cal.
Omaha, Nebr.
Louisville, Ky.
St. Paul, Minn.
Baltimore, Md.
Columbia, S. C.
Houston, Texas
Spokane, Wash.

Write for Federal Farm Loan Board Circular No. 16 descriptive of these Bonds, addressing nearest Federal Land Bank or the Fiscal Agent.

We Look into the Future

(Continued from page 3)

On the barn floor several machines had been set up to show what a powerful helper a small electric motor mounted on skids or on a truck can be.

One of the ten horsepower motors operated the combination feed mill which is shown at the left in the bottom picture on the first page of this issue. This machine grinds grain, corn fodder or hay; with it one can prepare almost any kind of a ration for which he has the materials. When the photograph was taken ear corn and alfalfa hay were being ground up together.

Another ten-horsepower motor, the one pictured on page three was operating an 18½-inch cylinder threshing machine. The photograph gives a good idea of the many attractive features of this portable power unit. The outfit shown was home-assembled,—the kind you would expect to find on any farm where money doesn't grow on bushes. The truck was bought in one place, the motor, the switchboard controller somewhere else.

Used in Many Ways

The wood splitter—a husky giant

Some of the other machines for use with electric motors were the one to three-horsepower feed grinder, especially adapted to the needs of poultrymen, the ensilage cutter, potato grader, concrete mixer and the hay hoist. The latter is a power windlass arrangement that takes the place of the team on the hay fork or slings and saves a lot of hitching and unhitching during the rush of haying season.

The top picture on the first page of this issue shows the five-horsepower chore motor belted to a thirty-inch woodsaw. This little power outfit was one of the neatest combinations we saw on the Electric Farm. As the photograph shows, the motor is mounted on a small hand truck with the automatic safety starter that protects it from damage by overloading and the mechanism for reducing the speed of the belt pulley. The man at the saw frame holds in his hand a small black box which is connected with the motor by a light cable. On this box are two push buttons. Push one and the motor starts; push the other and it stops. It is just as simple as that.

An Electric Ax—the Wood Splitter

Another machine that was fascinating in its demonstration of power and efficiency, was the wood splitter. It also was operated by a small electric motor. The ease and the speed with which that machine split great chunks of wood was almost uncanny, especially when you looked at the size of the motor that was running it. To everyone who knows just how tough a knotty piece of wood can be, that wood splitter,—always making a clean split in one stroke,—was a revelation.

There were several electric devices for use by poultrymen that certainly "looked good." One was the water heater that, at a cost of almost nothing, keeps the water in the drinking fountain just warm enough so it won't freeze. Then there was the electric brooder that appeared so simple you wondered why no one had thought of such a thing before, and the incubator which wasn't quite so simple. The clock controlled switch in the poultry house was ready to turn on the lights and put the hens to work long before sun-up.

The workshop had its full quota of electric drills, grinders and forge fans, and we must not forget to mention again the grindstone with a motor taking the place of the proverbial small boy.

The Water System Runs Itself

The first electrical convenience that most people install after they have put in a new lighting system is the electrically operated pressure water system. One of these outfits was installed on the Electric Farm, of course, and there was also an emergency fire fighting outfit,—a centrifugal pump operated by a three horsepower motor that could throw a large and powerful stream of water.

Probably most farmers feel that they have sufficient fire protection when they have a pressure water system and a length or two of garden hose with which to reach to the top of the barn and house. The electric pressure system is equipped with automatic control. The motor operating the pump is automatically started when the water pressure begins to get low and it shuts itself off when the pressure has been raised again to the proper point.

There is a vast difference between the old way of drawing water out of a well with a rope and bucket, and the modern way of getting it from an electric pressure system simply by turning the spigot.

But that difference seems to typify the improvement which electricity can make, and is making, in the way of living and working on a modern farm.

After all, farming is not only a business; it is also a mode of life. Anything that adds to the attractiveness of farm life is as important as something to help along the farm business. And electricity serves in both ways, as the Electric Farm proved to the satisfaction of everyone who saw it.

Pruning Demostration

A PERMANENT pruning demonstration has been started on apple trees on the farm of Wade Gregory, of Weatherly, R. D., Carbon County, by Paul Thayer, pomology extension specialist of the Pennsylvania State College. The orchard was planted twelve years ago, but due to injury by deer, the trees are about the size of three to five years old. Two rows in different parts of the orchard were selected for demonstration purposes and the trees were pruned and given proper shaping. —B.

Golden Acre Cabbage

GOLDEN ACRE cabbage, a new variety, has no equal for earliness according to W. B. Nissley, extension specialist in vegetable gardening at the Pennsylvania State College. Mr. Nissley inspected about forty fields of Golden Acre cabbage last year and found the growers so well pleased with the new variety that they are increasing their plantings this year. A limited amount of seed is available for growers of early cabbage who wish to compare Golden Acre with Copenhagen Market, Early Jersey Wakefield, or any other early variety which they may be growing. —B.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent

A Free Trial Package is Mailed to Everyone Who Writes

A. L. Rice, a prominent manufacturer of Adams, N. Y., discovered a process of making a new kind of paint without the use of oil. He named it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Write to A. L. Rice, Inc., Manufacturers, 114 North St., Adams, N. Y., and a trial package will be mailed to you, also color card and full information showing you how you can save a good many dollars. Write today.

Read What These Pennsylvania Dairymen Say About Their De Laval Milkers

—"I think the De Laval Milker is one of the most profitable machines I have installed on the farm. It is more sanitary than hand milking. I am sure that the cows like it better, and I find those that have gone through a full period of lactation have given more milk than when milked by hand." C. M. Brubaker, Lancaster

—"The De Laval Milker I bought 3 years ago is in good condition. I am milking 17 cows. My boy, 10 years old, can do the milking, outside of starting the engine. After 3 years' service I now know the De Laval Milker is worth every cent I paid for it. It takes me just 12 minutes to wash the milker each day. I have never had any trouble in keeping it clean." C. J. Landers, Cambridge Springs.

—"The De Laval Milker has given the best service and has not missed a milking since May 1920, and we have not had one case of udder or any other bag trouble whatever; not even as much as a caked quarter since we have used it. We are also using a De Laval Separator and it is giving the best of service." T. J. Messinger, Columbus.

—"I could not get along without my De Laval Milker under present conditions. Have used it for more than 2 years with perfect satisfaction. It makes milking easy; does it quickly and thoroughly. It is a time and money saver. Anyone can operate it. It is easy to keep clean. Have cleaner milk than by hand milking, and more of it." John A. Williams, Little Meadows.

—"Our De Laval Milker is working fine. On February 1st it will be 3 years since installed, and we have never missed a milking on account of the machine. It is a labor saver and I am perfectly satisfied with it." Menno J. Yoder, Meyersdale.

—"I have used the De Laval Milker for nearly 5 years. It has given me complete satisfaction and has never once failed me. I can say the De Laval Way is absolutely 'The Better Way of Milking.' It also is the 'Milker that pleases the cow,' and no dairyman can afford to be without it." Simon N. Hertzler, Mount Joy.

—"My De Laval Milker has been doing splendidly for me. It has been no trouble at all beyond wear and tear, and even that has been small considering that it is now doing its fourth year of service. It certainly has made itself a trustworthy friend." E. B. Sorrick, Williamsburg.

—"I surely couldn't praise the De Laval Milker too much, as mine has never yet given me a bit of trouble. I have had it 3 years and have never lost a milking with it yet." Richard Barrett, Wyalusing.

—"I would sooner trust the De Laval Milker than any hand milker I ever had. It produces cleaner milk, cows are more contented, and have never had sore teats as long as I have had the De Laval. I would not run a dairy without a De Laval." Wm. F. Karte, Midway.

Thousands of other De Laval Milker users are just as enthusiastic in their praise. If you are milking ten or more cows by hand you can soon pay for a De Laval in time saved, and extra milk of better quality produced. Sold on easy terms.

We Have Faith in Dairy Farmers

For nearly thirty years, dairy farmers have shown their faith in Harder Silos. Now, we are determined to show our faith in Eastern dairymen. In order that we may help them clear a profit under present conditions, we are making unusually liberal terms to any responsible dairyman.

There is no longer any need of doing without a silo or scraping along with only one when you really need two. A small down-payment will secure one, and the rest so arranged that only a little need be set aside from each milk check. The extra milk from feed now wasted will pay for your Silo.

HARDER SILOS

are equipped with the new patented Harder-Victor Front—the biggest silo improvement of recent years. You can put them up without skilled labor.

Write for our *free* book, "Saving with Silos" and particulars of our easy-payment plan. Study the strong points of Harder construction. Learn how you can make bigger profits with a better silo.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

For Lice on Cattle

Will you kindly tell me a cure for lice on cattle? I bought a few cattle off a car load shipped from Chicago and they are real lousy.—H. S., Blair County, Pa.

The use of (1) crude petroleum, (2) cottonseed oil and kerosene, equal parts, or (3) kerosene and lard mixed in the proportion of one-half pint of kerosene to one pound of lard is effective for lice when the remedy is applied by hand and the treatment repeated if necessary in about sixteen days.

These remedies may be applied with a brush or cloth. They should be distributed in an even manner going from the surface of the head and the body, including the surface of the ears, care being taken to see that there is no excess quantity at any point.—A. A. Borland.

Whitewash for Barns

Will you please give me the formula for whitewash recommended for use in dairy barns? —L. G., Tioga County, Pa.

The following formula has been recommended by the United States Department of Agriculture:

"Take a half bushel of unslaked lime, slake it with boiling water, cover during the process to keep in steam. Strain the liquid thru a fine sieve or strainer, and add to it a peck of salt previously dissolved in warm water, 3 pounds of ground rice boiled to a thin paste and stirred in while hot, one-half pound of Spanish whiting and 1 pound of clean glue previously dissolved by soaking in cold water, and then hang over a slow fire in a small pot hung in a larger one filled with water. Add 5 gallons of hot water to the mixture, stir well; let it stand a few days covered from dirt. It should be applied hot, for which purpose it can be kept in a kettle or a portable furnace. Coloring matter may be added as desired."—A. A. Borland.

The Tuberculin Test

Will you kindly give me your opinion as to whether this tuberculin test is sure-fire success? How do we really know when buying stock from a tested herd that we are really protected? Would you be so kind as to give me your opinion which I assure you will be greatly appreciated.

We are at present making a tour of Wayne County to get all the farmers to sign up to have their herds tested. We are assured that we will receive $65.00 for grade cows and $120.00 for purebred. That is the limit, but what can the lowest price be, and who appraises our cows? Is that in the hands of a professional appraiser?—Reader, Wayne County, Pa.

Nothing appears to be sure in this life except taxes and death. It must be said that the tuberculin test is not absolutely perfect and that occasionally a cow may have the disease and the fact will not be revealed by the tuberculin test. On the other hand it must also be stated that one is a great deal surer of getting a disease-free animal when purchases are made from a tested herd. One is doubly assured of this fact when he purchases animals from a state and federally accredited herd. This means that the herd has been tested at least twice at yearly periods and no reactors found.

You are correct in that the maximum amount of compensation which may be received from the state and federal government is $65.00 for a grade animal and $120.00 for a purebred. You may also receive the meat value of the carcass if it is fit for human consumption, but in no case are you allowed a recompense which is greater than ninety per cent of the market value of the animal. The amount you receive might, of course, be less than the sums mentioned if the value of the animal is not that high.

The appraisement is made by the owner and a representative of the Pennsylvania Bureau of Animal Industry. Usually this is the man who is doing the testing work. Should you not be able to agree, then the third party is usually called in to assist. I would suggest that you write directly to Dr. T. E. Munce, of the Bureau of Animal Industry, Harrisburg, for any details or information you may desire concerning the testing work.—A. A. Borland.

Progress of T. B. Work

WITH 9,000,000 cattle already under supervision for the eradication of tuberculosis, veterinary officials of the United States Department of Agriculture and the various states are making efforts to meet the continued demands for additional testing. A summary of the status of the work up to December 1 shows a waiting list of 226,534 herds containing more than 2,500,000 cattle. This list represents applications for testing in thirty-four states, the others having been able to handle the testing as fast as requested.

The states which had "clear slates" in this respect at the time the summary was prepared were: Arkansas, Delaware, Georgia, Kentucky, Louisiana, Missouri, Montana, Nevada, New Jersey, Oregon, Utah, Virginia, Washington, Wyoming, and the District of Columbia.

During November official veterinarians tested more than 50,000 herds or lots containing more than 600,000 cattle. Of this number, about 18,000 cattle reacted as tuberculous and were removed from the herds, thereby leading to the establishment of accredited herds and areas.

World Record at 16

AN INVESTMENT in a fourteen-year-old Guernsey cow may appear dubious, but Dr. George C. Russell, Willoughby, Ohio, has found it profitable. He bought the purebred Guernsey cow, Golden Kitty of Lewison 13556 at that age, and started her on advanced registry test at the age of fourteen years and 310 days. As a result of this test she produced 12,775.4 pounds of milk and 605.49 pounds of butterfat, after dropping a heifer calf.

At the end of this record, the old cow dropped twin calves, and was again started on test, at the age of sixteen years, with a resulting record of 15,450.8 pounds of milk and 753.51 pounds of butterfat. This constitutes a world's record for a Guernsey cow beginning test at the age of sixteen years or more.

Besides these two good records of her own, Golden Kitty has three daughters which have made advanced registry records,—two of them exceeding 500 pounds of butterfat.

A Pint's Not a Pound

"A PINT is a pound the world around," is a poor rule to follow when selling milk. Even a quart of water weighs more than two pounds and a quart of milk weighs more than water, points out F. C. Button, professor of dairy management at the New Jersey State College of Agriculture. Neglect of this fact means a loss of dollars to the seller.

The standard quart of milk of average composition weighs 2.153 pounds. Hence a forty-quart can of milk weighs forty times 2.153, or 86.12 pounds.

A certain farmer was delivering an average of eight cans of milk a day, or 240 cans a month, to a New Jersey milk plant. He was paid on the basis of eighty pounds per can—a loss of six pounds a can.

Short Weighting Counts Up

The milk tested four per cent fat and was sold by him for $3 per hundred pounds. It can readily be seen that this "short-weighting" of six pounds on each can amounts to 1440 pounds on a month's delivery of 240 cans. With milk selling at three cents a pound ($3 per cwt.), his total loss for the month was $43.20.

In some plants where milk is bought by the can and later converted to a weight basis, 2⅛ pounds is used as the weight of a quart and forty quarts are credited as 85 pounds.

Jersey F. B. Committee

THE Executive Committee of the New Jersey Farm Bureau Federation for 1925, comprising one member from each of the seventeen rural counties of the state, is as follows:

Atlantic, Henry Tapken of Egg Harbor Burlington, Edward E. Logan of Mt. Holly; Camden, H. H. Bell of Mt. Ephriam; Cape May, Norman Taylor of Cold Springs; Cumberland, Elmer H. Wene, of Vineland; Essex, L. C. Genung of Chatham; Gloucester, A. L. Gaventa of Swedesboro; Hunterdon, John Tine of Lebanon; Mercer, John C. Errickson of Pennington; Middlesex, David J. Perrine of New Brunswick; Monmouth, B. C. Cook of Farmingdale; Morris, A. R. Scully of Long Valley; Ocean, H. H. Ober of Lakewood; Salem, Carlton E. Moore of Daretown; Somerset, W. H. Whiton of Neshanic; Sussex, George W. VanHorn of Newton; Warren, George Edgar of Belvidere.

Centre Farm Meetings

IN CO-OPERATION with local community committees, County Agent R. C. Blaney has arranged a series of five meetings in five different communities in Centre County. These meetings started February 2 and will continue over a five-week period.

The following meetings are yet to be held:

GENTZEL'S SCHOOL.—February 16, Nicholas Schmitz, "Alfalfa and Crops"; February 23, N. S. Grubbs, "Concrete and Its Uses"; March 2, H. G. Niesley, "Marketing."

REBERSBURG.—February 17, "Alfalfa and Crops;" February 24, "Concrete and Its Uses;" March 3, "Marketing."

HUBLERSBURG.—February 18, "Alfalfa and Crops;" February 25, "Concrete and Its Uses;" March 4, "Marketing."

SPRING MILLS.—February 19, E. L. Nixon, "Potatoes and Insects;" February 26, A. A. Borland, "Dairy Improvement" (illustrated); March 5, H. G. Niesley, "Marketing."

PINE GROVE MILLS.—February "Alfalfa and Crops;" February "Concrete and Its Uses;" March "Marketing."—A. L. Beam.

FOR COWS ONLY
KOW-KARE
The Great Cow Medicine
DAIRY ASSOCIATION CO., INC.
LYNDONVILLE VT. U.S.A.
A Penny a Day Per Cow!

The Sensible Way to Get Big Milk Production

REGULAR *use of KOW-KARE invigorates the Cow's Milk-making Organs—*

How to Treat Common Cow Ailments

For your emergency guidance, keep these directions on hand:

ABORTION—Tablespoonful of KOW-KARE three times a day. First dose as a drench, following doses in grain. Continue the treatment for two weeks.

BARRENNESS—Examine womb to see whether passage is entirely clear. A tablespoonful of KOW-KARE twice a day in grain. Pursue this treatment for two weeks before service, also after. Breed her just as she is passing out of heat and with full udder.

LOST APPETITE — Tablespoonful of KOW-KARE three times a day with feed.

MILK FEVER—Four tablespoonfuls of KOW-KARE in a drench every two hours until relieved. Apply mustard and vinegar to spinal column. Use oxygen treatment if possible. After cow has been relieved give her a tablespoonful of KOW-KARE twice a day mixed with the feed.

GARGET—Give a heaping tablespoonful of KOW-KARE every morning in the feed. One tablespoonful of Grange Garget Remedy at night.

RETAINED AFTERBIRTH — Give her two tablespoonfuls of KOW-KARE morning, noon and night in a drench until afterbirth comes away. Then give her a tablespoonful of KOW-KARE in feed morning and night for three weeks.

FREE BOOK
"The Home Cow Doctor"

Let us send you our valuable treatise on cow diseases. Filled with useful hints on general dairy topics.

BUILD VIGOR

The dairy cow is a milk-making machine. The key to her producing capacity lies in a small set of digestive and milk-secreting organs. Keep these organs vigorous, and the cow will thrive on natural foods. She will milk to capacity, and resist profit-destroying diseases.

A Slight Investment that Pays a Hundred-fold

Kow-Kare is a scientific medicine-tonic. It acts directly on the digestive and milk-making organs—not with a temporary stimulating effect, but with a permanent building-up of natural vigor.

During the winter months the strain of digesting quantities of dry, rough feeds puts a severe burden upon the assimilation and milk-making functions. If the milk flow is to keep up, some medicinal assistance is needed. *Kow-Kare* is the time-tested aid—proven by over a quarter-century of success.

More Milk Assured

To maintain the summer scale of milk yield during the long winter months only a very moderate use of *Kow-Kare* is necessary—if used *regularly*. Most dairymen use a tablespoonful in the feed twice a day one week in each month. Give this plan a fair trial, and you will be surprised at the added milk-yield.

Prevent Diseases

It is cheaper to prevent than to cure disease. The action of *Kow-Kare* not only improves the milk production, but its invigorating effect enables the digestive and genital functions to resist the cow ailments that attack these organs when they become "run down."

Use *Kow-Kare* at Calving

At this period *Kow-Kare* is indispensable. Used twice a day for two or three weeks before and after, *Kow-Kare* will aid the cow to produce a healthy calf and come through without danger of the ailments so often following calving.

Let *Kow-Kare* work for you this winter; begin now and be consistent. You will see real profit results. Sold in two sizes, $1.25 and 65c, by feed dealers, general stores and druggists. If your dealer is not supplied we will mail, postpaid, on receipt of price.

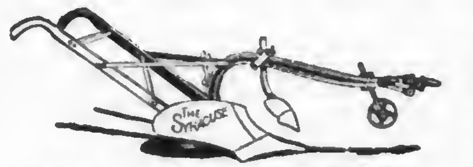
Plows That Make Good Anywhere

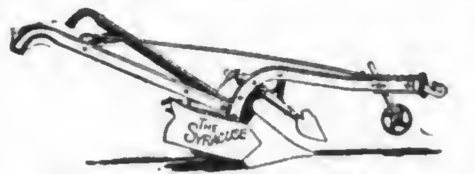
There is a John Deere-Syracuse plow for every field condition—in level land, on the hillsides—in hard, stony land or in wet, sticky subsoil, in clay loam or sod—they never fail.



John Deere-Syracuse No. 1441 Plow

For Every Soil

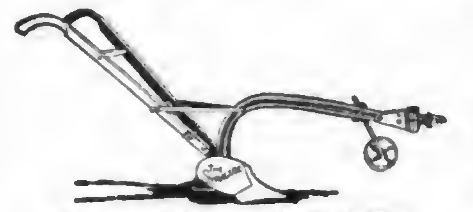
Plows of the 1441 Series represent the greatest value in walking plows offered today. They take either chilled or steel bottoms, as conditions may require in different sections. Strong, steady-running, good penetration. The latest addition to our line of walking plows.



John Deere-Syracuse Hillside Series

Best on Hillsides

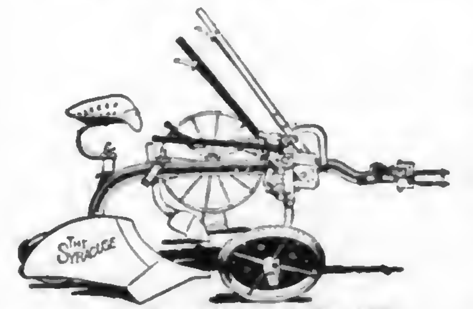
Our line of hillside plows, headed by the 821 Series, is complete and highly efficient. They do excellent work in level land as well as on hillsides. Plow body swivels on chilled bearings—release lock by touch of the toe. Nos. 226 and 236 and No. 26 are great favorites.



John Deere-Syracuse No 1459 Plow

Small But Mighty

Farmers requiring small plows will get the best results with either the No. 459 or No. 1459. The former is our smallest, lightest-draft plow, but has all the qualities of our larger plows. No. 1459 is slightly larger.



John Deere-Syracuse No. 210 Sulky Plow

Light-Draft Sulky

No plow of its type pulls lighter than the John Deere No. 210. All weight is carried on oiled bearings—rolling landside serves as third wheel. Front furrow wheel casters on turn—guides plow perfectly. Plow runs level at any depth—plows deep when turning square corners.

Go to your John Deere dealer's and select the Syracuse plow you need. Write for booklet—address John Deere, Moline, Ill., and ask for booklet HY-436

JOHN DEERE
JOHN DEERE MOLINE, ILL.
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

He Started at the Bottom

Slow but Sure Is This New Jersey Dairyman's Motto

By E. J. PERRY

IN 1897 Mr. James Lambert bought a hundred-acre farm near Lambertville, In Hunderdon County, New Jersey, at a sheriff's sale. The buildings were dilapidated and the land was greatly impoverished. Realizing the part that cows play in building up the land, Mr. Lambert secured six cows of mixed breeding known as "common stock."

These cows rarely produced more than twenty-five pounds of milk daily when fresh, and were not noted for their persistence. Mr. Lambert understood that such low production was due most largely to poor feeds and inferior blood. The only hay that could be grown was timothy mixed with red top. The grain mixture that was fed only in the winter was made up almost entirely of corn and cob meal, together with a little bran or gluten. There was considerable digestive trouble due to lack of succulence and laxativeness in the feeds. The sole roughage was corn stover and timothy hay. Two cows died from impaction of the bowels.

Silo Was First Improvement

A fourteen by thirty foot silo was built in 1908, and two years later a summer silo ten by thirty feet was erected. These have been filled every year. About the same time that the silos were built lime was applied to the fields and clover was grown without difficulty. The digestive disorders disappeared with this change in roughage. For the past few years alfalfa has been grown with success. Fifty more acres of land have been added, and today the herd numbers fourteen head of milking cows, twelve head of young stock and a herd sire.

Not Every Cow Is a Dairy Cow

With the improvement in roughage also came a revision of the grain mixture. Mr. Lambert began to use a grain ration possessing those desirable characteristics of variety, palatability, bulk and digestibility. He always tried to buy the feeds that furnished the nutrients most economically. The feeding of more protein thru the feeding of legumes and such supplementary concentrates as cottonseed meal, oil meal and gluten increased the milk flow, but not sufficiently to satisfy Mr. Lambert. He felt sure there was a difference in blood.

"Every mixed animal that is called a cow because she has four legs, an udder, a tail and a pair of horns is not a dairy cow," said Mr. Lambert. He wanted some better blood.

In 1912 a registered Holstein bull was purchased for $100 at thirteen months of age. He was a grandson of Beauty Walker Pietertje Prince, a son of Marion Walker Pietertje, one of the first cows to make thirty-one pounds of butterfat in seven days. The sire was a grandson of King Fayne Segis.

$100 Considered Extravagant Price

The bull's dam was a granddaughter of Admiral Walker Pietertje, that famous member of the Walker family that sired sixty-two A. R. O. daughters, six with records above thirty pounds of butter in seven days, thirty-five others from twenty to twenty-nine pounds, and two with yearly butter records above the 1000 pound mark.

The daughters of this purebred bull were big improvements over their scrub dams. All of them milked better than forty-five pounds daily on two milkings, and one reached sixty pounds. Four were retained for several years as good foundation grade Holsteins.

Two years after the bull was bought, Mr. Lambert purchased a three-weeks-old registered Holstein heifer for $100. At that time the spending of that amount of money for so young an animal was considered a foolish piece of business and a prodigal expenditure of funds by some of the neighbors. The calf's name was Ida Segis Fayne Pietertje. She is now ten years old. In September, 1924, with milk averaging $2.65 per hundred for the year, she finished her fifth year in the Flemington Cow-testing Association with the following record: Pounds milk, 14,203; pounds butterfat, 488; average milk test, 3.4; income over cost of feed, $281. During her milking career, which includes eight lactation periods, she has produced over 80,000 pounds of milk and 2700 pounds of butterfat, and has made a total return over feed cost of $2000. Her last year's record indicates that she should be a paying investment for several more years.

Mr. Lambert with one of his foundation cows, Topsy Edgewood Hartog De Kol, 11,589 pounds of milk and 425 pounds of butterfat in a year.

A Money Making Family

In addition to her milk production she has dropped five bull calves and three heifers. Each of these daughters has in turn had three heifer calves.

During the past year the three daughters, aged five, four and three

(Continued on page 23)

Why Strain Milk?

—with a cloth or fine mesh wire screen strainer when neither of them can possibly remove ALL the dirt from the milk? And you can't get top-notch prices for milk that is not clean.

Dr. Clark's
Purity Milk Strainer
is guaranteed to remove ALL dirt, dust, muck and other sediment from the milk—no matter how fine—or your money refunded. No other strainer made can do that.

HERE'S WHY: The Purity Strainer is fitted with a sterilized cotton pad, tightly clamped to bottom, making it necessary for milk to go THROUGH the cotton pad, which removes every particle of dirt.

PURITY Cotton Discs are made in any size from 5 1-2 in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.

Used and endorsed by Agricultural Colleges and Dairy Inspectors, Borden's, VanCamp's, Carnation, Mohawk, and Sheffield Farms Dairies.

Made in two sizes—10 quart and 18 quart. If you want clean milk, ask your dealer for the Purity Strainer, or write for circular and prices.

Purity Stamping Company
Dept. B Battle Creek, Mich.

World's Largest Manufacturers of Cotton Discs for strainers and filters.

$4.95 DOWN
Balance on easy terms that suit the pocketbook. Let your cream checks buy new Galloway Sanitary Cream Separator

Made in Four Sizes 375 to 950 lbs. skimming capacity

90 Days Trial on your own farm where you are judge and jury. Separate with a Galloway Sanitary Separator 180 times—compare it with any and all others for close skimming, for ease in cleaning, for durability, for smooth running—then if you do not think it the best separator money can buy ship it back at our expense. That is Galloway's offer to you—to show you in actual operation why the low speed bowl with separate discs and self-centering neck bearing that eliminates all vibrations, skims closer, is easier to turn and easier to clean. Why helical cut gears all running in an oil bath and highest quality materials makes the Galloway outlast two ordinary separators. Why waste cream with an old worn out separator when you can buy a Galloway for only $4.95 down and let it pay for itself. Why pay two prices for a separator when you can buy a Galloway direct from factory and save from $25 to $40.

GALLOWAY 1925 Bargain Book FREE

If you want to economize, save money and get the best, highest quality Cream Separators, Gas Engines, Spreaders, Farm Equipment and Household Necessities that money can buy, write today for this big catalog. Galloway's plan of selling direct from factory to farm gives you lowest prices on better quality equipment. For 30 years farmers have turned to Galloway for rock bottom prices. Now all Galloway resources and factories are merged together, giving new economies, new stocks, new improvements and better service than ever before. Write

For Cleaner floors with Less work

Armstrong's **Linoleum Rugs**

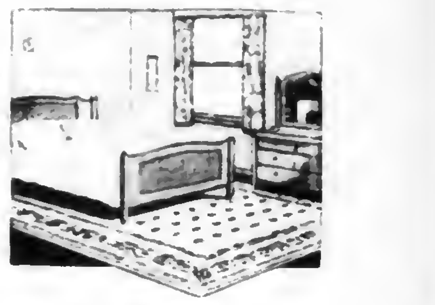
Wear longer—genuine cork linoleum clean through to the burlap back

The cost is so little

Sitting Room and Dining Room

All roads lead to the dining room and many the scuffling, soil-stained boots along the way. Three times a day a rush of feet, big and little, tracking carelessly over your floors! What more sensible, sanitary and fresh-smelling than an Armstrong's Linoleum Rug for this heavy traffic room.

"2 minutes mopping and—CLEAN!"



Bed Room and Nursery

Windows flung wide, day and night, dust settles thick on upstairs floors. How easy to keep them sanitary and clean by stroking a damp mop over an Armstrong's Linoleum Rug.

"2 minutes mopping and—CLEAN!"

Send for this Free Booklet

"RUGS OF PRACTICAL BEAUTY"

Send for this book of colorplates today. It tells you what you can do right now to make your floors attractive at low cost and how you can *keep* them attractive with far less work. Send for it today. It's *free.*

"If I were just an old drudge it might be different

—but I just can't keep on giving these sunshiny afternoons of my youth to ungrateful old floors. Surely there must be some easier-to-clean floor covering."

Armstrong's Linoleum Rugs *are* easier to clean. "2 minutes mopping and—CLEAN!" And they *stay* clean longer because an Armstrong Rug is always solid, genuine cork linoleum, clear through to the burlap back.

You just *can't* dislodge ground-in soil from a floor surface that splinters and chips off into pits and jagged hollows, without going back—hands and knees—to the old-fashioned, back-breaking scrubbing brush. So let's forget that once and for all and get an ARMSTRONG Rug.

ARMSTRONG CORK COMPANY

Double Protection

Two big features which mean weeks of extra wear for "U

Rugged Reinforcements

If you cut through the wall of a "U. S." Boot, you'll find *from 4 to 11 separate layers* of rubber and fabric—as shown in the magnified view above.

These strong reinforcements guard against breaks.

Live, Elastic Rubber

If you cut a strip of rubber from a "U. S." Boot, you'd find it would stretch more than five times its length—and snap back into place every time, like an elastic band.

It's this live, elastic rubber that explains why "U. S." Boots and Overshoes stand repeated bending and wrinkling—and stay waterproof.

These two big features—live, elastic rubber, and layer on layer of reinforcements guard the life of "U. S." Boots and Overshoes. They protect against destructive bending and wrinkling—against the knocks and strains that shorten the life of ordinary boots and overshoes.

No wonder farmers everywhere are finding that "U.S." means longer wear!

You'll find every type of rubber footwear in the big "U. S." line. Ask for "U. S."

for ROOFS

Be Your Own Judge!

Get the *facts* in the case before you spend a cent for roofing. Put Beaver Vulcanite on the stand. Examine it and cross-examine it. Bring out all the evidence concerning its quality. Make this roofing *prove* its durability beyond a reasonable doubt. This is the only way you can be sure of doing justice to your money and your property.

Send for a free sample of Beaver Vulcanite Roofing. Give it these 6 Daring Tests—the "third degree" for roofing quality. Twist it; bend it. Make it prove that it is strong and tough. Throw it on the floor; kick it; scuff it. Make it demonstrate that its slate surface is firmly embedded in its asphalt. Put it on ice; then pour hot water on it. Make it show you that temperature changes will not harm it. Soak it in water. Make it convince you that it is water-proof. Leave it on a hot radiator. Make it prove that it won't run or dry out under summer's sun. And, last, put burning embers on this sample of Beaver Vulcanite. Make it establish itself as a fire-safe roofing. Then, be your own judge.

Decide now to defend yourself against the waste and damage of a roof that will crack, peel, blister or curl on your buildings. Send the coupon now for your sample of Beaver Vulcanite Roofing. Arrive at your verdict through the *facts* of roofing quality.

WILLYS-KNIGHT

New Distinction - New Beauty - New Luxury - and
NO VIBRATION *at any Speed*

HERE is Distinction further distinguished — the new, improved Willys-Knight Sedan. Beauty has been added to beauty. Luxury has been added to luxury. Power has been added to power. A great car made greater!

Longer, lower, lovelier lines. The radiator is narrower and slightly higher to give the new Willys-Knight that aristocratic sleekness so marked in the best and costliest cars of Europe. A double beading at the waistline of the body makes the new Willys-Knight look longer and smarter. Heavier crown fenders and Fisk balloon tires add the final rich touch to a picture of richness.

Inside, the new Willys-Knight Sedan is all luxury and hospitality. The seats have been made wider to give all five passengers the very limit of comfort. The deep, soft cushions fairly embrace you. The upholstery and interior fixtures are in perfect harmony with high desire and good taste.

And even the Willys-Knight sleeve-valve engine itself has been improved. No fundamental changes have been made — just a number of small, but important, engineering refinements that make all the famous advantages of the Willys-Knight engine even *more* advantageous.

This is the only engine in the United States that is equipped with the new Lanchester Balancer, a unique invention that gives Willys-Knight complete freedom from the engine vibration so common in motor cars. This also is the only type of engine that *improves with use*. And the only type of engine that never needs carbon-cleaning. And the only type of engine that never needs valve-grinding!

More than ever is the Willys-Knight the kind of a car cherished by people who know the wisdom and economy of buying quality. Here is beauty, luxury and *trustworthiness* — all on the same four wheels!

WILLYS-OVERLAND, INC., TOLEDO, OHIO
WILLYS-OVERLAND SALES CO. LTD., TORONTO, CANADA

He Started at the Bottom

(Continued from page 18)

years, respectively, have made the following records: Pounds of milk, 13,627, 11,389 and 9334; pounds of butterfat, 468, 373 and 366; income above cost of feed, $241, $196 and $201.

Some of the granddaughters have freshened recently, and are also proving their worth. Assuming for the sake of illustration that this foundation cow's twelve female descendants (daughters and granddaughters) that are now in the herd will each prove to be only three-fourths as valuable from a production standpoint for nine years as she herself, the total income over feed from all of them, including the old cow, will amount to $20,000. Mr. Lambert has added a few purebreds to his herd in addition to those raised. All animals in the herd are now registered.

Herd Average Above 10,000 Pounds

Eight head have been officially tested, and the herd has been in the testing association for five years. Of the official records three exceeded 500 pounds of milk in seven days. The records revealed by the last testing association book are as follows: Yearly average per cow, 10,439 pounds milk; 372 pounds butterfat; $191 above cost of feed.

Each year the Extension Service of the New Jersey State Agricultural College awards Certificates of Merit to all cows in the testing associations that produce 350 pounds of butterfat as heifers, or 400 pounds of butterfat when starting on test at five years of age or more. For the year just closing, there are nine cows in the Lambert herd that will receive certificates.

"The cowtesting association has always enabled me to know just how each cow stands in relation to all of the others," says Mr. Lambert. "To know how much every cow milks daily makes it easier to feed right. Twenty-five years ago I fed all cows about the same amounts of grain. We didn't weigh the milk, and there was no testing association. The money came in slowly."

Free from Tuberculosis

In 1919 the herd was put under State and Federal supervision for the eradication of tuberculosis. There was not a reactor on the first test, but one was lost on the second. Since that time the herd has been clean. A healthy herd and records of production have made it easy for Mr. Lambert to find a ready sale for surplus stock. In 1919 one cow was sold in the New Jersey State Holstein Sale for $510.

In reviewing with Mr. Lambert his experiences of the past twenty-seven years, it was apparent that the "sailing was rough" at times. Many obstacles had to be overcome. The labor problem was usually begging for solution, the market was sometimes uncertain, and the desired feeds were not always available. The health of each cow had to be safeguarded, and her physical condition constantly watched.

In studying the development of a herd such as this, the old illustration of how milk production can be likened to a four-legged milk stool comes to mind. The names of the four legs are feeding, breeding, weeding and health. When any one leg is impaired and weakened, the stool does not function properly, and he who sits thereon will sooner or later find himself suffering.

1/3 of a Silo of Corn for $1.50

Up in Remsen, N. Y., Webb A. Browne & Son plant about 7 acres of corn, to fill a 30 x 18 ft. silo. They were troubled with crows, and looked around for something that would rid them of the loss they suffered each year from crows and other pests. So they tried Stanley's Crow Repellent. And this is what they write us:—"No more trouble with crows. Would not plant corn without it. The crows never light on the field after they have tried it. Saves us from 1/3 to ½ of the crop. Crow Repellent banishes the bugbear of replanting. And if a certain acreage will fill your silo, you don't have to plant from 1/3 to ½ more to cover the loss by crows."

Think of it! From 1/3 to ½ of your corn crop saved by expending only $1.50 for a can of Stanley's Crow Repellent! And more than that, they save the time they formerly wasted in having to plant over again. And a farmer's time at planting season is worth MONEY! Mr. Browne further says:—"It is my personal opinion that seed corn treated with Stanley's Crow Repellent showed a higher per cent germination."

We are willing to let the corn-raisers themselves write our advertisements for us. Read these:

"I gave Stanley's Crow Repellent a trial last year. Corn is so easily treated with it. A small quantity can be quickly stirred through, so that it covers every kernel. And it positively will not clog the planter. I used it on the most remote parts of two corn fields extending in opposite directions from my buildings. Parts nearest my dwelling were planted with untreated corn. The crows found the parts that were planted with untreated corn. They pulled on this next to the treated corn where they were as far away from the buildings as they could get. No treated corn worth mentioning was pulled". Wm. J. Bernhoft, RFD 1, Salamanca, N. Y.

"I counted 1290 crows flying over my corn pieces in an hour last year on their way to the woods where they roosted each night. They only pulled up two hills. This is not written for a testimonial, but just to prove that you helped me, and I am willing to return the favor". (From a Vermont farmer).

"I am used to having lots of corn pulled, but this year after using your Crow Repellent only four or five hills were pulled." Simon Merrihew, Olivebridge, N. Y.

"Used Repellent last season," also threw some corn over top of the ground after planting. Did not find any hill pulled up, and we had thousands of crows in this vicinity. Use this testimony if you wish. I recommend Stanley's Crow Repellent to anyone who raises corn". S. P. Siegars, RFD 1, Cedar Grove, Me.

"I used Stanley's Crow Repellent with excellent results last season. Not a hill pulled". F. A. Browning, Rowe, Mass.

"I lost three hills of corn on 3 acres. Could not find any more. Crows on the piece all the time. Never drove them off once. Stanley's Crow Repellent is very easy to apply. Does not hurt the planter, and I believe the corn does better. I shall never plant a hill of corn again without it if I can get it at any price." E. G. Palmer, Kent's Hill, Me.

THAT'S THE CAN THAT LOST ME MY HAPPY CORNFIELD HOME

Stanley's
Crow Repellent

Below are more testimonials, every one with the name and address of the corn-raiser who swears by Stanley's Crow Repellent. And if you are not convinced, after reading these, then ask us to mail you a copy of nearly a hundred more testimonials, every one with name and address, so that you can write to them, and ask them yourself what they think of Stanley's Crow Repellent.—

Prices:

Large can, enough for 2 bu. of seed (8 to 10 acres), $1.50. Half size can, $1.00. If your hardware, seed or drug store does not have it in stock, order direct from us.

"Crows will not pull corn where it is used," says W. J. Holt, Milan, N. H.

"Would not plant corn without it," writes G. Page, Gilmanton Iron Works, N. H.

"Only 4 or 5 hills pulled," is the good word from E. Elsworth, Lake George, N. Y.

"Crows gave it up as a bad job, and tackled my neighbor's," says Dr. Rea, Harbert, Mich.

"Planted 80 acres, and they sure did leave it alone," writes Charles Bowman, Beardstown, Ill.

"Did not take a stalk that I saw," is the welcome word from H. O. Miller, Lucas, Iowa.

Stanley's Crow Repellent certainly is wonderful. The crows did not pull up one hill of corn in a field of about one and a half acres. G. Post, Dover, Mass.

I never would plant corn without using it. W. Nash, Mt. Kisco, N. Y.

The Crow Repellent you have is the only kind that I have used with complete success. S. Shepherd, West Townsend, Mass.

I was well pleased with it and have recommended it to others. I. Padgett, Holmesville, N. Y.

Your Crow Repellent is well worth the price. Some of my neighbors have some of their fields all destroyed. W. J. Wilson, Elmore, Mich.

I used the Crow Repellent you sent me. Planted 34 acres of corn with very good results. The crows would light on the fields but did not pull any corn. Wellington Bergy, Caledonia, Mich.

I know a crow will not touch one spear after STANLEY'S Treatment. G. R. Kales, Tunnels, N. Y.

STANLEY'S CROW REPELLENT SAVES REPLANTING
CEDAR HILL FORMULAE CO NEW BRITAIN CONN. U.S.A.

YOUR MONEY BACK!

We know just how Stanley's Crow Repellent will rid you of the crow nuisance. But, if you are not willing to take either our word for it, or if you doubt the truth of these unsolicited letters from corn-raisers who have tried it out and KNOW, then we are willing to back up our faith in it by as liberal guarantee as was ever made by any concern. If Stanley's Crow Repellent does not do exactly what we claim it will do, then we will gladly refund you what you paid for it. You are to be the sole judge! Could any concern be fairer than that?

And more than that, they save the time they formerly wasted in having to plant over again. And a farmer's time at planting season is worth MONEY! Mr. Browne further says:—"It is my personal opinion that seed corn treated with Stanley's Crow Repellent showed a higher per cent germination."

We are willing to let the corn-raisers themselves write our advertisements for us. Read these:

"I gave Stanley's Crow Repellent a trial last year. Corn is so easily treated with it. A small quantity can be quickly stirred through, so that it covers every kernel. And it positively will not clog the planter. I used it on the most remote parts of two corn fields extending in opposite directions from my buildings. Parts nearest my dwelling were planted with untreated corn. The crows found the parts that were planted with untreated corn. They pulled on this next to the treated corn where they were as far away from the buildings as they could get. No treated corn worth mentioning was pulled". Wm. J. Bernhoft, RFD 1, Salamanca, N. Y.

"I counted 1280 crows flying over my corn pieces in an hour last year on their way to the woods where they roosted each night. They only pulled up two hills. This is not written for a testimonial, but just to prove that you helped me, and I am willing to return the favor". (From a Vermont farmer).

"I am used to having lots of corn pulled, but this year after using your Crow Repellent only four or five hills were pulled." Simon Merrihew, Olivebridge, N. Y.

"Used Repellent last season," also threw some corn over top of the ground after planting. Did not find any hill pulled up, and we had thousands of crows in this vicinity. Use this testimony if you wish. I recommend Stanley's Crow Repellent to anyone who raises corn". S. P. Siegars, RFD 1, Cedar Grove, Me.

"I used Stanley's Crow Repellent with excellent results last season. Not a hill pulled". F. A. Browning, Rowe, Mass.

"I lost three hills of corn on 3 acres. Could not find any more. Crows on the piece all the time. Never drove them off once. Stanley's Crow Repellent is very easy to apply. Does not hurt the planter, and I believe the corn does better. I shall never plant a hill of corn again without it if I can get it at any price." E. G. Palmer, Kent's Hill, Me.

THAT'S THE CAN THAT LOST ME MY HAPPY CORNFIELD HOME

Stanley's
Crow Repellent

Below are more testimonials, every one with the name and address of the corn-raiser who swears by Stanley's Crow Repellent. And if you are not convinced, after reading these, then ask us to mail you a copy of nearly a hundred more testimonials, every one with name and address, so that you can write to them, and ask them yourself what they think of Stanley's Crow Repellent.—

"Crows will not pull corn where it is used," says W. J. Holt, Milan, N. H.

"Would not plant corn without it," writes G. Page, Gilmanton Iron Works, N. H.

"Only 4 or 5 hills pulled," is the good word from E. Elsworth, Lake George, N. Y.

"Crows gave it up as a bad job, and tackled my neighbor's," says Dr. Rea, Harbert, Mich.

"Planted 80 acres, and they sure did leave it alone," writes Charles Bowman, Beardstown, Ill.

"Did not take a stalk that I saw," is the welcome word from R. O. Miller, Lucas, Iowa.

Stanley's Crow Repellent certainly is wonderful. The crows did not pull up one hill of corn in a field of about one and a half acres. G. Post, Dover, Mass.

I never would plant corn without using it. W. Nash, Mt. Kisco, N. Y.

The Crow Repellent you have is the only kind that I have used with complete success. S. Shepherd, West Townsend, Mass.

I was well pleased with it and have recommended it to others. I. Padgett, Holmesville, N. Y.

Your Crow Repellent is well worth the price. Some of my neighbors have some of their fields all destroyed. W. J. Wilson, Elmore, Mich.

I used the Crow Repellent you sent me. Planted 34 acres of corn with very good results. The crows would light on the fields but did not pull any corn. Wellington Bergy, Caledonia, Mich.

I know a crow will not touch one spear after STANLEY'S Treatment. G. R. Kales, Tunnels, N. Y.

Prices:

Large can, enough for 2 bu. of seed (8 to 10 acres), $1.50. Half size can, $1.00. If your hardware, seed or drug store does not have it in stock, order direct from us.

SAVE THE UDDER

If there be caking, congestion or inflammation of your cows' udders

USE
Trade ANTICAKE Mark

This takes the cake out of the bag. Udder disease is a dairyman's constant worry. Because a temporary affliction means immediate loss; a permanent disability may mean loss of the whole animal. Protect your investment and save the udder by providing in your barn ANTICAKE, the Wondrous healing ointment. The minute you notice the least soreness in the Udder, apply ANTICAKE and be safe. CURES MANY CASES OF CHRONIC UDDER TROUBLES. Wise dairymen always use it continually before freshening, particularly with heifers having first calf.
SOLD ON POSITIVE GUARANTEE—if it shouldn't help there is no charge. One pound box $1, three boxes $2.90, five boxes $4.50—All prepaid.

INTENTIONAL 2ND EXPOSURE

BUDDY BOOT

THE boot illustrated is the Top Notch Buddy, the famous boot with the muscles. If you want a boot that will wear like iron without being heavy or clumsy, ask for the Top Notch Buddy and see that you get it.

Tested—
for long hard service

UNDER the hardest possibie wearing conditions, test pairs of Top Notch Rubber Footwear are thoroughly tried out. We make sure in advance by *actual service tests* that the construction and workmanship will stand hard knocks. We give them a worse punishment than you ever will.

Then when these test pairs have made good and proved that they will still be giving service when ordinary rubber footwear is worn out, *every single pair* of that particular style or kind of Top Notch Rubbers, boots or arctics, in future, is made with the same exacting care.

All materials—rubber, canvas or linings—have special qualities for toughness, elasticity or appearance. We make each pair by hand from start to finish—the workmanship is never skimped or hurried.

Make sure of *tested service* in your rubber footwear by looking for the Top Notch Cross on the soles. All styles and all sizes for men, women and children—boots, arctics, heavy and light rubbers.

The best stores carry Top Notch Rubber Footwear or will be glad to get it at your request.

RADIO EXPERIENCES

You Are Missing a Lot If You Don't Have a Receiving Set, These Women Say

IF YOU have any idea that it is only the men and the boys on the farms who enjoy the family radio set, perish the thought, for the women think just about as much of it as do the men, if not more.

Some letters have come to us recently from farm women, telling about their experiences with radio. One woman, Mrs. H. F. Graham, writes: "Never before have I enjoyed our radio set so much as I did last night. We have been hearing a great many stations since we installed the set two years ago, but the program which was broadcast from a St. Louis station last night was the best we have ever heard. We listened to Cerena Van Gordon, of the Chicago Civic Grand Opera Company, as she gave a program at the Odeon Theatre in St. Louis.

Can Afford Fine Music Now

"We are great lovers of music and when we lived in Chicago some years ago we never felt that we could afford to attend grand opera, but thanks to our radio set we were able to sit in the comfort of our own fireside and listen to this wonderful singer.

"We would have missed all of the political campaign speeches this year if we had not had our radio set, which brought us many excellent things during the campaign. We heard the words of every speaker at the national conventions and were always amused when Alabama went twenty-four for Underwood. We heard President Coolidge's first message to Congress and enjoyed that very much.

"Aside from the entertainment, which keeps us all better informed, we receive and profit by the daily market reports on livestock and grain and we have become the official timekeepers for our immediate neighborhood because we get the time direct from Arlington."

Shut-in Enjoys Church Services

Another farm woman, Mrs. Henry F. Knoke, says: "The radio means much to us. We are farmers and when our day's work is done we gather around the radio set and listen to good talks of interest and to splendid music. As I am almost a shut-in at times because of rheumatism, and as we live six miles from a church, I can sit down in my own home and hear the Word of God. The radio is not alone a wonderful invention, but affords a world of pleasure and instruction."

Mrs. C. L. Atchison goes a little farther in placing a value on her radio set. She says in part, "Our radio set is home-made and looks a bit crude, but I wouldn't part with it as soon as I would my power washer."

Darns Socks to Radio Music

She says further, "It means, for one thing, many pleasant evenings that would be long and dull without it. We live on a farm and it is impossible to get to church every Sunday, but we can always have our Sunday sermon at home. Last fall we heard the reports of the World Series baseball games and most of the national campaign speeches.

"There is such a wide variety of entertainment. If you do not feel in the mood for classical music there is always plenty of popular music on tap. Last winter I listened to a play, 'Turn to the Right,' which I had long wanted to see. I couldn't see it by radio, but I heard every word of it and enjoyed it almost as much as if I had been in the theatre. My little boy enjoys the bed time stories.

"I have done any amount of mending to the tune of some good orchestra in a distant city and the task was made lighter by far."

Our Fireproof Garage

FOR years I felt the need of a good garage, as we had our tractor, truck and touring car in a shed of the barn. My conscience never was at ease because of possible fires from various causes. So last summer we built a fire-proof garage some distance from the barn and house and yet at a convenient place.

As we have plenty of timber on the farm, also a good saw mill with water power, the lumber did not cost any money, nor the labor much, as we did it mostly with our regular farm help except one day a few carpenters. Dimensions are thirty-six feet by twenty-four feet by eight feet high. The roof has a small pitch, ridge being only two and one-half feet high. We used guaranteed roofing, concrete floor, and sides of that popular stucco.

Stucco Made Attractive Finish

We sawed the lathes ourselves and nailed them. Then we got an expert to put stucco on. It took three men only seven hours to finish about 800 square feet.
